The samples for inspection must be collected by a fish health inspector or a fish collector in cooperation with the producer. Testing of samples must be done by an approved laboratory.

(b) The inspection for viral hemorrhagic septicemia (VHS), infectious pancreatic necrosis (IPN), and infectious hematopoietic necrosis (IHN) in salmonids and for VHS in nonsalmonids must include at least a minimum viral testing of ovarian fluids at the 95 percent confidence level of detecting two percent incidence of disease ~~(ovarian fluids must be sampled for certification of viral hemorrhagic septicemia and infectious hematopoietic necrosis). Bacterial diseases must be sampled at the 95 percent confidence level with a five percent incidence of disease. The inspection must be performed by a fish health inspector in cooperation with the producer with subsequent examination of the collected tissues and fluids for the detection of certifiable diseases.~~
