

CHAPTER 7081
MINNESOTA POLLUTION CONTROL AGENCY
MIDSIZED SUBSURFACE SEWAGE TREATMENT SYSTEMS

- 7081.0010 PURPOSE AND INTENT.
- 7081.0020 DEFINITIONS.
- 7081.0040 STATE REGULATION.
- 7081.0050 FEDERAL REGULATION.
- 7081.0060 LOCAL REGULATION.
- 7081.0070 VARIANCE PROCEDURES.
- 7081.0080 PERFORMANCE AND COMPLIANCE CRITERIA.
- 7081.0100 PROFESSIONAL REQUIREMENTS.
- 7081.0110 SEWAGE FLOW DETERMINATION.
- 7081.0120 DESIGN FLOW DETERMINATION FOR DWELLINGS.
- 7081.0130 FLOW AND WASTE CONCENTRATION DETERMINATION FOR OTHER ESTABLISHMENTS.
- 7081.0140 INFILTRATION.
- 7081.0150 NECESSITY OF SOIL AND SITE EVALUATIONS.
- 7081.0160 PRELIMINARY EVALUATION.
- 7081.0170 FIELD EVALUATION.
- 7081.0180 SOIL INTERPRETATION FOR SYSTEM DESIGN.
- 7081.0190 SITE PROTECTION.
- 7081.0200 SOIL AND SITE REPORT.
- 7081.0210 GROUNDWATER INVESTIGATION.
- 7081.0230 DESIGN STANDARDS.
- 7081.0240 SEWAGE TANKS.
- 7081.0250 DISTRIBUTION OF EFFLUENT.
- 7081.0260 DOSING OF EFFLUENT.
- 7081.0270 FINAL TREATMENT AND DISPERSAL.
- 7081.0275 COLLECTION SYSTEMS.
- 7081.0280 CONSTRUCTION REQUIREMENTS.
- 7081.0290 OPERATION AND MAINTENANCE.
- 7081.0300 SYSTEM ABANDONMENT.

7081.0010 PURPOSE AND INTENT.

A. The proper location, design, installation, use, and maintenance of midsized subsurface sewage treatment systems (MSTS) protects the public health, safety, and general welfare by the discharge of adequately treated sewage to the groundwater. In accordance with the authority granted in Minnesota Statutes, chapters 103F, 103G, 115, and 116, the Pollution Control Agency, hereinafter

referred to as the agency, provides minimum environmental protection standards for MSTs as defined in this chapter.

B. These standards shall be adopted countywide and administered and enforced by local units of government as directed by chapter 7082 and Minnesota Statutes, section 115.55.

C. This chapter does not regulate subsurface treatment systems that do not receive sewage as defined in this chapter. If systems regulated under this chapter receive both sewage and nonsewage, the requirements of this chapter apply, plus any additional requirements governing the nonsewage portion of the wastewater. Systems serving two or more dwellings, systems serving other establishments that serve over 20 persons, and systems receiving nonsewage are also regulated under Code of Federal Regulations, title 40, parts 144 and 146.

D. This chapter does not contain design standards for sewage treatment systems that discharge to the ground surface or surface waters. Those systems require a national pollution discharge elimination systems permit.

E. Primarily, this chapter provides measurable performance outcomes for MSTs, but this chapter also includes limited design, construction, inspection, and operational standards that are believed to reasonably protect surface water, groundwater, public health, safety, general welfare, and the environment.

F. In conjunction with these standards, the agency encourages the use of advanced treatment methods and waste reduction to further reduce the discharge of contaminants.

G. Other chapters that have a bearing on MSTs are standards for individual subsurface sewage treatment systems in chapter 7080, administrative requirements for subsurface sewage treatment systems local permit and inspection programs in chapter 7082 and certification and licensing requirements for those who design, install, inspect, maintain, or operate subsurface sewage treatment systems and product registration in chapter 7083.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400*

Published Electronically: *January 22, 2021*

7081.0020 DEFINITIONS.

Subpart 1. **Certain terms.** In addition to the definitions in chapters 7080, 7082, and 7083 and Minnesota Statutes, section 115.55, which are incorporated by reference, the terms used in this chapter have the meanings given them. For the purposes of this chapter, if a term used in this chapter is defined in chapter 7080, 7082, or 7083, it shall apply to MSTs and other SSTs if referenced in later chapters. Certain terms or words used in this chapter must be interpreted as follows: the words "shall" and "must" are mandatory and the words "should" and "may" are permissive. All distances specified in this chapter are horizontal distances unless otherwise specified.

Subp. 2. [Repealed, 38 SR 1001]

Subp. 3. **Groundwater mound.** "Groundwater mound" means the rise in height of the periodically saturated soil or regional water table caused by the addition of sewage effluent from a subsurface sewage treatment system into the soil.

Subp. 4. **Midsized subsurface sewage treatment system or MSTs.** "Midsized subsurface sewage treatment system" or "MSTs" means a subsurface sewage treatment system, or part thereof, as set forth in Minnesota Statutes, sections 115.03 and 115.55, that employs sewage tanks or other treatment devices with final discharge into the soil below the natural soil elevation or elevated final grade and that is designed to receive sewage design flow of greater than 5,000 gallons per day to 10,000 gallons per day.

MSTs also includes sewage collection systems and associated tanks that discharge into MSTs treatment or dispersal components. MSTs does not include those components defined as plumbing under the Minnesota Plumbing Code, chapter 4714, except for a building sewer connected to a subsurface sewage treatment system.

Subp. 5. **NPDES permit.** "NPDES permit" means a national pollutant discharge elimination system permit issued by the agency.

Subp. 6. **Other establishment.** "Other establishment" means any public or private structure other than a dwelling that generates sewage that discharges to an SSTS.

Subp. 7. **SDS permit.** "SDS permit" means a state disposal system permit issued by the agency.

Subp. 7a. **SSTS with low impact to potable water.** "SSTS with low impact to potable water" means an SSTS that is designated by an individual licensed by the Board of Architecture, Engineering, Land Surveying, Landscape Architecture, Geoscience, and Interior Design who has determined that the groundwater plume from a soil dispersal component:

A. is discharging into a surface water bordering the property the SSTS soil dispersal component is located on; and

B. is not discharging into the capture zone of any existing or potential water supply wells.

Subp. 8. **Well capture zone.** "Well capture zone" means the surface and subsurface area that supplies water to a water supply well.

7081.0040 STATE REGULATION.

Subpart 1. Agency regulation.

A. All MSTs must be designed and operated according to this chapter, except as modified through an ordinance in compliance with chapter 7082 and Minnesota Statutes, section 115.55. All MSTs must be designed, installed, inspected, pumped, and operated by a qualified employee under

part 7083.1010 or a licensed business under part 7083.0710. All MSTs must conform to applicable state statutes and rules.

B. The owner or owners of an SSTS must obtain an SDS permit from the agency according to chapter 7001 when:

(1) a single proposed or existing soil dispersal area receives a flow greater than 10,000 gallons per day; or

(2) all proposed and existing SSTS soil dispersal areas that are under common ownership and within one-half mile of each other have a combined flow greater than 10,000 gallons per day. Flow from an SSTS with low impact to potable water is not counted in this subitem.

C. An SDS permit is required for any subsurface sewage treatment system or group of subsurface sewage treatment systems that the commissioner determines has the potential or an increased potential to cause adverse public health or environmental impacts if not regulated under a state permit. Conditions for these permits include systems in environmentally sensitive areas, unsubstantiated or unexpected flow volumes, and systems requiring exceptional operation, monitoring, and management.

D. If flow values, as determined according to part 7081.0110, are greater than 10,000 gallons per day but an SDS permit is not required because of subpart 1a, item B, flow measurement data generated for making that determination must be submitted to the commissioner for review before a local permit is issued. Information on all subsequent alterations to the flow must also be provided to the commissioner.

Subp. 1a. **Flow determination.** The owner or owner's agent must determine flow according to this subpart to establish whether an SDS permit is required under subpart 1, item B.

A. For new SSTS and expansions to existing SSTS, the flow must be determined according to item C.

B. For existing SSTS, except as provided under item D, the flow is determined:

(1) by calculating the average of the maximum measured daily flow for a consecutive seven-day period when the following measurements are recorded and used in the calculation:

(a) 90 consecutive daily flow measurements capturing the maximum use. Measurements must be corrected for occupancy or use according to Prescriptive Designs and Design Guidance for Advanced Designers, incorporated by reference under part 7080.1550, subpart 2; and

(b) 40 additional, consecutive, weekly flow measurements validating that unit (a) captured the maximum use; or

(2) according to item C.

C. When determined according to this item, flow is calculated according to part 7081.0110. The highest calculated value of the various methods in Table I under part 7081.0130, subpart 1, must be used to make the determination, with no reduction allowed. An SDS permit is not required

if a factor of safety is added to the design flow that results in a design flow that exceeds the SDS permit threshold.

D. Campgrounds and resorts existing as of June 14, 2015, that are open 180 days per year or less must determine flow in accordance with this item or item A or B.

- (1) Flow measurements must be taken only from:
 - (a) a sewage lift station pump with a runtime meter and counter;
 - (b) a sewage flow meter;
 - (c) flow meters on wells; or
 - (d) a water softener system with flow measurement when the measurement includes all flow to the subsurface soil treatment system, including backwash.
- (2) Flow measurement devices must be calibrated before start-up of monitoring and must undergo an additional calibration during the measurement period to verify results.
- (3) The daily flow rate and daily occupancy rate must be recorded for a minimum of two weeks centered on and including July 4. Weekly measurements must also be done for an additional, continuous two weeks before and two weeks after July 4.
- (4) Flow measurements must be divided by the percent occupancy expressed as a decimal percent.
- (5) Flow extrapolation from systems not measured is allowed as follows:
 - (a) flow may be extrapolated only if fewer than 25 percent of the systems are not measured;
 - (b) the systems measured must serve at least 75 percent of the occupancy of the campground or resort; and
 - (c) flow extrapolation is not allowed between other campgrounds and resorts.
- (6) If no flow data exist, the owner or operator of the campground or resort must implement an acceptable flow measurement plan and start measuring and recording flow data within 120 days of notification. An acceptable flow measurement plan is a plan, verified by the agency, conforming to subitems (1) to (5).
- (7) All flow measurement data generated from the flow measurement plan must be submitted to the commissioner within 30 days of the last measurement.

Subp. 2. Other state regulations.

- A. MSTs must conform to all applicable state statutes and rules.
- B. MSTs serving establishments licensed or regulated by the state of Minnesota, or MSTs owned by the state of Minnesota, must conform to this chapter.

Statutory Authority: *MS s 115.03; 115.55; L 2015 1Sp4 art 4 s 144*

7081.0050 FEDERAL REGULATION.

A. All subsurface sewage treatment systems serving two-family dwellings or larger and systems serving other sewage generating establishments that serve more than 20 people are regulated by the United States Environmental Protection Agency as Class V injection wells under Code of Federal Regulations, title 40, parts 144 and 146. Code of Federal Regulations, title 40, parts 144 and 146, prescribe additional design regulations applicable to certain systems designed under this chapter. In addition, single-family dwellings systems that receive nonsewage wastewater are regulated by these federal regulations. All systems that receive hazardous wastes are regulated by the United States Environmental Protection Agency as Class IV injection wells. Disposal of hazardous waste must be according to state and federal regulations.

B. The owner or owner's agent of a system classified as a Class V injection well shall submit to the commissioner of the Pollution Control Agency and the United States Environmental Protection Agency the inventory information specified in Code of Federal Regulations, title 40, section 144.26.

C. All septage generated from MSTs must be treated and dispersed according to applicable standards for septage in Code of Federal Regulations, title 40, part 503, and any local requirements.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400*

Published Electronically: *March 11, 2011*

7081.0060 LOCAL REGULATION.

MSTs must be regulated under local ordinances in compliance with this chapter as described in Minnesota Statutes, section 115.55. Local administrative requirements for design review, construction permit issuance, construction inspections, variance procedures, enforcement, operational requirements, and other administrative processes must be according to chapter 7082.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400*

Published Electronically: *March 11, 2011*

7081.0070 VARIANCE PROCEDURES.

Parts 7081.0080 to 7081.0300 are provided to be incorporated into a local ordinance according to chapter 7082 and Minnesota Statutes, section 115.55. Variance requests to these design standards as adopted into local ordinances made by an owner or owner's agent must be issued or denied by the local unit of government. Variances must not be issued by the local unit of government for the minimal environmental protection outcomes in part 7081.0080, subparts 2 to 5. Variances may be

granted to part 7081.0080, subpart 4, item D, subitem (1), for replacement MSTs serving existing dwellings or other establishments.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400*

Published Electronically: *March 11, 2011*

7081.0080 PERFORMANCE AND COMPLIANCE CRITERIA.

Subpart 1. **General.** New construction, replacement, or existing MSTs designed under this chapter are considered conforming if they meet the requirements of this part. Existing MSTs constructed before February 4, 2008, are considered conforming if they meet the requirements of this part, except for subpart 4, items D and E.

Subp. 2. **Treatment required.** All sewage discharged from a dwelling or other establishment not served by a system issued a permit containing effluent and discharge limits or specific monitoring requirements by the agency must be treated according to local ordinances that comply with this chapter, chapter 7082, and Minnesota Statutes, section 115.55.

Subp. 3. **Public health and safety; imminent threat.**

A. To be in compliance, all MSTs must:

(1) have treatment processes and devices that do not allow sewage or sewage effluent contact with humans, insects, or vermin;

(2) disperse sewage effluent into soil or sand below final grade, with the effluent remaining below final grade;

(3) not discharge to drainage tile, the ground surface, or surface water or back up sewage into dwellings or other establishments;

(4) treat and disperse sewage effluent in a safe manner, including protection from physical injury and harm; and

(5) not have received hazardous material.

B. MSTs must be deemed an imminent threat to public health or safety for noncompliance with item A and any other condition that poses an imminent threat as determined by a qualified employee MSTs inspector or licensed MSTs inspection business.

Subp. 4. **Groundwater protection.** To be in compliance, all MSTs must:

A. meet the requirements of part 7080.1500, subpart 4, item D;

B. not be seepage pits, cesspools, drywells, leaching pits, sewage tanks, and treatment vessels that observably leak below the designated operating depth;

C. not allow viable fecal organisms to contaminate underground waters or zones of seasonal saturation;

D. employ nitrogen reduction processes that reduce nitrogen contribution to groundwater as determined in subitem (1) or (2):

(1) if the discharge from an MSTs will impact water quality of an aquifer, as defined in part 4725.0100, subpart 21, the effluent from an MSTs, in combination with the effective recharge to the groundwater, must not exceed a concentration of total nitrogen greater than 10 mg/l at the property boundary or nearest receptor, whichever is closest; and

(2) if the discharge from an MSTs will not impact water quality of an aquifer, as defined in part 4725.0100, subpart 21, best management practices developed by the commissioner to mitigate water quality impacts to groundwater must be employed; and

E. not exceed a groundwater discharge of phosphorus to a surface water that exceeds the phosphorus standard to the receiving water.

Subp. 5. **Other conformance.** To be in compliance, MSTs must meet the requirements of items A and B.

A. All methods and devices used to treat and disperse sewage must be designed to conform to all applicable federal, state, and local regulations.

B. Systems no longer in use must be abandoned according to part 7080.2500.

Subp. 6. **System operation.** To be in compliance, an MSTs must meet performance standards and be operated and managed according to its operating permit and management plan, as described in part 7081.0290. To be in compliance, an MSTs designed before February 4, 2008, must be operated according to applicable requirements of part 7080.2450.

Subp. 7. **Compliance criteria for systems receiving replacement components.** Components of existing MSTs that cause noncompliance must be repaired or replaced. The repaired or replacement components must meet technical standards and criteria in parts 7081.0110 to 7081.0280. The remaining components of the existing system must comply with subparts 2 to 5, including subpart 4, item D, if constructed after February 4, 2008.

Subp. 8. **Upgrade requirements.**

A. MSTs in compliance with this part shall be issued a certificate of compliance. Systems found not in compliance shall be issued a notice of noncompliance.

B. MSTs issued a notice of noncompliance based on criteria in subpart 3 shall be repaired or replaced within ten months or as directed by Minnesota Statutes, chapter 145A, whichever is most restrictive.

C. MSTs issued a notice of noncompliance based on criteria in subpart 4 or 5 shall be repaired or replaced according to local ordinance requirements.

D. Systems issued a notice of noncompliance based on criteria in subpart 6 must immediately be maintained, monitored, or managed according to the operating permit.

Statutory Authority: *MS s 115.03; 115.55*

History: 32 SR 1400; 35 SR 1353

Published Electronically: March 11, 2011

7081.0100 PROFESSIONAL REQUIREMENTS.

Systems must be designed, installed, inspected, operated, and maintained by appropriately licensed businesses and certified individuals according to chapter 7083 and other requirements.

Statutory Authority: MS s 115.03; 115.55

History: 32 SR 1400

7081.0110 SEWAGE FLOW DETERMINATION.

The design flow is the combined values determined in parts 7081.0120, 7081.0130, and 7081.0140.

Statutory Authority: MS s 115.03; 115.55

History: 32 SR 1400

Published Electronically: March 11, 2011

7081.0120 DESIGN FLOW DETERMINATION FOR DWELLINGS.

Subpart 1. **Sum of design flow for existing dwellings.** The design flow for MSTs serving existing dwellings is determined by the following calculation in conjunction with part 7080.1850:

the total flow from the ten highest flow dwellings + (total flow from the remaining dwellings * 0.45)

Subp. 2. **New housing developments.** For new housing developments to be served by a common SSTS, the developer must determine and restrict the total number of bedrooms for the development. Proposed dwellings are determined to be Classification I dwellings for flow determination purposes unless different classifications are approved by the local unit of government. The determined classification system must be used in conjunction with the flow calculation method in subpart 1. If the ultimate development of phased or segmented growth meets or exceeds the thresholds in part 7081.0040, subpart 1, item B, the initial system or systems and all subsequent systems require a state disposal system permit.

Subp. 3. **Additional capacity.** If construction of additional dwellings or bedrooms, installation of additional water-using devices, or other factors likely to increase the flow volumes can be reasonably anticipated, the MSTs must be designed to accommodate the additional capacity as determined by the local unit of government.

Statutory Authority: MS s 115.03; 115.55

History: 32 SR 1400; 35 SR 1353

Published Electronically: March 11, 2011

7081.0130 FLOW AND WASTE CONCENTRATION DETERMINATION FOR OTHER ESTABLISHMENTS.

Subpart 1. **Method.** Design flows for other establishments are determined by methods in items A to C. Measured flow values must be used for design flows when they are higher than the estimated flow values from table I.

A. The design flow of sewage for SSTS serving other establishments is estimated using table I.

TABLE I

ESTIMATED DESIGN SEWAGE FLOW FROM OTHER ESTABLISHMENTS

(1) Dwelling units (also see outdoor recreation)	Unit	Design flow (gal/ day/unit)
(a) Hotel or luxury hotel	guest	55
	square foot	0.28
(b) Motel	guest	38
	square foot	0.33
(c) Rooming house	resident	45
	add for each nonresident meal	3.3
(d) Daycare (no meals)	child	19
(e) Daycare (with meals)	child	23
(f) Dormitory	person	43
(g) Labor camp	person	18
(h) Labor camp, semipermanent	employee	50
(2) Commercial/Industrial		
(a) Retail store	square foot	0.13
	customer	3.8
	toilet	590
(b) Shopping center	employee	11.5

	service bay	50
	toilet	250
	square foot	0.25
(c) Car wash* (does not include car wash water)	square foot	5
(d) Airport, bus station, rail depot	passenger	5
	square foot	5
	restroom	565
(7) Institutional		
(a) Hospital*	bed	220
(b) Mental health hospital*	bed	147
(c) Prison or jail	inmate	140
(d) Nursing home, other adult congregate living	resident	125
(e) Other public institution	person	105
(f) School (no gym, no cafeteria, and no showers)	student	14

(g) School (with cafeteria, no gym and no showers)	student	18
(h) School (with cafeteria, gym, and showers)	student	27.5
(i) School (boarding)	student	95
(j) Church	seat	4
	add for each meal prepared	5
(k) Assembly hall	seat	4
(8) Miscellaneous		
(a) Public lavatory	user	5
(b) Public shower	shower taken	11

* Waste other than sewage is only allowed to be discharged into the system if the waste is suitable to be discharged to groundwater.

(1) Unless otherwise noted in table I, the flow values do not include flows generated by employees. A flow value of 15 gallons per employee per eight-hour shift must be added to the flow amount. Design flow determination for establishments not listed in table I must be determined by the best available information and approved by the local unit of government.

(2) Flow for systems not designed for maximum, seven-day, daily use may be determined by averaging the estimated flow from table I for a consecutive seven-day period if flow equalization is used and approved by the local unit of government.

(3) Maximum daily flow calculated under this item must be used to determine septic tank size according to part 7080.1930.

B. The measured design flow of sewage for SSTS serving other establishments is the average of the maximum measured daily flows for a consecutive seven-day period. Measurements must be corrected for occupancy or use according to Prescriptive Designs and Design Guidance for Advanced Designers, incorporated by reference under part 7080.1550, subpart 2.

C. SSTS using the flow determination method from part 7081.0040, subpart 1a, item B, subitem (1), may expand based on those measurements according to the following:

- (1) measured flow values may be used only for similar units;
- (2) expansion above 25 percent of the total flow is not allowed unless the flow is remeasured or estimated values from table I are used; and
- (3) measured flow values may not be used at any other facility or property.

Subp. 2. **Waste concentration.** If concentrations from the sewage tank to the soil dispersal system are expected to be higher than 170 mg/l BOD (or 125 mg/l CBOD₅), 60 mg/l TSS, or 25 mg/l of oil and grease, an estimated or measured average concentration must be determined and be acceptable to the local unit of government. System design must account for concentrations of these constituents so as not to cause internal system malfunction, such as, but not limited to, clogging of pipes, orifices, treatment devices, or media.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400; 35 SR 1353; 45 SR 725*

Published Electronically: *January 22, 2021*

7081.0140 INFILTRATION.

The design flow must also include 200 gallons of infiltration and inflow per inch of collection pipe diameter per mile per day with a minimum pipe diameter of two inches to be used for the calculation. Flow values are allowed to be further increased if the system employs treatment devices that are exposed to atmospheric conditions that will infiltrate precipitation. Flow estimates as calculated in this chapter shall not be relied upon for the design of collection systems.

History: *32 SR 1400*

Published Electronically: *March 11, 2011*

7081.0150 NECESSITY OF SOIL AND SITE EVALUATIONS.

Soil and site evaluations must be conducted for MSTs design. The evaluations must be conducted according to parts 7081.0160 to 7081.0200. Evaluations must identify and delineate an initial and replacement soil treatment and dispersal area with appropriate system site boundaries.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400; 38 SR 1001*

Published Electronically: *January 22, 2014*

7081.0160 PRELIMINARY EVALUATION.

A preliminary evaluation consists of determining:

A. the design flow, anticipated effluent concentrations of biochemical oxygen demand, total suspended solids, and oil and grease, and anticipated presence of nondomestic waste from the dwelling, dwellings, or other establishments;

B. whether the location of water supply wells impacts the location of the system due to the setback constraints;

C. whether buildings or improvements will be within 50 feet of the proposed soil dispersal area;

- D. whether buried water supply pipes will be within 50 feet of the proposed system;
- E. whether easements will be within 50 feet of the proposed system;
- F. whether the ordinary high water level of public waters will be within 500 feet of the proposed soil treatment and dispersal area and if so, a preliminary assessment of phosphorus impacts to the surface water;
- G. whether the system will be located in a floodplain and the system location in relation to the 100-year flooding elevation from published data if available or data that is acceptable to the local unit of government;
- H. the required setbacks from the proposed soil treatment and dispersal system;
- I. the soil survey information on the proposed soil dispersal area, including the soil map, map units, landscape position, parent material, flooding potential, slope range, periodically saturated soil level, depth to bedrock, texture, color, and structure of soil horizons, and permeability of soil horizons;
- J. the township, range, section number, and other unique property identifiers, as required by the local unit of government, dimensions, and size of the proposed soil treatment area;
- K. the names of property owners; and
- L. the location of the system on a United States Geological Survey quadrangle map of the proposed soil treatment and dispersal area and the area within one mile.

7081.0170 FIELD EVALUATION.

Subpart 1. **Generally.** Before conducting a field evaluation, the designer shall confer with the local unit of government to determine the requirements and scope of the evaluation, dependent upon system size, soil conditions, and other applicable factors. At a minimum, the requirements in this part must be met.

Subp. 2. **Property marks.** Property lines must be identified as acceptable to the owner. Site improvements, required setbacks, and easements must be identified, located, and marked.

Subp. 3. **Site area.** A general evaluation and description of the proposed soil dispersal area, including a general geomorphic description, current land use, and past land use, if known, must be provided.

Subp. 4. **Surface features.** The following surface features must be identified and described:

- A. the dominant vegetation;
- B. evidence of disturbed or compacted soil or flooding or run-on potential; and

C. landscape position, including landform, slope gradient, slope direction, and surface morphometry as described in the Field Book for Describing and Sampling Soils Version 2.0, September 2002, developed by the National Soil Survey Center and Natural Resources Conservation Service of the United States Department of Agriculture. The field book is incorporated by reference, is not subject to frequent change, and is available through the Minitex interlibrary loan system.

Subp. 5. Soil pits.

A. Soil pits are required to investigate the soil for MSTs design. The required number of soil pits to adequately define the limiting layer and soil dispersal system sizing must be determined by professional judgment based on the size of the area and consistency of the soil and must be approved by the local unit of government.

B. The qualifying soil pits or borings to be used for the MSTs design must be located on or near the borders of the proposed soil treatment and dispersal area. Soil pits must be dug outside the soil dispersal area if possible. The soil must be observed and described to a depth of at least three feet below the proposed depth of the system. Other soil observations are allowed to be made to supplement the required soil pit information.

C. Underground utilities must be located before soil observations are undertaken. Required safety precautions must be taken before entering soil pits.

Subp. 6. Soil description.

A. The soil properties and features in subitems (1) to (13) must be described according to Field Book for Describing and Sampling Soil, version 2, Natural Resources Conservation Service, United States Department of Agriculture (September 2002), for each soil horizon at each qualifying soil pit. The field book is incorporated by reference under subpart 4, item C.

- (1) Matrix soil color.
- (2) Soil features that have different colors from the matrix color, including but not limited to clay films, organic stains, silt coats, nodules, and concretions.
- (3) Abundance, size, color, and contrast of redoximorphic features.
- (4) Soil texture, with modifiers.
- (5) Grade, size, and shape of soil structure.
- (6) Moist soil consistence.
- (7) Abundance and size of rock fragments.
- (8) Abundance and size of roots.
- (9) Horizon boundary conditions.
- (10) Parent materials.
- (11) Pores, quantity and size.

(12) Quantity of boulders and tree stumps affecting construction.

(13) Any other characteristic or feature that affects permeability of the soil or treatment of sewage effluent.

B. The depth of bedrock, if encountered, must be determined by requirements of part 7080.1100, subpart 8.

C. The elevation of standing water evident in any soil pit must be identified.

D. The soil must not be described when frozen, at an improper moisture content, or under poor light conditions.

Subp. 7. **Method.** Hydraulic conductivity testing of the soil must be employed, along with a determination of the soil's texture, structure, and consistence, to determine the loading rate of effluent to the soil. The frequency of the observations and measurements must be determined by the professional judgment of the designer, dependent on the variation in soil conditions and the system size, with the frequency of the observations and measurements approved by the local unit of government.

Subp. 8. **Comparison with soil survey.** All field soil information gathered must be compared with soil survey information. Any discrepancies shall be identified.

7081.0180 SOIL INTERPRETATION FOR SYSTEM DESIGN.

Subpart 1. **Site and soil information.** Site and soil information gathered in parts 7081.0160 and 7081.0170 must be interpreted for suitability for MSTs siting, design, and construction, with consideration of the following:

A. surface features impacts from precipitation, run-on, and interflow or any other item that could have potential to adversely impact the ability of the soil to accept water;

B. cultural features impacts, including, but not limited to, setbacks and easements;

C. site conditions affecting system layout, distribution system requirements, and constructability;

D. layers of coarse soil textures that affect treatment;

E. disturbed, compacted, cut-filled, or other unnatural condition, if present;

F. the uniformity of the soil over the site;

G. future surrounding land use changes;

H. soil sizing factor or loading rate; and

I. an approximation of the rise in groundwater from system operation as determined by groundwater mounding calculations. A narrative evaluation of the accuracy of the approximation must be provided. The approximation must be related to the requirements in part 7081.0270, subpart 6.

Subp. 2. **Flood fringes.** Systems proposed to be located in flood fringes must determine feasibility of relocating the system outside the floodplain.

Subp. 3. **Depth.** The limiting layer in the soil shall be determined based on the depth of bedrock or periodically saturated soil if encountered. The depth to the periodically saturated soil shall be determined according to part 7080.1720, subpart 5, item E, and the depth of bedrock shall be as defined under part 7080.1100, subpart 8.

7081.0190 SITE PROTECTION.

The proposed soil treatment and dispersal area must be protected from disturbance, compaction, or other damage by staking, fencing, posting, or other effective method.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400*

Published Electronically: *March 11, 2011*

7081.0200 SOIL AND SITE REPORT.

All information required in parts 7081.0150 to 7081.0180 must be submitted for review and approval by the local unit of government prior to final design. The submittal must also contain:

- A. a map of the proposed soil dispersal area, drawn to scale, showing:
 - (1) features with a setback within 150 feet of the system;
 - (2) easements within 50 feet of the system;
 - (3) floodplains, wetlands, and surface waters, within 100 feet of the system;
 - (4) location and elevation of all soil pits, borings, and hydraulic tests; and
 - (5) two-foot contour lines;
- B. dates and weather conditions during the field evaluation;
- C. elevations of the periodically saturated soil or bedrock;
- D. proposed depths of the system bottom;
- E. proposed soil loading rate;

F. system site boundaries;

G. anticipated construction-related issues;

H. name, address, telephone number, and certified statement of the certified individual conducting the site evaluation; and

I. a narrative explaining any difficulties encountered during the site evaluation, such as, but not limited to, identifying and interpreting soil and landform features, and how the difficulties were resolved.

7081.0210 GROUNDWATER INVESTIGATION.

Subpart 1. **Necessity of investigation.** A preliminary groundwater evaluation must be conducted for all proposed MSTs according to this part.

Subp. 2. **Preliminary investigation.** The following information must be ascertained from the best available information:

A. the size of the soil dispersal system, proposed loading rate, and system geometry;

B. the township, range, section number, and other unique property identifiers, as required by the local unit of government, of the parcel where the proposed soil dispersal area is to be located;

C. any anticipated discharges from nondomestic sources to the proposed MSTs;

D. the location of the MSTs on a United States Geological Survey quadrangle topographic map, including the area within a one-mile radius of the proposed soil treatment system;

E. a determination of the general geology, periodic soil saturation, regional groundwater setting, and aquifers used for water supply and a description of the general site hydrology characteristics, including, but not limited to, identification and estimated depth measurements to geologic units and aquifers, and identification of groundwater confining strata;

F. a determination whether the proposed system is in a drinking water supply management area, inner wellhead management zone, source water protection area, or groundwater sensitive area;

G. an assessment of all water supply wells within a 300-foot radius of the proposed soil treatment area with a minimum assessment of well locations and casing depths from well construction log records. If no records exist, the well locations and casing depths must be estimated;

H. a determination or estimation of groundwater flow direction; and

I. an assessment of nitrogen impacts from the system.

Subp. 3. **Field or further investigation.** The designer must consult with the local unit of government to determine whether the local unit of government will require a field or further groundwater investigation and, if so, the extent of the investigation. The field or further investigation must be conducted if information gained in subpart 2 indicates that a proposed system is a potential contaminant threat to a regional water table, an aquifer, or water supply well(s). The threats of concern include, but are not limited to, fecal organism contamination, nitrate contamination, or phosphorus impacts to surface waters.

Subp. 4. **Monitoring.** The designer must consult with the local unit of government to determine if the local unit of government will require effluent or groundwater monitoring and, if so, the extent of the monitoring. Monitoring must be conducted if information gained in subpart 2 or 3 indicates that a proposed system is a potential contaminant threat to a regional water table, an aquifer, or a water supply well or impacts surface waters. The potential groundwater mound height must be monitored under all MSTs during operation.

Subp. 5. **Hydrological interpretations.** The information gathered in this part must be used to estimate or measure if the system adequately protects the groundwater and surface water as prescribed in part 7081.0080, subpart 4. The interpretation must include an evaluation of whether contaminant plumes will intersect water supply well capture zones.

Subp. 6. **Groundwater report.** All information required in this part must be submitted for review and approval of the local unit of government prior to final design, including all applicable information delineated on a map.

7081.0230 DESIGN STANDARDS.

A. The design standards for new construction or replacement MSTs in parts 7081.0240 to 7081.0270 are provided to meet many of the public health and environmental outcomes in part 7081.0080. In some cases, specific engineered methods must be employed in addition to the standards provided in parts 7081.0240 to 7081.0270.

B. MSTs must not receive storm water or other sources of clean water.

C. All structural components of the system and sealants must be designed to operate throughout the system's design life.

D. A flow measure device must be employed on all MSTs.

E. The system must be designed with sufficient access and ports to monitor the system as applicable.

F. MSTs must employ components registered under parts 7083.4000 to 7083.4110 or have sufficient regulatory oversight in the operating permit.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400*

Published Electronically: *March 11, 2011*

7081.0240 SEWAGE TANKS.

Subpart 1. **General.** All holding or treatment tanks or vessels, including lined vessels and grease interceptors serving MSTs, must conform to the applicable requirements of part 7080.1900 except as modified in this part or as designed by a professional engineer and approved by the local unit of government.

Subp. 2. [Repealed, 35 SR 1353]

Subp. 3. **Lint filters, effluent screens, and pressure filters.** An effluent screen or pressure filter must be used on all systems. If multiple septic tanks are used, the effluent screen must be placed in the last tank in the series and provided with an alarm. Lint filters are recommended if the sewage contains laundry waste.

Subp. 4. **Tank geometry.** The maximum liquid depth of septic tanks to determine liquid capacity must be no greater than 84 inches. The length-to-width ratio and the length-to-depth ratio must facilitate settling of solids.

Subp. 5. **Tank testing.** All tanks used for MSTs must be tested for watertightness according to part 7080.2010, subpart 3. The test shall be conducted to include the watertightness of all connections and risers.

Subp. 6. **Liners.** Liners used as watertight barriers for treatment devices must be designed and constructed according to liner requirements developed by the commissioner of the Pollution Control Agency. If conflicts exist between this chapter and those requirements, this chapter applies. Compacted soil liners must not be used as watertight barriers for treatment devices. Liners must be tested and must hold water without loss for 24 hours after being filled to the top of the liner.

Subp. 7. [Repealed, 35 SR 1353]

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400; 35 SR 1353*

Published Electronically: *March 11, 2011*

7081.0250 DISTRIBUTION OF EFFLUENT.

Distribution of effluent into a soil treatment and dispersal system must comply with part 7080.2050 or be designed by a registered professional engineer and approved by the local unit of government. MSTs must employ pressure distribution. The distribution system must be designed to dose and rest zones in accordance with operational requirements.

Statutory Authority: *MS s 115.03; 115.55*

History: 32 SR 1400

Published Electronically: March 11, 2011

7081.0260 DOSING OF EFFLUENT.

A. Dosing of effluent into a soil treatment and dispersal system must comply with part 7080.2100 except as modified in this part.

B. The dosing system must include an alternating two-pump system and have a minimum total capacity of 50 percent of the design flow.

C. The pump discharge capacity must be based on the perforation's discharge, with a minimum average head of two feet for 1/4 inch and 3/16 inch perforations and five feet for 1/8 inch perforations.

Statutory Authority: *MS s 115.03; 115.55*

History: 32 SR 1400

Published Electronically: March 11, 2011

7081.0270 FINAL TREATMENT AND DISPERSAL.

Subpart 1. **General.** Final treatment and dispersal must be according to applicable design requirements in chapter 7080, except as modified in this part. Code of Federal Regulations, title 40, parts 144 and 146, prescribe additional design regulations applicable to certain systems designed under this chapter. At a minimum, flow amounts to be used for the purposes of this part must be derived from part 7081.0110.

Subp. 2. **Setbacks.** MSTs components must meet the setbacks in Table II.

Table II

Minimum Setback Distances (feet)

Feature	Sewage Tank, Holding Tank, or Sealed Privy	Absorption Area or Sealed Privy	Building Sewer or Sewage Supply Pipes
Water supply wells	*	*	*
Buried water lines	*	*	*
Buildings**	10	20	
System site boundaries	10	10	
The ordinary high water level of public waters	***	***	

*Setbacks from buried water pipes and water supply wells are governed by chapters 4714 and 4725, respectively.

**If setbacks are reduced through local administrative processes, the system shall not be located under or within the structure.

***Setbacks from lakes, rivers, and streams are governed by chapters 6105 and 6120.

Subp. 3. **Minimal soil and site conditions.** The site proposed to support the soil treatment and dispersal system must:

A. have the upper 12 inches of the absorption area:

(1) be original soil;

(2) have a soil loading rate of greater than zero as listed in Table IX or IXa, in part 7080.2150, subpart 3, item E; and

(3) be above the periodically saturated soil or bedrock;

B. meet the area size requirements in subpart 5 and setbacks in subpart 2 and all easements;

C. not be a wetland or floodway;

D. not be in an area in which surface runoff from precipitation will concentrate (concave hillslope); and

E. allow the system to be placed on contour.

Subp. 4. **Inspection pipes.** Inspection pipes must be located to adequately assess the hydraulic performance of the entire soil dispersal system.

Subp. 5. **Soil absorption area sizing.**

A. Effluent loading rates to the soil must be determined in:

(1) part 7080.2150, subpart 3, item E, Table IX or IXa; or

(2) part 7080.2400, if allowed by the local unit of government.

B. If the absorption area receives septic tank or treatment level C effluent as described in part 7083.4030, the absorption area shall be increased by 50 percent of the amount derived in item A, subitem (1), and zoned for dosing and resting.

Subp. 6. **System geometry, lawn area sizing, and groundwater mounding.** The system geometry and lawn area sizing shall be sized to prevent groundwater mounding from violating the unsaturated zone beneath the soil system according to subpart 7, for proper hydraulic functioning, and for concentration reduction of nitrogen and phosphorus, if applicable.

Subp. 7. **Reserve land area.** Additional set-aside land area of 100 percent of the size determined in subpart 6 is required for systems whose absorption area receives effluent meeting treatment level A or B in part 7083.4030 or designed in accordance with part 7080.2400. Additional land area of

50 percent of the size determined in subpart 6 is required for systems whose absorption area receives treatment level C in part 7083.4030. The reserve land area must be identified and protected for future use if necessary. Replacement MSTs proposed on sites that cannot meet this requirement are allowed to be exempted by the local unit of government.

Subp. 8. **Soil treatment zone.** For treatment of effluent by soil to meet the performance criteria in part 7081.0080, subpart 4, item C, the soil treatment and dispersal systems must meet the requirements of item A, B, or C.

A. For soil treatment and dispersal systems that receive treatment level A-2, B-2, or C effluent as described in part 7083.4030, the soil treatment zone requirements must meet part 7080.2150, subpart 3, item C. The required three-foot vertical separation must be maintained during operation after accounting for groundwater mounding.

B. For soil treatment and dispersal systems that receive treatment level A or B effluent as described in part 7083.4030, the soil treatment zone requirements must meet part 7080.2150, subpart 3, item C, unless it is modified in Table XI of part 7080.2350, subpart 2, with a minimum vertical separation of two feet. The required vertical separation must be maintained during operation after accounting for groundwater mounding.

C. The minimum vertical separation can be determined by the method described in part 7080.2400 to meet provisions of part 7081.0080, subpart 4, item C, if allowed by the local unit of government.

D. An observation well to measure the height of the periodically saturated soil beneath the operating system must be installed and monitored according to the operating permit.

Subp. 9. **Nitrogen reduction.** Systems must employ nitrogen mitigation methods to achieve compliance with part 7081.0080, subpart 4, item D, and must be monitored in accordance with part 7081.0210, subpart 4.

Subp. 10. **Phosphorus reduction.** Phosphorus mitigation methods must be employed to achieve compliance with part 7081.0080, subpart 4, item E, if natural processes are found inadequate.

Subp. 11. **Design report.** All information required in this part shall be submitted for review and approval by the local unit of government prior to system construction, including all applicable information delineated on a map.

Statutory Authority: *MS s 14.389; 115.03; 115.55; 115.56; L 2015 1Sp4 art 4 s 132,145*

7081.0275 COLLECTION SYSTEMS.

The collection system for collection of sewage from multiple buildings or multiple other establishments discharging into an MSTs must be designed:

A. according to the Prescriptive Designs and Design Guidance for Advanced Designers, incorporated by reference under part 7080.1550, subpart 2; or

B. by a Minnesota licensed professional engineer.

Statutory Authority: *MS s 115.03; 115.55*

7081.0280 CONSTRUCTION REQUIREMENTS.

A. MSTs construction must be according to applicable construction requirements of chapter 7080.

B. The advanced designer must observe critical periods of system construction. The designer shall prepare a report of observed construction activities and submit the report to the local unit of government prior to final inspection.

Statutory Authority: *MS s 115.03; 115.55*

History: *32 SR 1400; 38 SR 1001*

Published Electronically: *January 22, 2014*

7081.0290 OPERATION AND MAINTENANCE.

A. New and existing systems must be maintained according to part 7080.2450 except as modified in this part.

B. All external grease interceptors must be routinely inspected to determine the volume of grease present. All external grease interceptors must be properly maintained to prevent clogging of downstream piping and system components.

C. For all systems constructed after February 4, 2008, the designer must complete an operation and maintenance manual and the manual must be submitted to the local unit of government before system operation. The manual shall include a copy of the plans and specifications, as-built drawings of the system, and information to properly operate the system.

D. All new systems shall be operated under a local operating permit submitted and approved with the design.

E. All groundwater shall be monitored in accordance with part 7081.0210, subpart 4.

F. Any operational noncompliance must be immediately corrected and reported by the owner or service provider to the local unit of government.
