

**7011.0735 TABLE 2.**

| Source Gas Volume, DSCFM <sup>a</sup> | Concentration GR/DSCF <sup>b</sup> |
|---------------------------------------|------------------------------------|
| 7,000<br>or less                      | 0.100                              |
| 8,000                                 | 0.096                              |
| 9,000                                 | 0.092                              |
| 10,000                                | 0.089                              |
| 20,000                                | 0.071                              |
| 30,000                                | 0.062                              |
| 40,000                                | 0.057                              |
| 50,000                                | 0.053                              |
| 60,000                                | 0.050                              |
| 80,000                                | 0.045                              |
| 100,000                               | 0.042                              |
| 120,000                               | 0.040                              |
| 140,000                               | 0.038                              |
| 160,000                               | 0.036                              |
| 180,000                               | 0.035                              |
| 200,000                               | 0.034                              |
| 300,000                               | 0.030                              |
| 400,000                               | 0.027                              |
| 500,000                               | 0.025                              |
| 600,000                               | 0.024                              |
| 800,000                               | 0.021                              |
| 1,000,000<br>or more                  | 0.020                              |

Interpolation of the data in this part for airflow rates between 7,000 dscfm and 1,000,000 dscfm must use the equation:

$$c = 1.7627 \times FR_{\text{corrected}}^{-0.3241}$$

where:

c = concentration limit in gr/dscf

FR<sub>corrected</sub> = gas volume in dscfm

<sup>a</sup>Dry standard cubic feet per minute

<sup>b</sup>Grains per dry standard cubic foot.
