

1.1 **Department of Health**

1.2 **Adopted Permanent Rules Relating to Wells and Borings**

1.3 **4725.0100 DEFINITIONS.**

1.4 [For text of subpart 1, see M.R.]

1.5 Subp. 1a. **Absorption area.** "Absorption area" has the meaning in part 7080.1100,
1.6 subpart 2, as proposed in State Register, Volume 31, Number 33, page 1025, published
1.7 on February 12, 2007, and not yet adopted, and includes the area of soil designed to
1.8 absorb sewage effluent.

1.9 Subp. 1b. **Agricultural chemical.** "Agricultural chemical" has the meaning in
1.10 Minnesota Statutes, section 18D.01, subdivision 3.

1.11 Subp. 1c. **Animal unit.** "Animal unit" has the meaning in part 7020.0300, subpart 5,
1.12 and is a unit of measure comparing the production of animal manure. One animal unit is
1.13 equal to one slaughter steer, one horse, or for animals not listed in part 7020.0300, subpart
1.14 5, the average weight of the animal in pounds divided by 1,000.

1.15 [For text of subp 19, see M.R.]

1.16 Subp. 21. **Aquifer.** "Aquifer" means a stratum of saturated, permeable bedrock or
1.17 unconsolidated material having a recognizable water table or potentiometric surface which
1.18 is capable of producing water to supply a well.

1.19 [For text of subp 21a, see M.R.]

1.20 Subp. 21b. **Bedrock.** "Bedrock" means a consolidated or coherent, hard, naturally
1.21 formed aggregation of rock in the earth. Bedrock includes geologic materials deposited
1.22 prior to the Cretaceous geologic period, and includes igneous and metamorphic rock
1.23 such as granite, basalt, and iron formation, and sedimentary rock including sandstone,
1.24 limestone, and shale. Bedrock includes sandstone formations such as the St. Peter or
1.25 Jordan that may be semiconsolidated. Bedrock does not include alluvium, glacial drift,

2.1 glacial outwash, glacial till, saprolite, or soil. For the purposes of this chapter, bedrock
2.2 does not include mineral matter deposited during, or more recently than, the Cretaceous
2.3 geologic period, or weathered portions of the formation surface where more than 50
2.4 percent of the parent bedrock is altered to an unconsolidated state.

2.5 Subp. 21c. **Bentonite.** "Bentonite" means an aluminum silicate clay that contains at
2.6 least 85 percent of the mineral montmorillonite and meets API specification 13A-04.

2.7 Subp. 21d. **Bentonite grout.** "Bentonite grout" means water and a minimum of
2.8 15 percent by weight of powdered or granular bentonite, with no additives to promote
2.9 temporary viscosity. An additional 15 percent by weight of either washed sand or cuttings
2.10 taken from the bore hole may be mixed into the bentonite and water slurry. The bentonite
2.11 must be designed by the manufacturer as a grout or well and boring sealant, and must be
2.12 mixed according to the manufacturer's specifications.

2.13 Subp. 21e. **Boring.** "Boring" has the meaning given in Minnesota Statutes, section
2.14 103I.005, subdivision 2, and includes environmental bore holes, vertical heat exchangers,
2.15 and elevator borings, except that for the purposes of this chapter, "boring" does not include
2.16 exploratory borings regulated under chapter 4727.

2.17 Subp. 22. **Casing.** "Casing" means a pipe or curbing placed in a well or boring to:

2.18 A. prevent the bore hole walls from caving;

2.19 B. seal off surface drainage; or

2.20 C. prevent gas, water, or other fluids from entering the well or boring except
2.21 through the screen, open hole, or perforated casing.

2.22 Subp. 22a. **Casing vent.** "Casing vent" means an outlet at the upper terminal of
2.23 a casing, cap, or cover to allow equalization of air pressure in the casing and escape of
2.24 toxic or flammable gases when present.

3.1 Subp. 22b. **Cement-sand grout.** "Cement-sand grout" means a fluid mixture of
3.2 Portland cement, sand, and water in the proportion of 94 pounds of Portland cement, not
3.3 more than 1.0 cubic foot of dry sand, and not more than six gallons of water. Admixtures to
3.4 reduce permeability or control setting time must meet ASTM Standard C494/C494M-04.

3.5 Subp. 22c. **Certified representative.** "Certified representative" has the meaning
3.6 given in Minnesota Statutes, section 103I.005, subdivision 2a, and means an individual
3.7 who acts on behalf of a licensee or registrant.

3.8 [For text of subp 23, see M.R.]

3.9 Subp. 23a. **Community water system.** "Community water system" has the meaning
3.10 given in Code of Federal Regulations, title 40, section 141.2, and means a public water
3.11 system which serves at least 15 service connections used by year-round residents, or
3.12 regularly serves at least 25 year-round residents.

3.13 Subp. 23b. **Completion of work.** "Completion of work" means the date on
3.14 which the installation of the pump or pumping equipment is finished, the date on which
3.15 construction of the well or boring is completed if a pump or pumping equipment is not
3.16 installed by the person constructing the well or boring, the date that construction work
3.17 regulated by this chapter is completed, the date the well or boring is put into service, or the
3.18 date that the permit or notification expires, whichever occurs first.

3.19 Subp. 23c. **Concrete.** "Concrete" means a mixture of Portland cement, sand and
3.20 gravel aggregate, and water so that one cubic yard of concrete contains a minimum of 470
3.21 pounds (five 94-pound bags) of Portland cement, a maximum of 30 gallons of water, and
3.22 sand and gravel aggregate passing a one-inch sieve. Admixtures to reduce permeability or
3.23 control setting time must meet ASTM Standard C494/C494M-04.

3.24 Subp. 24a. **Confining layer.** "Confining layer" means a stratum of a geologic
3.25 material that restricts vertical water movement. A confining layer includes:

4.1 A. a stratum at least ten feet in vertical thickness of unconsolidated materials or
4.2 bedrock, that has a vertical hydraulic conductivity of 10^{-6} centimeters per second or less;

4.3 B. a stratum at least ten feet in vertical thickness of clay, sandy clay, or silty
4.4 clay as defined by the United States Department of Agriculture in Handbook 18; or

4.5 C. a stratum at least ten feet in vertical thickness of the St. Lawrence or Eau
4.6 Claire sedimentary bedrock formation, or a stratum at least two feet in vertical thickness
4.7 of the Decorah or Glenwood sedimentary bedrock formation, as described in "Geology
4.8 of Minnesota: A Centennial Volume" by Sims, P.K., and Morey, G.B., pages 459-473,
4.9 "Paleozoic Lithostratigraphy of Southeastern Minnesota" by George Austin, which is
4.10 incorporated by reference. The publication is available at the Minnesota Geological
4.11 Survey, Minnesota Department of Health, or through the Minitex interlibrary loan
4.12 program.

4.13 Subp. 24b. **Confining materials.** "Confining materials" means geologic materials
4.14 that restrict vertical water movement. Confining materials include:

4.15 A. unconsolidated material or bedrock that has a vertical hydraulic conductivity
4.16 of 10^{-6} centimeters per second or less;

4.17 B. clay, sandy clay, or silty clay as defined by the United States Department of
4.18 Agriculture in Handbook 18 which is incorporated by reference; or

4.19 C. the Decorah, Glenwood, St. Lawrence, or Eau Claire sedimentary bedrock
4.20 formations, as described in "Geology of Minnesota: A Centennial Volume" by Sims,
4.21 P.K., and Morey, G.B., pages 459-473, "Paleozoic Lithostratigraphy of Southeastern
4.22 Minnesota" by George Austin, which is incorporated by reference.

4.23 Subp. 24c. **Contact hour.** "Contact hour" means a minimum of 50 minutes of
4.24 lecture, demonstration, workshop, or training excluding coffee breaks, registration, meals,
4.25 or social activities.

5.1 Subp. 24d. **Council.** "Council" means the Advisory Council on Wells and Borings
5.2 created under Minnesota Statutes, chapter 103I.

5.3 Subp. 24e. **Cuttings.** "Cuttings" means a mixture of drilling fluid, ground up rock,
5.4 and unconsolidated material removed from a well or boring.

5.5 Subp. 24f. **Dewatering well.** "Dewatering well" has the meaning given in Minnesota
5.6 Statutes, section 103I.005, subdivision 4a. Dewatering well includes a temporary well
5.7 for construction dewatering greater than 25 feet deep, and permanent dewatering wells.
5.8 Dewatering well does not include:

5.9 A. a well 25 feet or less in depth for temporary construction dewatering;

5.10 B. a well used to lower groundwater levels for control or removal of
5.11 groundwater contamination regulated as a remedial well; or

5.12 C. a drain tile, perforated pipe, sump, or pit less than ten feet deep, or less than
5.13 ten feet below the floor of a basement, used to lower groundwater levels for construction
5.14 or use of underground space.

5.15 Subp. 24g. **Dewatering well contractor.** "Dewatering well contractor" means
5.16 a person issued a limited well/boring contractor's license to construct, repair, and seal
5.17 dewatering wells.

5.18 Subp. 26a. **Drilling machine.** "Drilling machine" means a motorized machine or
5.19 mechanical device mounted on a truck, trailer, crawler, or skid used to excavate, drill,
5.20 or bore a well or boring. A drilling machine includes a cable tool, hollow rod, auger,
5.21 or rotary tool.

5.22 Subp. 26b. **Drive-point well.** "Drive-point well" has the meaning given in
5.23 Minnesota Statutes, section 103I.005, subdivision 5.

6.1 Subp. 26c. **Drive-point well or dug well contractor.** "Drive-point well or dug well
6.2 contractor" means a person issued a limited well/boring contractor's license to construct,
6.3 repair, or seal drive-point wells or dug wells.

6.4 Subp. 26d. **Driven casing.** "Driven casing" means steel casing forced into the
6.5 ground as the well or boring is advanced, where the outside diameter of the drill bit or
6.6 drilling tools is equal to or less than the outside diameter of the casing, casing coupling,
6.7 or drive shoe.

6.8 Subp. 27. **Dug well.** "Dug well" means a well that is excavated or dug with
6.9 unconventional drilling equipment in which the side walls may be supported by material
6.10 other than standard weight steel casing, stainless steel casing, or plastic casing as specified
6.11 in this chapter. Water enters a dug well through the side walls and bottom.

6.12 Subp. 27a. **Elevator boring.** "Elevator boring" has the meaning given in Minnesota
6.13 Statutes, section 103I.005, subdivision 6, and does not include cable elevators, hydraulic
6.14 cylinders used to elevate automobiles, or holeless elevators where the depth of the
6.15 excavation is less than ten feet below the lowest landing of the elevator.

6.16 Subp. 27b. **Elevator boring contractor.** "Elevator boring contractor" has the
6.17 meaning given in Minnesota Statutes, section 103I.005, subdivision 7.

6.18 Subp. 27c. **Environmental bore hole.** "Environmental bore hole" has the meaning
6.19 given in Minnesota Statutes, section 103I.005, subdivision 8. An environmental bore
6.20 hole must enter or go through a water bearing layer, be deeper than 25 feet or penetrate
6.21 a confining layer, and be used for testing or for remediation of soil or groundwater
6.22 contamination without extracting water. An environmental bore hole includes excavations
6.23 used to:

6.24 A. measure groundwater levels, including an excavation used as a piezometer;

6.25 B. determine groundwater flow direction or velocity;

7.1 C. measure earth properties such as hydraulic conductivity, bearing capacity,
7.2 or resistance;

7.3 D. obtain samples of geologic materials for testing or classification; or

7.4 E. remove or remediate pollution or contamination from groundwater or soil
7.5 through the use of a vent, vapor recovery system, or sparge point without extracting
7.6 groundwater.

7.7 [For text of subp 28, see M.R.]

7.8 Subp. 28a. **Feedlot.** "Feedlot" has the meaning given in part 7020.0300, subpart 3.

7.9 Subp. 29a. **Groundwater.** "Groundwater" has the meaning given in Minnesota
7.10 Statutes, section 115.01, subdivision 6, and does not include water in an artificially created
7.11 basin, such as a tank excavation, that is not hydrologically connected to the earth outside
7.12 the basin.

7.13 Subp. 29b. **Groundwater thermal exchange device.** "Groundwater thermal
7.14 exchange device" has the meaning given in Minnesota Statutes, section 103I.005,
7.15 subdivision 11, and includes a water-supply well used to withdraw or inject groundwater
7.16 for a heat pump.

7.17 Subp. 30. **Grout.** "Grout" means a low permeability material used to fill the annular
7.18 space around a casing, or to seal a well or boring. Grout is either neat-cement grout,
7.19 cement-sand grout, or bentonite grout.

7.20 Subp. 30a. [See repealer.]

7.21 Subp. 30c. **Hazardous substance.** "Hazardous substance" has the meaning given in
7.22 Minnesota Statutes, section 115B.02, subdivision 8.

7.23 Subp. 30d. **Hoist.** "Hoist" means a motorized machine or mechanical device that is
7.24 not a drilling machine, mounted on a truck, trailer, crawler, or skid, which is used to:

8.1 A. remove or install a pump or pumping equipment, casing, screen, pitless
8.2 adapter, or pitless unit;

8.3 B. remove an obstruction from a well or boring;

8.4 C. install a tremie pipe when sealing a well or boring; or

8.5 D. conduct an activity which requires a license or registration issued under
8.6 this chapter.

8.7 Hoist does not include hand-operated equipment such as a pipe wrench, chain, pulley,
8.8 or tripod.

8.9 Subp. 30e. **Holding tank.** "Holding tank" has the meaning given in part 7080.1100,
8.10 subpart 40, and means a watertight tank for storage of sewage until it can be transported
8.11 to a point of approved treatment and ~~disposal~~ dispersal.

8.12 Subp. 30f. **Hydrofracturing.** "Hydrofracturing" means the process of placing one
8.13 or more packers into a bedrock formation and injecting potable water under pressures high
8.14 enough to open existing fractures or create new fractures in the bedrock for the purpose of
8.15 increasing the water yield.

8.16 Subp. 30g. **Individual well contractor.** "Individual well contractor" means an
8.17 individual licensed according to Minnesota Statutes, section 103I.525.

8.18 Subp. 30h. **Interceptor.** "Interceptor" has the meaning given in part 4715.0100,
8.19 subpart 66.

8.20 Subp. 30i. **Licensee.** "Licensee" means a person who is licensed as a well
8.21 contractor, limited well/boring contractor, or elevator boring contractor under this chapter
8.22 and Minnesota Statutes, chapter 103I.

8.23 Subp. 30j. **Limited well/boring contractor.** "Limited well/boring contractor" has
8.24 the meaning given in Minnesota Statutes, section 103I.005, subdivision 12, and includes a
8.25 person with a license to: construct, repair, or seal drive-point wells or dug wells; install

9.1 or repair screens or pitless units or adapters and casing from the pitless unit or adapter
9.2 to the upper termination of the casing; install a well pump or pumping equipment; seal
9.3 wells or borings; construct, repair, or seal a dewatering well; or construct, repair, or seal a
9.4 vertical heat exchanger.

9.5 Subp. 30k. **Manure storage area.** "Manure storage area" has the meaning given in
9.6 part 7020.0300, subpart 14, and does not include a manure storage basin.

9.7 Subp. 30l. **Manure storage basin.** "Manure storage basin" means a lagoon, pit,
9.8 impoundment, or excavation in the ground used to store liquid and solid manure.

9.9 Subp. 30m. **Monitoring well.** "Monitoring well" has the meaning given in
9.10 Minnesota Statutes, section 103I.005, subdivision 14.

9.11 Subp. 30n. **Neat-cement grout.** "Neat-cement grout" means a fluid mixture in
9.12 the proportion of 94 pounds of Portland cement and not more than six gallons of water.
9.13 Bentonite up to five percent by weight of cement (4.7 pounds of bentonite per 94 pounds
9.14 of Portland cement) may be used to reduce shrinkage. Not more than 0.6 additional
9.15 gallons of water may be added for each one percent of bentonite. Admixtures to reduce
9.16 permeability or control setting time must meet ASTM Standard C494/C494M-04. The
9.17 minimum density of neat-cement grout using regular (Type 1) Portland cement without
9.18 bentonite or entrained air is 15.0 pounds per gallon. The minimum density of regular
9.19 neat-cement grout with bentonite and without entrained air is:

- 9.20 A. 14.7 pounds per gallon for neat-cement grout and two percent bentonite;
9.21 B. 14.4 pounds per gallon for neat-cement grout and three percent bentonite;
9.22 C. 14.1 pounds per gallon for neat-cement grout and four percent bentonite; and
9.23 D. 13.8 pounds per gallon for neat-cement grout and five percent bentonite.

9.24 Subp. 30o. **Noncommunity water system.** "Noncommunity water system" means
9.25 a public water system that serves an average of at least 25 persons daily at least 60

10.1 days a year, at a place other than their home, and that is not a community public water
10.2 system. ~~A noncommunity water system includes, but is not limited to, water systems~~
10.3 ~~servicing churches, schools, resorts, parks, camps, rest areas, and businesses meeting the~~
10.4 ~~criteria listed above.~~ Any water system meeting the criteria identified in this subpart that
10.5 serves churches, schools, resorts, parks, camps, rest areas, or businesses is deemed to be
10.6 a noncommunity water system.

10.7 Subp. 30p. **Ordinary high water level.** "Ordinary high water level" has the
10.8 meaning given in Minnesota Statutes, section 103G.005, subdivision 14.

10.9 Subp. 30q. **Pasture.** "Pasture" has the meaning given in part 7020.0300, subpart 18.

10.10 Subp. 30r. **Person.** "Person" has the meaning given in Minnesota Statutes, section
10.11 103I.005, subdivision 16.

10.12 Subp. 30s. **Petroleum.** "Petroleum" has the meaning given in Minnesota Statutes,
10.13 section 115C.02, subdivision 10.

10.14 [For text of subps 31a and 32, see M.R.]

10.15 Subp. 33. **Pitless unit.** "Pitless unit" means a watertight assembly with a cap that
10.16 attaches to a casing below ground, allows subsurface discharge through one or more
10.17 openings, and extends the upper termination of the casing above the established ground
10.18 surface.

10.19 Subp. 34. **Pollution or contamination.** "Pollution" or "contamination" means the
10.20 presence or addition of any substance to groundwater which is or may become injurious
10.21 to the health, safety, or welfare of the general public or private individuals using a well,
10.22 boring, or groundwater; or which is or may become injurious to domestic, commercial,
10.23 industrial, agricultural, or other uses which are being made of such water.

10.24 Subp. 34a. **Portland cement.** "Portland cement" means a construction material that
10.25 conforms to ASTM Standard C150-04a, "Standard Specification for Portland Cement."

11.1 [For text of subp 35, see M.R.]

11.2 Subp. 35a. **Potable water-supply well.** "Potable water-supply well" means a
11.3 water-supply well used to provide water to humans for such purposes as drinking;
11.4 cooking; bathing; manufacturing or processing of food, drink, or pharmaceuticals; or to
11.5 supply water to plumbing fixtures accessible to humans.

11.6 [For text of subps 36 and 37, see M.R.]

11.7 Subp. 37a. **Public water-supply well.** "Public water-supply well" means a well
11.8 supplying water to a public water system.

11.9 Subp. 37b. **Public water system.** "Public water system" means a community or
11.10 noncommunity water system regulated under chapter 4720.

11.11 [For text of subp 40, see M.R.]

11.12 Subp. 40a. **Rapid setting cement.** "Rapid setting cement" means a Type III Portland
11.13 cement as designated in ASTM Standard C150-04a, an API Class C cement, or any
11.14 Portland cement containing calcium chloride or sodium chloride in an amount between
11.15 two and four percent by weight of Portland cement, or gypsum in an amount between 20
11.16 and 100 percent by weight of Portland cement.

11.17 [For text of 40b and 41a, see M.R.]

11.18 Subp. 41b. **Remedial well.** "Remedial well" means a water-supply well used
11.19 to lower a groundwater level to control or remove contamination in groundwater and
11.20 excludes horizontal trenches, and sumps or pits less than ten feet deep.

11.21 Subp. 41c. [See repealer.]

11.22 Subp. 41d. **Rock.** "Rock" means a naturally formed aggregation of mineral matter
11.23 including the rocks described in part 4725.1851, subpart 4, item B.

12.1 Subp. 41e. **Sand.** "Sand" means unconsolidated mineral material composed
12.2 principally of quartz ranging in size from 0.0025 to 0.040 inches in diameter.

12.3 Subp. 41f. **Scrap yard.** "Scrap yard" means an establishment, place of business,
12.4 or place of storage or deposit that is maintained, operated, or used for storing, keeping,
12.5 buying, or selling scrap, junk, or waste metal, ~~including, but not limited to,~~ obtained
12.6 from automobiles, trucks, tractors, farm equipment, industrial equipment, containers, and
12.7 appliances, or similar items where the total scrap metal stored is greater than nine tons or
12.8 consists of more than five motor vehicles.

12.9 Subp. 41g. **Screen.** "Screen" means a wire-wrapped, gauze, shutter, slotted, or
12.10 engineered perforated pipe at the bottom of a casing designed to allow water to enter a
12.11 well or boring and to prevent sediment from entering the well or boring.

12.12 Subp. 41h. **Screen leader or riser.** "Screen leader" or "riser" means a pipe smaller in
12.13 diameter than the casing that is attached to the top of a screen and telescoped into a casing.

12.14 Subp. 41i. **Screen sump.** "Screen sump" means a pipe attached to the bottom of
12.15 a screen.

12.16 Subp. 41j. **Sealing.** "Sealing" means the process of preparing a well or boring to be
12.17 filled with grout and the process of filling a well or boring with grout.

12.18 Subp. 42. [See repealer.]

12.19 Subp. 43. **Seepage pit, leaching pit, or dry well.** "Seepage pit," "leaching
12.20 pit," or "dry well" means an underground pit, tank, or receptacle into which a septic
12.21 tank discharges effluent or other liquid waste and from which the liquid seeps into the
12.22 surrounding soil through the bottom or openings in the side of the pit, tank, or receptacle.

12.23 Subp. 43a. **Sensitive water-supply well.** "Sensitive water-supply well" means a
12.24 water-supply well with less than 50 feet of watertight casing where the casing does not

13.1 penetrate a confining layer or multiple layers of confining materials with an aggregate
13.2 thickness of ten feet or more.

13.3 [For text of subp 44, see M.R.]

13.4 Subp. 44a. **Sewage.** "Sewage" has the meaning given in Minnesota Statutes, section
13.5 115.01, subdivision 17, and includes ~~grey~~ gray water discharge from bathing and laundry.

13.6 Subp. 44b. **Sewage sump.** "Sewage sump" means a sump, dosing chamber, lift
13.7 station, tank, pit, or receptacle which contains a pump to discharge sewage.

13.8 [For text of subp 45, see M.R.]

13.9 Subp. 45a. **Soil ~~treatment~~ dispersal system.** "Soil ~~treatment~~ dispersal system"
13.10 has the meaning given in part 7080.1100, subpart 79, and means the piping and media
13.11 such as gravel, where sewage effluent is treated and ~~disposed of~~ dispersed into the soil
13.12 by percolation and filtration and includes trenches, seepage beds, drainfields, at-grade
13.13 systems, and mound systems.

13.14 Subp. 46. [See repealer.]

13.15 Subp. 47. **Static water level.** "Static water level" means the distance measured
13.16 from the established ground surface to the water surface in a well or boring neither being
13.17 pumped, nor under the influence of pumping nor flowing under artesian pressure.

13.18 Subp. 47a. **Storm water drain pipe.** "Storm water drain pipe" means a pipe or
13.19 conduit carrying storm water or surface water from a building roof, parking lot, street, or
13.20 paved area. Storm water drain pipe does not include a pipe or conduit carrying:

13.21 A. domestic waste water, sewage, or industrial wastes;

13.22 B. clear water drainage from building perimeter drain tile; or

13.23 C. water from a floor drain, not connected to a sewer, to a point of surface
13.24 discharge.

14.1 [For text of subp 48, see M.R.]

14.2 Subp. 49. **Suction line.** "Suction line" means a pipe or line connected to the inlet
14.3 side of a pump or pumping equipment or any connection to a casing that may conduct
14.4 nonsystem water into the well or boring because of negative pressures.

14.5 [For text of subps 49b and 49c, see M.R.]

14.6 Subp. 49d. **Unconsolidated materials.** "Unconsolidated materials" means
14.7 geological materials that are not bedrock and includes alluvium, glacial drift, glacial
14.8 outwash, glacial till, lacustrine deposits, loess, saprolite, soil, and those materials specified
14.9 in part 4725.1851, subpart 4, item A.

14.10 [For text of subp 49e, see M.R.]

14.11 Subp. 49f. **Vertical heat exchanger contractor.** "Vertical heat exchanger
14.12 contractor" means a person issued a limited well/boring contractor's license for
14.13 constructing, repairing, and sealing vertical heat exchangers.

14.14 Subp. 49g. **Vertical heat exchanger piping.** "Vertical heat exchanger piping"
14.15 means a sealed piping system containing a heat transfer fluid, installed vertically in the
14.16 ground, used to transfer heat to or from the surrounding earth.

14.17 Subp. 49h. **Wastewater treatment unit.** "Wastewater treatment unit" has the
14.18 meaning given in part 7045.0020, subpart 103.

14.19 Subp. 50a. **Water-supply well.** "Water-supply well" has the meaning given in
14.20 Minnesota Statutes, section 103I.005, subdivision 20a, and includes wells used:

14.21 A. for potable water;

14.22 B. for irrigation;

14.23 C. for agricultural, commercial, or industrial water supply;

14.24 D. for heating or cooling;

15.1 E. as a remedial well; or

15.2 F. for testing water yields for irrigation, commercial or industrial uses,
15.3 residential supply, or a public water system.

15.4 [For text of subp 50b, see M.R.]

15.5 Subp. 51. **Well.** "Well" has the meaning given in Minnesota Statutes, section
15.6 103I.005, subdivision 21, and includes water-supply wells, monitoring wells, and
15.7 dewatering wells.

15.8 [For text of subp 51a, see M.R.]

15.9 **4725.0150 INCORPORATIONS BY REFERENCE AND ABBREVIATIONS.**

15.10 This part indicates documents, specifications, and standards that are incorporated by
15.11 reference in this chapter. This material is not subject to frequent change, and is available
15.12 from the source listed, for loan or inspection from the Barr Library of the Minnesota
15.13 Department of Health, or through the Minitex interlibrary loan system. The abbreviations
15.14 listed in parenthesis after the source name are used in this chapter.

18.1 **4725.0200 APPLICATION TO ALL WELLS AND BORINGS.**

18.2 [For text of subps 1 and 2, see M.R.]

18.3 Subp. 3. **Licensee or registrant responsibility.** The licensee or registrant is
18.4 responsible to:

18.5 A. verify information and investigate conditions to comply with the
18.6 requirements of this chapter, including the location of contamination sources; and

18.7 B. provide accurate and truthful information to the commissioner.

18.8 Subp. 4. **Access to information and property.** ~~Under Minnesota Statutes, section~~
18.9 ~~144.99, subdivision 2, the commissioner may examine records or data of any person~~
18.10 ~~subject to regulation under Minnesota Statutes, chapter 103I, and may enter property for~~
18.11 ~~the purpose of taking an action authorized under statute or rule, or other actions listed in~~
18.12 ~~Minnesota Statutes, section 144.99, subdivision 1. Upon presentation of credentials, the~~
18.13 ~~commissioner or an employee or agent authorized by the commissioner, may examine~~
18.14 ~~records or data related to matters governed by Minnesota Statutes, chapter 103I and~~
18.15 ~~section 144.99, of any person subject to regulation under Minnesota Statutes, chapter~~
18.16 ~~103I, and, for the purpose of taking an action authorized under statute, rule, or otherwise~~
18.17 ~~identified in Minnesota Statutes, section 144.99, subdivision 1, relating to the enforcement~~
18.18 ~~of this chapter, may:~~

18.19 A. enter property to examine the records and data;

18.20 B. inspect equipment and material used in performing wells and borings work;

18.21 C. obtain and analyze water, air, and waste drill cuttings; and

18.22 D. inspect drill holes and drilled, sealed, or repaired wells and borings.

18.23 This authority must be exercised during regular working hours of Department of
18.24 Health inspectors with respect to inspections of vertical heat exchangers and groundwater
18.25 thermal exchange devices, and at reasonable times in all other cases.

19.1 Subp. 5. **Applicability to delegated well programs.** This chapter applies within a
19.2 political subdivision regulating construction, repair, or sealing of wells or elevator borings
19.3 delegated by the commissioner under Minnesota Statutes, section 103I.111. This does
19.4 not prohibit a local delegated authority from adopting an ordinance which is consistent
19.5 with or more restrictive than this chapter.

19.6 **4725.0250 ENFORCEMENT.**

19.7 Subpart 1. **Enforcement actions.** The commissioner may take one or more
19.8 enforcement actions for a violation of this chapter, Minnesota Statutes, chapter 103I,
19.9 section 144.99 or 144.992, including:

19.10 A. issuing a correction order under Minnesota Statutes, section 144.99,
19.11 subdivision 3;

19.12 B. issuing an administrative penalty order requiring a violation to be corrected,
19.13 and assessing a monetary penalty under Minnesota Statutes, section 144.99, subdivision 4;

19.14 C. bringing an action for injunctive relief in district court under Minnesota
19.15 Statutes, section 144.99, subdivision 5;

19.16 D. issuing a cease and desist order under Minnesota Statutes, section 144.99,
19.17 subdivision 6;

19.18 E. denying or refusing to renew an application for a permit, license, registration,
19.19 or certificate under Minnesota Statutes, section 144.99, subdivision 8;

19.20 F. suspending, revoking, or imposing limitations or conditions on a permit,
19.21 certification, license, or registration under Minnesota Statutes, chapter 14, and section
19.22 144.99, subdivisions 8 and 9;

19.23 G. enforcing the requirements of a stipulation agreement, settlement, or
19.24 compliance agreement provided by Minnesota Statutes, section 144.99, subdivision 1;

20.1 H. using the license or registration bond to compensate persons injured or
20.2 suffering financial loss because of the failure of a licensee or registrant to perform work in
20.3 compliance with duties under this chapter and Minnesota Statutes, chapter 103I;

20.4 I. requesting prosecution by the county attorney in the county where the
20.5 violation occurred or is occurring;

20.6 J. impounding a drilling machine or hoist used by a person who is not licensed
20.7 or registered according to this chapter and Minnesota Statutes, chapter 103I; and

20.8 K. using other remedies afforded by law and rule.

20.9 Subp. 2. **Responsibility for correction.** The person responsible for creating a
20.10 violation of this chapter is responsible for correcting the violation. In the case of a
20.11 violation created or constructed by a licensee or registrant, the licensee or registrant is
20.12 responsible for correcting the violation. The licensee or registrant who files a notification
20.13 or obtains a permit for a well or boring is responsible for the well or boring's compliance
20.14 with this chapter, even if the well or boring construction is subcontracted to another
20.15 person. A well or boring that cannot be corrected, must be sealed and a complying well or
20.16 boring constructed, unless the well or boring owner, responsible party, and commissioner
20.17 agree otherwise in a stipulated agreement.

20.18 Subp. 3. **Time of correction.** Correction of a violation of this chapter must be
20.19 completed under the supervision of the commissioner during normal business hours,
20.20 within 30 days of notice of the violation, or as specified in an approved variance, work
20.21 plan, or stipulation.

20.22 **4725.0350 FEES APPLICABLE TO THIS CHAPTER.**

20.23 Subpart 1. **Applicability.** The fees specified in Minnesota Statutes, chapter 103I,
20.24 apply to this chapter, except:

21.1 A. that a federal agency, state agency, or local unit of government is exempt
21.2 from payment of the fees; and

21.3 B. for notification and permits regulated by a board of health delegated under
21.4 Minnesota Statutes, section 103I.111.

21.5 Fees are not refundable, except as specified in part 4725.1836.

21.6 Subp. 2. **Qualification application fee.** A nonrefundable fee as specified in
21.7 Minnesota Statutes, chapter 103I, must be submitted to apply for qualification and
21.8 examination for licensure as an individual well contractor as specified in part 4725.0475,
21.9 subpart 3, or certification as a representative for any of the following:

21.10 A. a well contractor as specified in part 4725.0475, subpart 3;

21.11 B. a limited well/boring contractor as specified in part 4725.0475, subpart 4;

21.12 C. an elevator boring contractor as specified in part 4725.0475, subpart 5; or

21.13 D. a monitoring well contractor as specified in part 4725.0475, subpart 6.

21.14 Subp. 3. **License or registration fees.** An application for an original or renewal
21.15 license or registration must be accompanied by a nonrefundable license or registration fee
21.16 as specified in Minnesota Statutes, chapter 103I.

21.17 Subp. 4. **License or registration late renewal fee.** If a licensee or registrant fails to
21.18 submit all information required for the renewal of a license or registration or submits the
21.19 application and information after the required renewal date as specified in part 4725.1300,
21.20 a late fee as specified in Minnesota Statutes, chapter 103I, must be paid in addition to the
21.21 fees specified in subpart 3.

21.22 Subp. 5. **Notification fees.** A notification fee as specified in Minnesota Statutes,
21.23 chapter 103I, must be paid by a property owner or the owner's agent for:

21.24 A. each new water-supply well constructed;

22.1 B. each dewatering well constructed, or for a dewatering project comprising
22.2 five or more dewatering wells; and

22.3 C. each well sealed, or for sealing multiple monitoring wells located on a single
22.4 property with depths varying by no more than 25 feet that are sealed within 72 hours of
22.5 the start of construction.

22.6 Subp. 6. **Permit fees.** A nonrefundable permit fee as specified in Minnesota
22.7 Statutes, chapter 103I, must be paid by a property owner or owner's agent:

22.8 A. annually for a water-supply well that is not in use and under a maintenance
22.9 permit;

22.10 B. for construction of a monitoring well;

22.11 C. annually per well for a monitoring well that is unsealed and under a
22.12 maintenance permit;

22.13 D. per site for construction of all monitoring wells, regardless of number, used
22.14 as leak detection devices at a single motor fuel retail outlet, a single petroleum bulk
22.15 storage site excluding tank farms, or a single agricultural chemical facility site;

22.16 E. for construction and injection of water by a groundwater thermal exchange
22.17 device in addition to the notification fee specified in subpart 5;

22.18 F. for construction of a vertical heat exchanger;

22.19 G. annually for a dewatering well that is unsealed and under a maintenance
22.20 permit except that a dewatering project comprising more than five wells shall be issued a
22.21 single permit for wells recorded on the permit; and

22.22 H. for construction of a boring to install an elevator hydraulic cylinder.

23.1 Subp. 7. **Drilling machine registration fee.** A person must not use a drilling
23.2 machine unless a nonrefundable fee as specified in Minnesota Statutes, chapter 103I, is
23.3 paid annually to register the drilling machine.

23.4 Subp. 8. **Hoist registration fee.** A person must not use a hoist unless a
23.5 nonrefundable fee as specified in Minnesota Statutes, chapter 103I, is paid annually to
23.6 register the hoist.

23.7 Subp. 9. **Well disclosure fee.** According to Minnesota Statutes, section 103I.235, a
23.8 nonrefundable disclosure fee as specified in Minnesota Statutes, chapter 103I, shall be
23.9 collected.

23.10 Subp. 10. **Variance fee.** A nonrefundable fee as specified in Minnesota Statutes,
23.11 chapter 103I, shall be charged by the commissioner to request a variance from this chapter.

23.12 Subp. 11. **Electronic payment.** Notification and permit fees for construction and
23.13 sealing may be paid electronically.

23.14 **4725.0410 VARIANCE.**

23.15 Subpart 1. **General.**

23.16 A. The commissioner shall grant a variance to any provision of this chapter
23.17 according to the procedures and criteria specified in parts 4717.7000 to 4717.7050.

23.18 B. A person requesting a variance must submit a written request on a form
23.19 prescribed by the commissioner, along with the nonrefundable fee as required in
23.20 Minnesota Statutes, chapter 103I.

23.21 C. A variance application for a well or boring located in the jurisdiction of
23.22 a delegated program must be submitted, along with the fee as specified in Minnesota
23.23 Statutes, chapter 103I, to the commissioner. The delegated program may require a
23.24 separate application and fee.

24.1 D. A variance must be applied for and granted prior to commencing the activity
24.2 for which the variance is requested.

24.3 E. An application submitted without the information required by this part and
24.4 parts 4717.7000 to 4717.7050 shall be denied 18 months after the date received by the
24.5 commissioner.

24.6 F. Construction, and the conditions of a granted variance, must be completed
24.7 within 18 months of variance approval or the variance is void, unless conditions of the
24.8 variance specify otherwise.

24.9 Subp. 2. **Additional standards for construction, repair, or sealing variance**
24.10 **requests.** In addition to the information required in part 4717.7000, subpart 2, the
24.11 applicant must submit to the commissioner, in writing, the following information for a
24.12 request to vary a construction, repair, or sealing provision related to wells or borings in
24.13 parts 4725.2010 to 4725.7450:

24.14 A. the location of the well or boring in terms of the township number, range
24.15 number, section number, three-quarter sections, and the street address if assigned;

24.16 [For text of items B to G, see M.R.]

24.17 H. a description of the anticipated geologic conditions;

24.18 I. the depth to water, pumping rate, number of persons served by the well, and
24.19 a description of the use of the well; and

24.20 J. information on special construction methods, safety measures, or precautions
24.21 proposed to protect public health, safety, and the environment.

24.22 [For text of subp 3, see M.R.]

24.23 Subp. 4. **Additional standards for variance to be placed on a deed.** In addition
24.24 to the information in subparts 1 and 2, a variance to be placed on a real property deed
24.25 must include:

- 25.1 A. the complete name(s) of the fee owner(s) as the name(s) appears on the deed;
- 25.2 B. the property identification number;
- 25.3 C. the Torrens certificate number if the property is Torrens property; and
- 25.4 D. the legal property description.

25.5 Subp. 5. **Emergency variances.** A variance may be verbally granted by the
25.6 commissioner in an emergency where a delay in starting work poses an immediate and
25.7 significant danger to health or safety. ~~Exceptional circumstances include, but are not~~
25.8 ~~limited to, cases where: (1) well failure will leave persons or livestock without drinking~~
25.9 ~~water; (2) inaction presents an imminent threat to contamination of the well, boring, or~~
25.10 ~~groundwater; (3) delay will result in collapse or damage to the well or boring; (4) delay~~
25.11 ~~will result in the endangerment of health or safety such as in an unstable excavation; or~~
25.12 ~~(5) such action is court ordered.~~

25.13 A. The person applying for the variance must submit a completed application
25.14 and fee to the commissioner prior to receiving approval.

25.15 B. Verbal approval must be given by the commissioner prior to starting
25.16 construction.

25.17 C. Construction must be according to conditions verbally reported.

25.18 D. The emergency variance shall be void if construction is not started within 72
25.19 hours of verbal approval.

25.20 E. All construction and location standards in this chapter, except those
25.21 specifically modified under the variance, shall apply to wells and borings constructed
25.22 under an emergency variance.

25.23 F. The commissioner shall not issue an emergency variance to persons who
25.24 ~~violate~~ have violated the emergency variance requirements.

26.1

LICENSING AND REGISTRATION**26.2 4725.0475 ACTIVITIES REQUIRING LICENSURE OR REGISTRATION.**

26.3 Subpart 1. **Activity requiring licensure or registration.** Except for those persons
26.4 exempted under Minnesota Statutes, section 103I.205, subdivision 4, paragraph (e), a
26.5 person must hold a license or registration to:

26.6 A. construct, repair, modify, or seal a well or boring;

26.7 B. construct or seal a vertical heat exchanger or groundwater thermal exchange
26.8 device;

26.9 C. construct, repair, or seal an elevator boring;

26.10 D. install a well pump or pumping equipment;

26.11 E. install, modify, or remove a screen, pitless unit, or pitless adapter; or

26.12 F. modify or materially affect the yield, water quality, diameter, depth, or casing
26.13 of a well or boring including:

26.14 (1) attachment of water conditioning or other devices to the casing of
26.15 the well or boring;

26.16 (2) chemical treatment of the well or boring with acid or other chemicals;

26.17 (3) development or stimulation of a well or boring including the use of
26.18 explosives or hydrofracturing; or

26.19 (4) termination of a monitoring well, environmental bore hole, remedial
26.20 well, or dewatering well casing at-grade, including installation or modification of the
26.21 protective manhole or vault as required in part 4725.6850.

26.22 Subp. 2. **Exceptions to licensure or registration.** Nothing in this part shall prohibit:

26.23 [For text of item A, see M.R.]

27.1 B. a plumber or plumbing contractor from installing and servicing a water
27.2 service pipe according to chapter 4715, from the source of supply;

27.3 C. a water conditioning contractor from installing water conditioning equipment
27.4 within a building according to chapter 4715;

27.5 D. a limited well/boring contractor from repairing, installing a pump or
27.6 pumping equipment, or repairing or sealing a well that the limited well/boring contractor
27.7 is licensed to construct; and

27.8 E. a water-supply system operator certified under chapter 9400 or the owner of
27.9 a transient, noncommunity water system from disinfecting the public well they are directly
27.10 responsible for, according to part 4725.5550.

27.11 [For text of subp 3, see M.R.]

27.12 Subp. 4. **Limited well/boring contractor licenses.** A person performing any of the
27.13 activities in items A to F must have either a well contractor's license or have a separate
27.14 limited well/boring contractor license for each of the limited licensure areas listed in
27.15 items A to F:

27.16 A. limited licensure to construct, repair, modify as specified in subpart 1, item
27.17 F, or seal a dug well or drive-point well;

27.18 B. limited licensure to install, modify, or repair screens, pitless units or
27.19 adapters, and casings from the frost line or pitless unit or adapter to the upper termination
27.20 of the casing;

27.21 C. limited licensure to install a well pump or pumping equipment, or any of the
27.22 activities in subpart 1, item F, subitems (1) and (2);

27.23 D. limited licensure to seal wells or borings, remove obstructions from a well or
27.24 boring before sealing, remove or perforate casing before sealing, or other activities to seal
27.25 a well or boring, except that a drive-point well or dug well contractor may seal a dug well

28.1 or drive-point well, a dewatering well contractor may seal a dewatering well, an elevator
28.2 boring contractor may seal an elevator boring, a vertical heat exchanger contractor may
28.3 seal a vertical heat exchanger, and a monitoring well contractor may seal a monitoring
28.4 well or environmental bore hole;

28.5 [For text of items E and F, see M.R.]

28.6 Subp. 5. **Elevator boring contractor license.** A person must have an elevator
28.7 boring contractor's license or a well contractor's license to construct, repair, or seal
28.8 an elevator boring.

28.9 [For text of subps 6 and 7, see M.R.]

28.10 **4725.0550 CERTIFIED REPRESENTATIVE OR INDIVIDUAL WELL**
28.11 **CONTRACTOR.**

28.12 Subpart 1. **Qualification application for certification to represent a licensee,**
28.13 **registrant, or to be an individual well contractor.** Anyone applying to be certified as
28.14 a representative of a licensee or registrant or an individual well contractor must submit
28.15 to the commissioner a properly completed qualification application. The applicant must
28.16 submit written documentation of the experience required in part 4725.0650. Written
28.17 documentation includes, but is not limited to, well or boring construction or sealing
28.18 records, letters from employers verifying employment, and work reports.

28.19 Subp. 3. **Qualifications, responsibilities, requirements.** A certified representative
28.20 and individual well contractor must have honesty and integrity.

28.21 A. The certified representatives, or the individual well contractor, must be
28.22 named on the license or registration for the licensee or registrant.

28.23 B. A certified representative must not represent more than one licensee or
28.24 registrant.

29.1 C. The certified representative must be responsible for conducting all operations
29.2 under the representative's supervision and as delegated by the licensee or registrant
29.3 in accordance with Minnesota Statutes, chapter 103I, and this chapter including, but
29.4 not limited to:

29.5 (1) ~~supervision of~~ supervise work to ensure compliance with this chapter;
29.6 ~~and~~

29.7 (2) ~~completion and signing of~~ complete and sign permit applications,
29.8 notifications, variance applications, construction records, and sealing records; and

29.9 (3) be responsible for conducting all operations under the representative's
29.10 supervision and as delegated by the licensee or registrant according to this chapter and
29.11 Minnesota Statutes, chapter 103I.

29.12 D. The certified representative and individual well contractor must annually
29.13 complete the continuing education requirements in part 4725.1650.

29.14 Subp. 4. **Loss of certified representative.** When a certified representative no
29.15 longer works for the registrant or licensee, the registrant or licensee must inform the
29.16 commissioner within five days of that fact. If a licensee or registrant has only one certified
29.17 representative and the representative no longer works for the registrant or licensee, the
29.18 registrant or licensee must name an acting representative until a representative who meets
29.19 the requirements in parts 4725.0550 to 4725.1025 is certified by the commissioner. The
29.20 licensee or registrant may operate with an acting representative for no more than 150
29.21 days. The acting representative must notify the commissioner during business hours, a
29.22 minimum of 24 hours prior to commencing work, of the proposed starting time of each
29.23 well or boring construction or sealing.

29.24 **4725.0650 EXPERIENCE REQUIREMENTS; CERTIFIED REPRESENTATIVE**
29.25 **AND INDIVIDUAL WELL CONTRACTOR.**

30.1 Subpart 1. **Well contractor certified representative and individual well**
30.2 **contractor.** Anyone applying to be certified as a representative of a well contractor or to
30.3 be an individual well contractor must have four years of experience. A year of experience
30.4 is a year in which the applicant personally, and under the supervision of a licensed well
30.5 contractor:

30.6 A. worked for a minimum of 1,000 hours. The applicant's 1,000 hours of
30.7 experience must include drilling water-supply wells, grouting, sealing wells, repairing
30.8 wells, installing pumps, disinfecting wells, and completing well construction and sealing
30.9 records; and

30.10 B. constructed a minimum of ten water-supply wells; or

30.11 C. constructed at least one or more multiple cased water-supply wells with an
30.12 outer casing diameter of ten inches or more and a well depth or cumulative depth of 700
30.13 feet or more.

30.14 An applicant with experience prior to 2006 must have constructed a minimum of
30.15 five water-supply wells per year.

30.16 An applicant shall be deemed to have one year of experience ~~will be granted to an~~
30.17 ~~applicant who~~ if the applicant has successfully completed one year of education in well
30.18 construction practices at an accredited college, university, or postsecondary institution.

30.19 An applicant shall be deemed to have up to a maximum of two years of experience ~~will be~~
30.20 ~~granted to an~~ if the applicant ~~who~~ has successfully completed an associate or technical
30.21 degree in well construction practices at an accredited college, university, or postsecondary
30.22 institution.

30.23 Supervision is not equivalent to personally doing the work.

30.24 Subp. 2. **Monitoring well contractor certified representative.** Anyone applying to
30.25 be certified as a representative of a monitoring well contractor must meet the requirements
30.26 in items A to C, or meet the requirements in item D.

31.1 A. The applicant must be:

31.2 (1) a professional engineer licensed by the Minnesota State Board of
31.3 Architecture, Engineering, Land Surveying, Landscape Architecture, Geoscience, and
31.4 Interior Design according to Minnesota Statutes, sections 326.02 to 326.15;

31.5 (2) a hydrologist or hydrogeologist certified by the American Institute of
31.6 Hydrology; or

31.7 (3) a geologist certified by the American Institute of Professional
31.8 Geologists, or a geoscientist licensed by the Minnesota State Board of Architecture,
31.9 Engineering, Land Surveying, Landscape Architecture, Geoscience, and Interior Design
31.10 under Minnesota Statutes, sections 326.02 to 326.15.

31.11 [For text of items B to D, see M.R.]

31.12 Subp. 3. **Limited well/boring contractor certified representative; drive-point**
31.13 **wells or dug wells.** Anyone applying to be certified as a representative for a limited
31.14 well/boring contractor licensed to construct, repair, and seal dug wells and drive-point
31.15 wells must have three years of experience. A year of experience is a year in which the
31.16 applicant personally constructed five dug wells or drive-point wells and worked for a
31.17 minimum of 1,000 hours constructing, repairing, or sealing dug wells or drive-point
31.18 wells, and installing pumps in dug wells or drive-point wells. An applicant must have
31.19 gained the experience under a licensed well contractor or a licensed drive-point well or
31.20 dug well contractor.

31.21 Subp. 4. **Limited well/boring contractor certified representative; well screens,**
31.22 **pitless adapters, and pitless units.** Anyone applying to be certified as a representative

31.23 for a limited well/boring contractor licensed to install or repair well screens or pitless
31.24 adapters or units and well casing from the pitless device to the upper termination of the
31.25 well must have two years of experience. A year of experience is a year in which the
31.26 applicant worked a minimum of 1,000 hours and personally installed or repaired five
32.1 well screens or pitless units or adapters and well casings from the pitless unit or adapter
32.2 to the upper termination of the well. The experience must have been gained under the
32.3 supervision of a licensed well contractor or limited well/boring contractor licensed to
32.4 install or repair well screens or pitless units or adapters and well casings from the pitless
32.5 unit or adapter to the upper termination of the well.

32.6 Subp. 5. **Limited well/boring contractor certified representative; pumps and**
32.7 **pumping equipment.** Anyone applying to be certified as a representative for a limited
32.8 well/boring contractor licensed to install a pump or pumping equipment must have two
32.9 years of experience in pump installation and repair. The applicant must have personally
32.10 installed 20 pumps. The work must include a minimum of 1,000 hours installing well
32.11 pumps or pumping equipment.

32.12 Subp. 6. **Limited well/boring contractor certified representative; well sealing.**
32.13 Anyone applying to be certified as a representative for a limited well/boring contractor
32.14 licensed to seal wells must have three years of experience. A year of experience is a
32.15 year in which the applicant:

32.16 A. personally sealed a minimum of five wells; and

32.17 B. worked a minimum of 1,000 hours constructing wells, clearing obstructions,
32.18 removing or perforating well casings, and grouting wells.

32.19 The applicant must have gained the experience under a licensed well contractor
32.20 or limited well/boring sealing contractor.

32.21 Subp. 7. **Limited well/boring contractor certified representative; dewatering**
32.22 **wells.** Anyone applying to be certified as a representative for a limited well/boring

32.23 contractor licensed to construct, repair, or seal dewatering wells must have two years of
32.24 experience. A year of experience is a year in which the applicant:

32.25 [For text of items A and B, see M.R.]

33.1 Subp. 7a. **Limited well/boring contractor certified representative; vertical heat**
33.2 **exchanger.** Anyone applying to be certified as a representative for a limited well/boring
33.3 contractor licensed to construct, repair, or seal vertical heat exchangers must meet the
33.4 requirements in item A or meet the requirements in items B and C.

33.5 [For text of item A, see M.R.]

33.6 B. The applicant must have a minimum of two years experience in well drilling.
33.7 A year of experience is a year in which the applicant personally and under the supervision
33.8 of a licensed well contractor constructed a minimum of five water- supply wells and
33.9 constructed, repaired, or sealed wells and environmental bore holes for 500 hours.

33.10 [For text of item C, see M.R.]

33.11 Subp. 8. **Elevator boring contractor certified representative.** Anyone applying
33.12 to be certified as a representative for an elevator boring contractor licensed to construct,
33.13 repair, or seal an elevator boring must have two years of experience related to the
33.14 construction, repair, and sealing of elevator borings. A year of experience is a year in
33.15 which the applicant designed, supervised, or actually constructed three elevator borings.

33.16 Subp. 9. **Experience outside state.** If all or part of the experience required in
33.17 this part was gained by an applicant outside Minnesota, the applicant must provide the
33.18 commissioner with information satisfactorily demonstrating that the experience was
33.19 gained constructing, repairing, and sealing wells or borings in geological conditions
33.20 substantially similar to conditions in Minnesota and in a jurisdiction with certification,
33.21 licensing, or registration requirements comparable to those in Minnesota.

33.22 **4725.0900 COUNCIL EVALUATION OF APPLICANTS.**

33.23 Upon request by the commissioner, the council may conduct oral examinations using a
33.24 standardized examination developed by the commissioner in consultation with the council.
33.25 Upon request by the commissioner, the council may also provide recommendations as to
34.1 the appropriate disciplinary action for representatives, licensees, and registrants found to
34.2 be in violation of Minnesota Statutes, chapter 103I and this chapter.

34.3 **4725.1025 EXAMINATION.**

34.4 Anyone applying to be a certified representative of a licensee or registrant or as an
34.5 individual well contractor must pass an examination which may be a combination of
34.6 written and oral questions as determined by the commissioner with the advice of the
34.7 Advisory Council on Wells and Borings established by Minnesota Statutes, section
34.8 103I.105. The applicant must pass the examination within one year from the date
34.9 notified by the commissioner that the applicant is qualified to take the examination. An
34.10 applicant who fails an examination must not retake the examination within two weeks
34.11 of the failed attempt. An applicant who fails to successfully complete the examination
34.12 after three attempts must reapply for certification as a representative or licensure as an
34.13 individual well contractor, according to parts 4725.0550 to 4725.1025, and must not
34.14 reapply within one year of the third failure to pass the examination. If, upon passing
34.15 the examination, the applicant is not licensed as an individual well contractor or listed
34.16 as a certified representative of a licensee or registrant within one year, reapplication as
34.17 a certified representative or individual well contractor must be made according to parts
34.18 4725.0550 to 4725.1025.

34.19 **4725.1075 APPLICATION FOR LICENSURE OR REGISTRATION.**

34.20 Subpart 1. **Application for licensure or registration.** A person must apply for
34.21 licensure or registration on a form provided by the commissioner.

34.22 A. The application must include the name, address, and telephone number of
34.23 the person applying for licensure or registration and list the name, business address, and
34.24 telephone number, if different, of all certified representatives of the licensee or registrant
34.25 who meet the qualifications in parts 4725.0550 to 4725.1025. The licensee or registrant
34.26 must have at least one certified representative.

35.1 B. The application form must be signed by an officer or other legally authorized
35.2 agent of the person making application for licensure or registration.

35.3 C. The application for licensure or registration must be accompanied by the
35.4 nonrefundable licensure or registration fee specified in Minnesota Statutes, chapter 103I.

35.5 **4725.1300 LICENSE OR REGISTRATION RENEWAL.**

35.6 Subpart 1. **Renewal.** Licenses expire on January 31 of each year and registrations
35.7 expire on December 31 of each year. Each licensee or registrant shall submit an
35.8 application for license or registration renewal on forms provided by the commissioner
35.9 no later than January 31 for licenses and December 31 for registrations. The renewal
35.10 application must be accompanied by the license and registration fees. A penalty fee, as
35.11 specified in Minnesota Statutes, chapter 103I, must also be paid if the renewal is submitted
35.12 after the January 31 license or December 31 registration deadline. At the time of license
35.13 or registration renewal, the approved continuing education courses completed by the
35.14 individual well contractor as required by part 4725.1650, or the name(s) of the certified
35.15 representative(s), must be listed, and the licensee or registrant must provide the bond
35.16 required under part 4725.1250.

35.17 Subp. 2. **Failure to renew.** A licensee or registrant who fails to renew a license
35.18 or registration before the expiration date, and later wishes to renew, must pay all license
35.19 or registration fees and late fees.

35.20 **4725.1310 CERTIFICATION RENEWAL.**

35.21 Subpart 1. **Renewal.** Certification of licensee representatives expires on January
35.22 31 of each year and certification of registrant representatives expires on December 31 of
35.23 each year. Each representative shall submit an application for certification renewal on
35.24 forms provided by the commissioner no later than January 31 for licensee representatives
35.25 and December 31 for registrant representatives. At the time of certification renewal,
36.1 the approved continuing education courses completed by the representative as required
36.2 by part 4725.1650 must be listed.

36.3 Subp. 2. **Failure to renew.** A person who fails to renew a certification within two
36.4 years of expiration may not renew the certification. Requalification for certification must
36.5 be according to parts 4725.0550 to 4725.1250.

36.6 **4725.1500 DISCIPLINARY ACTION AGAINST CERTIFIED**
36.7 **REPRESENTATIVE, INDIVIDUAL WELL CONTRACTOR, LICENSEE, OR**
36.8 **REGISTRANT; RETURN OF DOCUMENTS.**

36.9 Subpart 1. **Commissioner action.** The commissioner may suspend, revoke, or
36.10 impose limitations or conditions on a license, certification, or registration if the certified
36.11 representative, individual well contractor, registrant, or licensee:

36.12 A. violates a provision of this chapter or Minnesota Statutes, chapter 103I;

36.13 B. obtains a certification, license, or registration through error, fraud, or
36.14 cheating;

36.15 C. provides false or fraudulent information verbally, or on renewal forms,
36.16 construction or sealing reports, water sample reports, or other required reports;

36.17 D. knowingly aids or allows an unlicensed or unregistered person to engage in
36.18 activities requiring a license or registration under Minnesota Statutes, section 103I.205,
36.19 subdivision 4;

36.20 E. engages in conduct, in the course of performing work requiring licensure or
36.21 registration, that is likely to harm the public, or conduct that demonstrates a willful or
36.22 careless disregard for the health or safety of a property owner or other person;

36.23 F. has been convicted during the previous five years of a felony or gross
36.24 misdemeanor reasonably related to the business of well or boring construction, repair,
36.25 or sealing;

37.1 G. fails to pay monetary penalties that are assessed according to an
37.2 administrative penalty order issued under Minnesota Statutes, chapter 144; or

37.3 H. violates the conditions of a stipulated agreement, variance, order, settlement,
37.4 compliance agreement, license, registration, certification, notification, or permit.

37.5 Subp. 4. **Revoked certification, license, or registration.** A suspended or revoked
37.6 certification, license, or registration along with the current drilling machine and hoist
37.7 registration decals must be returned to the commissioner when the certification, license,
37.8 or registration is revoked or suspended.

37.9 **4725.1600 REAPPLICATION AFTER CERTIFICATION, LICENSE, OR**
37.10 **REGISTRATION REVOCATION.**

37.11 Subpart 1. **Revoked license, certification, or registration.** A person whose
37.12 certification as a representative, license, or registration has been revoked may not reapply
37.13 for certification, licensure, or registration within one year of the date of revocation. A
37.14 person whose certification, license, or registration has been revoked must reapply as
37.15 required by parts 4725.0550 to 4725.1250.

37.16 **4725.1650 CONTINUING EDUCATION REQUIREMENTS.**

37.17 An individual well contractor or a certified representative of a well contractor or
37.18 monitoring well contractor must successfully complete six contact hours of continuing
37.19 education activities annually, of which at least two hours must be obtained from a
37.20 continuing education program presented or sponsored by the commissioner. A certified

37.21 representative of a limited well/boring contractor or elevator boring contractor must
37.22 successfully complete two contact hours of continuing education annually presented
37.23 or sponsored by the commissioner. A certified representative with multiple limited
37.24 well/boring or elevator boring certifications need only successfully complete two contact
37.25 hours of continuing education annually presented or sponsored by the commissioner.

38.1 An individual well contractor or certified representative is exempt from the continuing
38.2 education requirements for one year following the completion of the examination in
38.3 part 4725.1025.

38.4 An individual well contractor or certified representative who fails to complete the
38.5 continuing education required by this part, must not conduct contracting, or represent a
38.6 licensee or registrant, for activities regulated by this chapter.

38.7 **4725.1675 CRITERIA FOR CONTINUING EDUCATION.**

38.8 A continuing education activity must meet the criteria in items A to E for credit to
38.9 be given.

38.10 A. The activity must be related to wells and borings, drilling technology,
38.11 groundwater contamination, health aspects of water quality, groundwater monitoring,
38.12 geology, hydrology, well or boring construction and sealing, water systems and water
38.13 treatment, or other subjects approved by the commissioner.

38.14 [For text of items B and C, see M.R.]

38.15 D. The activity must be at least one contact hour as defined in part 4725.0100,
38.16 subpart 24c.

38.17 [For text of item E, see M.R.]

38.18 **4725.1700 PLACEMENT OF DECALS AND LICENSE OR REGISTRATION**
38.19 **NUMBER.**

38.20 A licensee or registrant shall place in a conspicuous location on both sides of each
38.21 drilling machine or hoist the license or registration number in figures not less than three

38.22 inches high and 1-1/2 inches wide. The figures must be in a contrasting color to the rest of
38.23 the machine or hoist. Decals issued by the commissioner designating the year for which
38.24 the license or registration was issued or renewed must be affixed directly adjacent to and
38.25 below the license or registration number on each drilling machine or hoist. Contractors
38.26 using small drilling machines or hoists shall attach their decals on a portable display to
39.1 be shown at the well or boring site. The decals shall be issued by the commissioner
39.2 upon licensure or registration and renewal.

39.3 **4725.1800 DRILLING MACHINE AND HOIST REGISTRATION.**

39.4 Upon licensure or registration, the licensee or registrant must register all drilling
39.5 machines and hoists and pay a fee for each machine or hoist. Each time the licensee or
39.6 registrant renews licensure or registration under part 4725.1300, the licensee or registrant
39.7 must renew each drilling machine and hoist registration and must pay a renewal fee for
39.8 each drilling machine or hoist. Upon acquiring additional drilling machines or hoists
39.9 after initial licensure or registration or after renewal of licensure or registration, the
39.10 licensee or registrant must register the machine or hoist and pay the hoist or drilling
39.11 machine registration fee. The drilling machine and hoist registrations are concurrent
39.12 with the license or registration, are not prorated, and expire on January 31 of each year
39.13 for licensees and December 31 of each year for registrants. Upon receipt of the required
39.14 fee and information, a drilling machine or hoist registration card shall be issued for
39.15 identification purposes for each drilling machine and hoist registered by the contractor.
39.16 The card shall be carried on the drilling machine or hoist at all times where it may be
39.17 inspected by the commissioner.

39.18 The registration card and decals furnished for a drilling machine or hoist are not
39.19 transferable.

39.20 A person must not use a drilling machine or hoist to conduct activities requiring a
39.21 license or registration under this chapter unless the drilling machine or hoist is registered,

39.22 displays the licensee's or registrant's license or registration number, and displays current
39.23 decals.

39.24 **PERMITS AND NOTIFICATIONS**

39.25 **4725.1810 PERMITS AND NOTIFICATIONS, GENERAL.**

40.1 Subpart 1. **Well on property of another.** A person must not construct, or have
40.2 constructed, a well on another person's property unless a written agreement exists
40.3 according to Minnesota Statutes, section 103I.205, subdivision 8. The well owner,
40.4 or other person identified in the agreement as being responsible for the well, has the
40.5 responsibilities, authorities, and obligations of the property owner specified in this chapter.

40.6 Subp. 2. **Delegated programs.** A person constructing or sealing a well or boring
40.7 that is located within a political subdivision with a well and boring program delegated
40.8 under Minnesota Statutes, chapter 103I, must file a notification with, or obtain a permit
40.9 from, the delegated program prior to construction or sealing of a well or boring regulated
40.10 by the delegated program, except that a notification for construction or sealing of a
40.11 community public water-supply well must be filed with the commissioner.

40.12 Subp. 3. **Fees.** Notification and permit fees must be paid according to parts
40.13 4725.0350 and 4725.1836 and Minnesota Statutes, chapter 103I.

40.14 Subp. 4. **Reporting measurements.** Depths or heights reported on a permit or
40.15 notification must be measured from the established ground surface.

40.16 Subp. 5. **Hours of receipt, valid notification and permit.** A notification is not valid
40.17 until the notification is received by the commissioner between the hours of 8:00 a.m. and
40.18 4:30 p.m., Monday through Friday, excluding holidays, except for emergency notifications
40.19 and permits according to part 4725.1838. A notification received by facsimile after 4:30
40.20 p.m. is not valid until the next business day. A permit is not valid until the commissioner
40.21 has approved the permit. A notification or permit is not valid unless accompanied by the

40.22 proper fee. Work regulated under a notification or permit must not be done without a
40.23 valid notification or permit.

40.24 Subp. 6. **Transfer of notification or permit.** A permit or notification is not
40.25 transferable. Only the licensee or registrant who submits the notification, or the licensee
40.26 or registrant who was issued the permit, may construct or seal the well or boring.

41.1 Subp. 7. **Conversion.** A well or boring must not be converted to another type
41.2 of well or boring unless:

41.3 A. a variance is granted according to part 4725.0410; or

41.4 B. the well or boring was constructed by a contractor licensed or registered to
41.5 construct that type of well or boring, the well or boring complies with the requirements of
41.6 this chapter for that type of well or boring, and a new notification or permit, and fee if
41.7 required, is submitted to the commissioner.

41.8 **4725.1820 NOTIFICATION FOR CONSTRUCTION OF WATER-SUPPLY**
41.9 **WELLS.**

41.10 The owner of the property where a water-supply well is to be located, the property
41.11 owner's agent, a licensed well contractor, or for a drive-point water-supply well, a limited
41.12 drive-point well or dug well/boring contractor must submit notification of construction
41.13 of the proposed water-supply well to the commissioner according to this part. This part
41.14 does not apply to the construction of monitoring wells regulated by part 4725.1830;
41.15 dewatering wells regulated by part 4725.1825; or drive-point water-supply wells installed
41.16 by the well owner on the owner's property for residential or agricultural use regulated by
41.17 part 4725.1849. This part applies to water-supply wells, including wells constructed for
41.18 the purpose of testing water yields for irrigation, commercial use, residential supply,
41.19 or a public water system.

41.20 A. A well must not be constructed, deepened through a confining layer, or
41.21 have casing installed or removed below the frost line until notification is made to the
41.22 commissioner.

41.23 B. Notification must be made on a form provided by the commissioner, or in a
41.24 format approved by the commissioner. The notification must be legible, accompanied by
41.25 the required fee, and signed by the certified representative of the licensee or the owner of
41.26 the property where the well is located, or the property owner's agent.

42.1 C. A notification must be completed for each well.

42.2 D. The notification must include the following information for each well:

42.3 (1) the name and license number of the licensed contractor;

42.4 (2) the name, address, and telephone number of the well owner, and
42.5 property owner if different; and

42.6 (3) the township number, range number, section and one quartile, and the
42.7 property street address if assigned, of the proposed well location.

42.8 E. A new notification must be filed with the commissioner if:

42.9 (1) a licensed contractor other than the one listed on the original notification
42.10 constructs the well; or

42.11 (2) the well is completed on property other than that listed on the original
42.12 notification.

42.13 A new fee is not required for a new notification filed under this item.

42.14 F. The notification is valid for 18 months from the date it is filed.

42.15 **4725.1825 DEWATERING WELL CONSTRUCTION NOTIFICATION.**

42.16 This part applies to all dewatering wells as defined in part 4725.0100, subpart 24f,
42.17 including drive-point wells used for dewatering.

42.18 A. A dewatering well must not be constructed, deepened through a confining
42.19 layer, have casing installed or removed below the frost line, or completed as an at-grade
42.20 well until a notification has been made to the commissioner by a dewatering well
42.21 contractor or well contractor.

42.22 B. The dewatering well contractor or well contractor must submit to the
42.23 commissioner a dewatering well construction notification on a form provided by the
43.1 commissioner, or in a format approved by the commissioner. The notification must be
43.2 legible and signed by the dewatering well contractor or well contractor.

43.3 C. A construction notification must be completed for each dewatering well or
43.4 dewatering well project including any wells deepened through a confining layer, having
43.5 casing installed or removed below the frost line, or converted to an at-grade well. The
43.6 notification must indicate whether the dewatering well, or dewatering well project will
43.7 affect wells used for potable purposes, and if so, what measures will be taken to provide
43.8 potable water to persons adversely affected by the dewatering.

43.9 D. The construction notification must include the following information for
43.10 each well:

43.11 (1) the name and license number of the dewatering well contractor or
43.12 well contractor;

43.13 (2) the name and address of the dewatering well owner, and property
43.14 owner if different; and

43.15 (3) the township number, range number, section and one quartile, and the
43.16 property street address if assigned, of the proposed dewatering well location.

43.17 E. Construction notifications are not transferable. Only the licensee who
43.18 submitted the notification is authorized to construct the dewatering well or wells.

43.19 F. The construction notification is valid for 18 months from the date issued.

43.20 **4725.1830 MONITORING WELL CONSTRUCTION PERMIT.**

43.21 This part applies to all monitoring wells, including drive-point wells used as
43.22 monitoring wells.

43.23 A. A monitoring well must not be constructed, deepened through a confining
43.24 layer, have casing installed or removed below the frost line, or be converted to an at-grade
43.25 well until a permit has been issued by the commissioner to the monitoring well contractor,
44.1 well contractor, or to a limited well screen and pitless adapter and pitless unit contractor
44.2 for modification to an at-grade well.

44.3 B. A well contractor or monitoring well contractor must submit to the
44.4 commissioner a permit application on a form provided by the commissioner, or in a
44.5 format approved by the commissioner. The application must be legible and signed by the
44.6 monitoring well contractor or well contractor and the property owner or agent.

44.7 C. A permit application must be completed for each monitoring well.

44.8 (1) For monitoring wells used as leak detection devices at a single
44.9 petroleum bulk storage site excluding tank farms, a single agricultural chemical facility
44.10 site, or a single motor fuel retail outlet, a single permit application may be completed for
44.11 all wells on a site drilled under a single contract. A site consists of a single continuous
44.12 piece of property on which the petroleum bulk storage facility or motor fuel retail outlet
44.13 is located. The site does not include other properties on which monitoring wells are
44.14 constructed to evaluate a spill or leak associated with the petroleum facility. All proposed
44.15 monitoring wells on a site must be listed on the permit.

44.16 (2) A construction permit is not required for a temporary monitoring well if
44.17 the monitoring well is sealed within 72 hours of the time construction on the well begins.
44.18 A sealing notification is required prior to sealing in accordance with part 4725.1832.

44.19 D. A permit application for a monitoring well owned by a person other than the
44.20 property owner must include a copy of a written agreement meeting the requirements of
44.21 Minnesota Statutes, section 103I.205, subdivision 8.

44.22 E. The permit application must include the following information for each well:

44.23 (1) the name and registration number of the monitoring well contractor or
44.24 license number of the well contractor or limited well/boring contractor;

45.1 (2) the name and address of the monitoring well owner, and property
45.2 owner, if different;

45.3 (3) the township number, range number, section and one quartile, and the
45.4 property street address if assigned, of the proposed monitoring well location; and

45.5 (4) the anticipated well depth.

45.6 F. Permit applications for monitoring wells constructed through a confining
45.7 layer or into bedrock must include the following information for each well in addition to
45.8 that required in item E:

45.9 [For text of subitems (1) to (5), see M.R.]

45.10 [For text of item G, see M.R.]

45.11 H. The permit is valid for 18 months from the date issued.

45.12 **4725.1831 GROUNDWATER THERMAL EXCHANGE DEVICE PERMITS.**

45.13 This part applies to the construction of a groundwater thermal exchange device (heat
45.14 pump) with reinjection to an aquifer.

45.15 [For text of item A, see M.R.]

45.16 B. The property owner or the property owner's agent must submit to the
45.17 commissioner a permit application on a form provided by the commissioner, or in a format
45.18 approved by the commissioner. The application must be legible and must contain:

45.19 (1) the name, license number, and signature of the well contractor
45.20 constructing the wells;

45.21 (2) the name, address, and signature of the owner of the property on which
45.22 the device will be installed;

45.23 (3) the township number, range number, section, and one quartile, and the
45.24 property street address if assigned, of the proposed device location;

46.1 [For text of subitems (4) to (8), see M.R.]

46.2 [For text of items C and D, see M.R.]

46.3 E. The groundwater thermal exchange device must be constructed within 18
46.4 months of the date the permit is issued.

46.5 **4725.1832 NOTIFICATION FOR WELL SEALING.**

46.6 This part applies to the sealing of wells, including water supply, remedial, monitoring,
46.7 temporary monitoring, and dewatering wells, as provided by Minnesota Statutes, sections
46.8 103I.231, 103I.301, and 103I.315. This part does not apply to the sealing of borings.

46.9 A. A well must not be sealed until the owner of the property where the well
46.10 is located, the owner's agent, or a licensee or registrant submits notification of proposed
46.11 sealing of the well to the commissioner. Notification must be on a form provided by the
46.12 commissioner or in a format approved by the commissioner. The notification must be
46.13 legible and must include the following information for each well:

46.14 (1) the name and licensee number or registrant number;

46.15 (2) the name, address, and telephone number of the well owner, and
46.16 property owner if different;

46.17 (3) the township number, range number, section and one quartile, and
46.18 the property street address if assigned; and

46.19 (4) identification of a multiple-cased well with an inside casing eight
46.20 inches or larger in diameter.

46.21 [For text of items B and C, see M.R.]

46.22 **4725.1833 VERTICAL HEAT EXCHANGER CONSTRUCTION PERMITS.**

46.23 This part applies to the construction of vertical heat exchangers.

47.1 A. A vertical heat exchanger must not be constructed, or have piping installed
47.2 or removed below the frost line, until a permit has been issued by the commissioner to
47.3 the well contractor or limited well/boring contractor licensed to construct vertical heat
47.4 exchangers.

47.5 B. The well contractor or vertical heat exchanger contractor must submit to
47.6 the commissioner a vertical heat exchanger permit application on a form provided by
47.7 the commissioner. The application must be legible and signed by the well contractor or
47.8 vertical heat exchanger contractor and the property owner or property owner's agent.

47.9 C. A permit application must be completed for each vertical heat exchanger
47.10 and must include:

47.11 (1) the name and license number of the well contractor or vertical heat
47.12 exchanger contractor;

47.13 (2) the name and address of the owner of the property on which the vertical
47.14 heat exchanger will be installed;

47.15 (3) the township number, range number, section and one quartile, and the
47.16 property street address if assigned, of the proposed vertical heat exchanger;

47.17 (4) a plan diagram showing the location of the vertical heat exchanger
47.18 borings, property lines, and structures on the property;

47.19 (5) the geological materials expected to be encountered by the borings;

47.20 (6) the number, diameter, and depth of all bore holes drilled to install the
47.21 vertical heat exchanger piping;

47.22 (7) the grout materials and grouting method;

47.23 (8) the type of heat transfer fluid to be used; and

47.24 (9) the system operating pressure.

48.1 D. The vertical heat exchanger must be constructed within 18 months of the
48.2 date the permit is issued.

48.3 **4725.1835 ELEVATOR BORING CONSTRUCTION PERMITS.**

48.4 This part applies to an excavation or hole for installation of an elevator boring.

48.5 A. An elevator boring must not be constructed until a permit has been issued by
48.6 the commissioner to the elevator boring contractor or well contractor.

48.7 B. An elevator boring contractor or well contractor must submit to the
48.8 commissioner an elevator boring permit application on a form provided by the
48.9 commissioner, or in a format approved by the commissioner. The application must be
48.10 legible and signed by the elevator boring contractor or well contractor.

48.11 C. The permit must include the following information for each elevator boring:

48.12 (1) the name and license number of the elevator boring contractor or well
48.13 contractor;

48.14 (2) the name and address of the elevator boring owner, and property
48.15 owner if different;

48.16 (3) the township number, range number, section and one quartile, and the
48.17 property street address if assigned, of the proposed boring location; and

48.18 (4) the anticipated depth of the elevator boring.

48.19 D. Permit applications for elevator borings constructed through a confining
48.20 layer must include the following information in addition to that required in item C:

48.21 (1) the diameter of the boring;

48.22 (2) the drilling method;

48.23 (3) the casing materials;

48.24 (4) the materials and methods used to grout the boring; and

49.1 (5) a cross-sectional diagram of the boring.

49.2 E. The permit is valid for 18 months from the date issued.

49.3 **4725.1836 NOTIFICATION AND PERMIT FEES.**

49.4 The fees specified in Minnesota Statutes, chapter 103I, must accompany all
49.5 notifications and permit applications. Notification or permit fees may be paid electronically
49.6 and the permit requests or notifications may be submitted by facsimile. A notification or
49.7 permit is not valid if payment by check is returned for nonsufficient funds, or electronic
49.8 payment is refused by the financial institution. Notification and permit application fees
49.9 shall not be refunded, except that a water-supply well notification fee may be refunded to
49.10 the person who paid the fee if drilling has not taken place, and a written request for refund
49.11 is received by the commissioner within 18 months of receipt of the fee.

49.12 **4725.1838 EMERGENCY NOTIFICATIONS AND PERMITS.**

49.13 Notifications and applications for permits may be verbally reported under emergency
49.14 conditions for construction of water-supply wells, elevator borings, monitoring wells,
49.15 and dewatering wells, except for monitoring wells and dewatering wells constructed
49.16 through a confining layer and for at-grade monitoring wells. Emergency conditions are
49.17 exceptional circumstances where a delay in starting construction poses an immediate and
49.18 significant danger to health or safety and there is no time for prior notification or obtaining
49.19 the required permit.

49.20 Exceptional circumstances include, but are not limited to, cases where well failure
49.21 will leave livestock or persons without drinking water, where inaction presents an
49.22 imminent threat to contamination of the well, boring, or groundwater, where delay
49.23 will result in collapse or damage to the well or boring, where delay will result in the
49.24 endangerment of health or safety such as in an unstable excavation, or where such
49.25 construction is court ordered.

50.1 A. If emergency conditions affecting construction of a water-supply well, or
50.2 dewatering well occur during normal business hours, the property owner, the property
50.3 owner's agent or a licensed contractor may verbally provide to an authorized representative
50.4 of the commissioner the information required for notification under part 4725.1820
50.5 or 4725.1825. If emergency conditions affecting construction of a monitoring well or
50.6 elevator boring occur during normal business hours, the contractor may verbally provide
50.7 the information required for permits under part 4725.1830 or 4725.1835, whichever is
50.8 applicable, to an authorized representative of the commissioner.

50.9 B. If emergency conditions occur after business hours or on a nonbusiness
50.10 day, construction of a water-supply well, monitoring well, dewatering well, or elevator
50.11 boring may begin if the property owner, property owner's agent, or contractor, as required
50.12 in item A, telephones the Minnesota Department of Health and leaves a message on
50.13 the answering service reporting the applicable information required in part 4725.1820,
50.14 4725.1825, 4725.1830, or 4725.1835.

50.15 C. A written notification or written permit application and the applicable
50.16 fees must be received by the commissioner within five working days after emergency
50.17 notification of the start of construction of a water-supply well or dewatering well, or
50.18 within five working days after the start of construction under an emergency permit for
50.19 a monitoring well or elevator boring. The property owner, the property owner's agent,

50.20 or a licensed or registered contractor is responsible for submitting a written notification
50.21 or permit and fee.

50.22 [For text of items D and E, see M.R.]

50.23 F. The commissioner shall not issue emergency permits to, or accept emergency
50.24 notifications from, contractors who violate the emergency notification or permit
50.25 requirements.

50.26 **4725.1840 UNSUCCESSFUL COMPLETION OF A WELL OR BORING.**

51.1 If a water-supply well, monitoring well, dewatering well, vertical heat exchanger,
51.2 or elevator boring for which a notification or permit has been filed is unsuccessful, a
51.3 new well or boring may be constructed for the same owner on the same property within
51.4 18 months of notification or permit approval, without submitting a new construction
51.5 fee, notification, or permit application if:

51.6 A. the construction and depth of the new well or boring is not substantially
51.7 different from the initial well or boring;

51.8 B. the person installing the well or boring submits an amended well and boring
51.9 construction record; and

51.10 C. the unsuccessful well or boring is sealed according to this chapter and a
51.11 sealing record is submitted.

51.12 **4725.1845 DENIAL OF CONSTRUCTION PERMIT APPLICATION.**

51.13 Subpart 1. **Grounds for denial of application.** The commissioner may deny a
51.14 permit application or revoke a permit for construction of a monitoring well, groundwater
51.15 thermal exchange device, vertical heat exchanger, or elevator boring if:

51.16 [For text of item A, see M.R.]

51.17 B. information submitted in the permit application is determined to be
51.18 incomplete, incorrect, omitted, false, or misrepresented;

51.19 [For text of items C to G, see M.R.]

51.20 [For text of subp 2, see M.R.]

51.21 **4725.1848 WELL MAINTENANCE PERMITS.**

51.22 Subpart 1. **Permit required.**

52.1 A. Annual maintenance permits are required for monitoring wells and
52.2 dewatering wells that were constructed after January 1, 1990, and are not permanently
52.3 sealed within 14 months of construction.

52.4 B. Annual maintenance permits are required for wells, including monitoring
52.5 wells, dewatering wells, and water-supply wells, that are not in use and not sealed.

52.6 [For text of subps 2 and 3, see M.R.]

52.7 Subp. 4. **Well maintenance permits.** An annual well maintenance permit is
52.8 required for an unsealed dewatering well, monitoring well, or water-supply well that is not
52.9 in use or that is inoperable. The owner of the property on which such a well is located must
52.10 submit the annual permit fee along with the permit application, or have the well sealed.

52.11 Subp. 5. **Monitoring well maintenance permits.** The provisions in items A to C
52.12 apply to monitoring wells constructed after January 1, 1990.

52.13 [For text of items A to C, see M.R.]

52.14 Subp. 6. **Dewatering well maintenance permits.** The conditions in items A to C
52.15 apply to dewatering wells constructed after January 1, 1990.

52.16 [For text of items A to C, see M.R.]

52.17 **4725.1849 PROPERTY OWNER OR LESSEE DRIVE-POINT WATER-SUPPLY**
52.18 **WELL CONSTRUCTION NOTIFICATION.**

52.19 Subpart 1. **Scope.** This part applies to drive-point water-supply wells constructed
52.20 by an individual on property that is owned or leased by the individual and that is used

52.21 for agricultural purposes or as the individual's place of residence. The construction,
52.22 maintenance, and repair of the drive-point well must comply with parts 4725.2010 to
52.23 4725.5650. This part does not grant authority for the individual to seal the drive-point
52.24 well. This part does not apply to drive-point water-supply wells constructed by a well
53.1 contractor, drive-point wells installed for purposes other than water supply, or to wells
53.2 other than drive-point wells installed by the property owner or lessee.

53.3 Subp. 2. **Notification.** Written notification of construction of a drive-point well
53.4 installed by a property owner must be filed with the commissioner within ten days after
53.5 completion of the well. The owner of the drive-point well must provide the following
53.6 information on a notification form provided by the commissioner:

53.7 (1) the name, address, and telephone number of the drive-point well owner
53.8 and property owner, if different;

53.9 (2) the legal description of the well location; and

53.10 (3) the date the well was constructed.

53.11 Subp. 3. **Retail sale of drive-point well screens.** A person who sells drive-point
53.12 well screens at retail must provide each buyer with a copy of the notification form and
53.13 informational materials provided by the department.

53.14 The commissioner shall provide copies of the drive-point notification form and
53.15 information about well regulations to retail sellers of drive-point well screens.

53.16 **4725.1851 WELL AND BORING RECORDS.**

53.17 Subpart 1. **General.** A licensee, registrant, or property owner or lessee for a well
53.18 constructed according to Minnesota Statutes, section 103I.205, subdivision 4, paragraph
53.19 (e), clause (1), must submit an accurate, verified, legible written record of well or boring
53.20 construction or sealing on forms ~~providing~~ provided by the commissioner, or in a format
53.21 approved by the commissioner, containing the information in subparts 2 to 4 within 30
53.22 days after completion of the work. A written construction record is not required for any

53.23 well or boring sealed within 30 days of the time construction began and for which a
53.24 sealing record is submitted.

53.25 A. A new or amended record is required if a notification or permit is required
53.26 under parts 4725.1820 to 4725.1838.

54.1 B. The licensee or registrant must furnish the owner or owner's agent one copy,
54.2 retain one copy, and submit the remaining copies to the commissioner, except that where
54.3 a local board of health has been delegated authority under Minnesota Statutes, section
54.4 103I.111, the remaining copies must be submitted to the delegated program.

54.5 C. A single record may be used to report more than one temporary monitoring
54.6 well, dewatering well, or environmental bore hole if all the wells or borings on the record
54.7 are located on a continuous parcel of property, the well or boring depths do not vary by
54.8 more than 25 feet, and the wells or borings terminate in the same geologic formation.
54.9 All wells or borings must be of the same type. A map must be attached to the record
54.10 containing multiple wells or borings, showing all well or boring unique numbers and
54.11 locations with distances and directions in relation to recognizable landmarks.

54.12 D. All depth measurements must be reported from the established ground
54.13 surface.

54.14 Subp. 2. **Construction records.** Construction records for wells and borings must
54.15 contain the information in subpart 3, items A to F, and the following information:

54.16 A. intended use;

54.17 B. depth;

54.18 C. drilling method;

54.19 D. casing material, diameter, and depth;

54.20 E. bore hole diameters and depths;

- 54.21 F. gravel pack and screen type and depth interval, or open hole interval;
- 54.22 G. static water level;
- 54.23 H. type, amount, and intervals of grout or sealing materials;
- 55.1 I. wellhead description including pitless adapter manufacturer and model if
55.2 installed, and type of casing protection if installed;
- 55.3 J. date of completion;
- 55.4 K. pump and pumping equipment description;
- 55.5 L. description of the geological materials penetrated by the well or boring
55.6 using terms in subpart 4;
- 55.7 M. hydrofractured interval if hydrofractured; and
- 55.8 N. drilling fluid used.

55.9 Subp. 3. **Sealing record.** A sealing record must be submitted for all wells and
55.10 borings sealed.

55.11 The sealing record must contain the following information:

- 55.12 A. name and address of the property owner, and the well owner if different;
- 55.13 B. name, license or registration number of the contractor doing the work, name
55.14 of the driller performing the work, and the signature of the certified representative;
- 55.15 C. date work was completed;
- 55.16 D. the county, township, range, section and three quartiles, and the property
55.17 street address, if assigned, of the well or boring;
- 55.18 E. a map showing the well or boring location with distances and directions in
55.19 relation to recognizable landmarks;

55.20 [For text of item F, see M.R.]

55.21 G. a description of the geological materials penetrated by the well or boring or
 55.22 a description of material penetrated by the nearest well or boring for which records are
 55.23 available, using terms in subpart 4;

55.24 [For text of items H to L, see M.R.]

56.1 M. a description of any obstruction or pump, if present;

56.2 N. the method of sealing the annular space around the casing, if present; and

56.3 O. a description of the wellhead completion before sealing was performed.

56.4 Subp. 4. **Geological materials.** The geological materials penetrated in drilling a
 56.5 well or boring must be reported. The person completing the record must include the rock
 56.6 and unconsolidated material types, color, and relative hardness. The grain size must be
 56.7 reported for unconsolidated materials and may be based on field observation without
 56.8 technical size measurement. Geological materials must be described using the terms in
 56.9 items A and B, terms contained in the Dictionary of Geological Terms, Third Revision, by
 56.10 the American Geological Institute, or ASTM Standard D2487-00.

56.11 A. Unconsolidated materials:

56.12	Material	Diameter	Diameter	Screen Slot No.	
56.13		Millimeters	Inches	From	To
56.14			Up to		
56.15	(1) Clay	Up to 0.005	0.0002	-	-
56.16	(2) Silt	0.005-0.062	0.0002-0.0025	-	-
56.17	(3) Fine Sand	0.062-0.250	0.0025-0.0100	2	10
56.18	(4) Medium Sand	0.250-0.500	0.0100-0.0200	10	20
56.19	(5) Coarse Sand	0.500-1.000	0.0200-0.0400	20	40
56.20	(6) Very Coarse	1.000-2.000	0.0400-0.0800	40	80

56.21 Sand

56.22	(7) Fine Gravel	2.000-4.000	0.0800-0.1600	80	160
56.23					160 and
56.24	(8) Coarse Gravel	4.000-62.500	0.1600-2.5000		larger
56.25	(9) Cobbles	62.500-250.000	2.5000-10.0000	-	-

57.1 B. Rock:

57.2 (1) basalt, which is a very fine-grained, dark igneous rock, commonly
 57.3 black, dark gray, or dark red-brown in which the mineral grains cannot be distinguished
 57.4 with the unaided eye;

57.5 (2) carbonate rock, which is a sedimentary rock consisting of limestone
 57.6 and dolomite or dolostone;

57.7 (3) dolomite or dolostone, which is a sedimentary rock composed primarily
 57.8 of the mineral dolomite (calcium-magnesium carbonate), which effervesces weakly in
 57.9 dilute hydrochloric acid;

57.10 (4) gabbro, which is a dark-colored, basic intrusive igneous rock comprised
 57.11 principally of basic plagioclase (commonly labradorite or bytownite) and clinopyroxene
 57.12 (augite);

57.13 (5) gneiss, which is a foliated rock formed by regional metamorphism, in
 57.14 which bands or lenticles of granular minerals alternate with bands or lenticles in which
 57.15 minerals having flaky or elongate prismatic habits predominate;

57.16 (6) granite, which is a plutonic rock in which quartz constitutes ten to 50
 57.17 percent of the felsic components and in which the alkali feldspar/total feldspar ratio is
 57.18 generally restricted to the range of 65 to 90 percent;

57.19 (7) iron formation, which is a chemical sedimentary rock, typically thin
57.20 bedded and/or finely laminated, containing at least 15 percent iron of sedimentary origin,
57.21 and commonly but not necessarily containing layers of chert;

57.22 (8) limestone, which is a sedimentary rock composed primarily of the
57.23 mineral calcite (calcium carbonate), which effervesces freely in dilute hydrochloric acid;

57.24 (9) metavolcanic (rock), which is a volcanic rock that shows evidence of
57.25 having been subjected to metamorphism;

58.1 (10) quartzite, which is a very hard sandstone, consisting chiefly of quartz
58.2 grains that have been so completely and solidly cemented with secondary silica that
58.3 the rock breaks across or through the grains rather than around them, or a granoblastic
58.4 metamorphic rock consisting mainly of quartz, which is formed by recrystallization of
58.5 sandstone or chert by metamorphism;

58.6 (11) sandstone, which is a sedimentary rock consisting of cemented or
58.7 otherwise compacted sediment composed predominantly of sand-sized particles generally
58.8 of quartz;

58.9 (12) schist, which is a strongly foliated crystalline rock, formed by dynamic
58.10 metamorphism, that can be readily split into thin flakes or slabs due to the well-developed
58.11 parallelism of more than 50 percent of the minerals;

58.12 (13) shale, which is a sedimentary rock consisting of compacted or
58.13 cemented silt and clay;

58.14 (14) slate, which is a fine-grained, hard, dark-colored metamorphic rock
58.15 derived from shale, which typically is gray and which splits readily into flat pieces; and

58.16 (15) volcanic (rock), which is a generally finely crystalline or glassy
58.17 igneous rock resulting from volcanic action at or near the earth's surface.

58.18 **4725.1855 CUTTING FORMATION SAMPLES.**

58.19 A licensee or registrant must submit cutting samples as specified in this part when the
58.20 commissioner determines that samples are needed to provide subsurface geological and
58.21 hydrological information for the state water information system.

58.22 A. The commissioner shall notify licensees and registrants of the areas from
58.23 which cutting samples are required and provide licensees and registrants operating within
58.24 the areas with maps or lists indicating counties, townships, sections, or other designated
58.25 areas where cutting samples are required.

59.1 B. Licensees and registrants so notified and supplied shall collect cutting
59.2 samples during the course of drilling in the designated areas according to the requirements
59.3 specified. Licensees or registrants not supplied with sample collecting materials but who
59.4 drill in an area designated for sampling shall notify the commissioner. Licensees or
59.5 registrants shall collect the cutting samples in a manner representative of the materials
59.6 encountered. Samples must be taken at five-foot intervals and at every change in
59.7 geological material type. The cuttings must be placed in the sample bags provided,
59.8 which shall have an attached tag on which the unique number, owner's name, location,
59.9 and sample depth must be written.

59.10 C. Licensees or registrants shall notify the commissioner within 30 days of
59.11 completion of work, so that the cutting samples can be collected. Until collected, the
59.12 licensee or registrant shall store the samples protected from weather and disturbance and
59.13 segregated by unique number and depth interval.

59.14 **WELL AND BORING GENERAL CONSTRUCTION AND USE REQUIREMENTS**

59.15 **4725.2010 APPLICABILITY.**

59.16 The general construction and use requirements specified in parts 4725.2010 to
59.17 4725.3875 apply to all wells and borings except exploratory borings regulated under
59.18 chapter 4727. The additional requirements or exemptions in parts 4725.4050 to

59.19 4725.6050 apply to water-supply wells. The additional requirements or exemptions in
59.20 part 4725.6150 apply to dewatering wells. The additional requirements or exemptions in
59.21 parts 4725.6450 to 4725.6850 apply to monitoring wells and cased environmental bore
59.22 holes. The additional requirements or exemptions in part 4725.7050 apply to vertical
59.23 heat exchangers. The additional requirements or exemptions in part 4725.7250 apply to
59.24 elevator borings. The additional requirements or exemptions in part 4725.7450 apply to
59.25 environmental bore holes.

59.26 **4725.2020 INTERCONNECTION OF AQUIFERS PROHIBITED.**

60.1 Subpart 1. **Aquifer interconnections.** A well or boring must not be constructed to
60.2 interconnect aquifers separated by a confining layer or interconnect an unconsolidated
60.3 aquifer and a bedrock aquifer.

60.4 Subp. 1a. **Open bore hole, gravel pack, or screen in a confining layer.** A well or
60.5 boring must not have open bore hole, gravel pack, or screen ~~extend~~ extending through
60.6 more than:

60.7 A. ten feet of a confining layer, except for the Decorah or Glenwood formations;

60.8 B. two feet of the Decorah or Glenwood formations; and

60.9 C. 50 percent of the confining layer.

60.10 ~~The provisions of this subpart do not apply in an area designated on a map published~~
60.11 ~~by the commissioner.~~ The commissioner may establish less stringent standards than
60.12 identified in this subpart where protective conditions exist or unique characteristics of
60.13 the confining layer exist, including low permeability overlying materials, favorable
60.14 groundwater gradients, the presence of fractures or permeable horizons in the confining
60.15 layer, or reduced contaminant loading in recharge areas. The areas subject to less stringent
60.16 standards under this provision will be designated on a map published by the commissioner,
60.17 along with the standards that do apply to those areas.

60.18 Subp. 2. [See repealer.]

60.19 Subp. 3. [See repealer.]

60.20 **4725.2050 USE OF WELLS OR BORINGS FOR DISPOSAL OR INJECTION**
 60.21 **PROHIBITED.**

60.22 A well or boring must not be used for disposal or injection of surface water,
 60.23 groundwater, or any other liquid, gas, or chemical, except for groundwater thermal
 60.24 exchange devices, drilling fluids, vertical turbine prelubrication water, treatment
 60.25 chemicals, priming water, water used for hydrofracturing, and water used for disinfection
 60.26 according to parts 4725.1831, 4725.2950, 4725.3250, 4725.3725, 4725.5050, 4725.5475,
 61.1 and 4725.5550. This does not prohibit the injection of air for drilling, development, or
 61.2 sparging.

61.3 [For text of items A and B, see M.R.]

61.4 **4725.2150 REQUIRED DISTANCE FROM GAS PIPES, LIQUID PROPANE**
 61.5 **TANKS, AND ELECTRIC LINES.**

61.6 Subpart 1. **General distance.** The minimum isolation distances in item A or B must
 61.7 be maintained during construction, repair, or sealing of a well or boring, and installation of
 61.8 a pipe with flammable or volatile gas, an overhead or underground electric transmission,
 61.9 distribution, service, supply, feeder, branch, or conductor line hereafter called "electric
 61.10 line" or "line," or a liquid propane tank. The distances are measured horizontally from the
 61.11 closest part of the well or boring to the closest part of the pipe, tank, or line; or closest
 61.12 part of the vertical projection on the earth of an overhead or buried pipe, tank, or line.
 61.13 The minimum isolation distance between a well or boring and a pipe with flammable or
 61.14 volatile gas, an electric line, or a liquid propane tank is:

61.15 A. ten feet; or

61.16 B. five feet if:

61.17 (1) the person constructing the well or boring, or the person installing the
61.18 pipe, line, or tank, marks the well or boring with a permanent sign warning of the location
61.19 of the electric line, liquid propane tank, or gas pipe; and

61.20 (2) during construction or sealing of the well or boring:

61.21 (a) the electric line has been de-energized and visibly grounded, or
61.22 insulating barriers not a part of, or an attachment to, the equipment or machinery have been
61.23 erected to prevent physical contact with the line during well or boring construction; and

61.24 (b) the propane tank does not contain flammable or volatile gas.

61.25 Subp. 2. [See repealer.]

62.1 Subp. 3. **Exceptions.** Subpart 1 does not apply to:

62.2 A. an electrical service line for the well or boring;

62.3 B. a television, fiber optic, or other low voltage electric line with a voltage
62.4 less than 50 volts;

62.5 C. a temporary liquid propane tank used during the construction, repair, or
62.6 sealing of a well or boring;

62.7 D. an overhead electric line when the repairing or sealing of a well or boring
62.8 does not involve the use of a drilling machine or hoist; or

62.9 E. a buried electric line or buried gas pipe when the repairing or sealing of a
62.10 well or boring does not involve excavation.

62.11 The requirements of this part are minimum standards, and do not exempt persons from
62.12 more restrictive requirements of the Occupational Safety and Health Administration.

62.13 **4725.2175 LOCATION OF WELL OR BORING WITHIN BUILDING.**

62.14 Subpart 1. **Location in a building.** A well or boring must not be located within a
62.15 building, and a building must not be constructed to enclose a well or boring, unless the

62.16 building (well house) meets the requirements of this part. Environmental bore holes
62.17 and monitoring wells are exempt from this subpart if sealed within 72 hours of the time
62.18 construction begins on the well or boring.

62.19 **Subp. 2. Requirements for a building (well house) containing a well or boring.**

62.20 A building (well house) containing a well or boring must:

62.21 A. have adequate access for a drilling machine and hoist to construct, maintain,
62.22 repair, and seal the well or boring;

62.23 B. be constructed at or above the established ground surface. If a floor drain is
62.24 installed, it must discharge to the established ground surface, a gravel pocket, or a sewer
62.25 constructed to prevent backup of sewage within 50 feet of the well or boring;

63.1 C. not be used to store materials or chemicals that may cause contamination
63.2 of the well, boring, or groundwater, including fertilizers, pesticides, petroleum products,
63.3 paints, and cleaning solvents;

63.4 D. have a concrete floor sloped to divert water away from the casing;

63.5 E. have a watertight gasket or caulk between the casing and the floor;

63.6 F. have any door hinged to swing outward;

63.7 G. be constructed according to this part exclusively to contain and protect the
63.8 well, boring, pump, and water treatment equipment and water treatment chemicals; no
63.9 other uses of the building are permitted; and

63.10 H. not be contained in, or part of, another building, except that a well house
63.11 may be constructed with not more than one wall in common with another building. The
63.12 common wall must not allow access to, or be open to, the well house.

63.13 **Subp. 3. Requirements for a well or boring inside a building.** A well or boring
63.14 located in a separate building (well house) must:

63.15 A. have casing extending at least 12 inches above the established ground
63.16 surface, and at least 12 inches above the building floor; and

63.17 B. be located according to part 4725.2185, except that this does not apply to
63.18 a removable well house.

63.19 **4725.2185 DISTANCE FROM A BUILDING.**

63.20 A minimum horizontal isolation distance of three feet must be maintained between
63.21 a well or boring and the farthest exterior projection of a building, including the walls,
63.22 roofs, decks, overhangs, and other permanent structures unless the well or boring is
63.23 located in a building constructed according to part 4725.2175. A building, deck, or other
63.24 permanent structure, except a well house, must not be built to enclose a well or boring.
63.25 The well or boring must be accessible for repair and sealing. Environmental bore holes
64.1 and monitoring wells are exempt from this subpart if sealed within 72 hours of the time
64.2 construction begins on the well or boring.

64.3 **4725.2250 GENERAL CASING REQUIREMENTS.**

64.4 Subpart 1. **Casing types.** Permanent casing installed in a well or boring must be:

64.5 A. steel casing as specified in part 4725.2350;

64.6 B. stainless steel casing as specified in part 4725.6650 when used for a
64.7 monitoring well, environmental bore hole, or remedial well;

64.8 C. flush threaded polyvinyl chloride casing as specified in part 4725.6650 when
64.9 used for a monitoring well or environmental bore hole; or

64.10 D. plastic casing as specified in part 4725.2550.

64.11 Subp. 2. **Watertight casing required.** All casing couplings and casing joints must
64.12 be watertight throughout ~~its length~~ their lengths. Casing must not have holes, cracks,
64.13 or separations.

64.14 Subp. 2a. **Casing joints.** All casing joints must be watertight, with threaded,
64.15 welded, or solvent welded joints, and comply with the standards in part 4725.2350,
64.16 4725.2550, or 4725.6650.

64.17 A. Threaded joints must have recessed couplings, reamed and drifted couplings,
64.18 or other couplings that match the design, taper, and thread type of the casing. Thread must
64.19 not be exposed on the pipe when the casing is joined.

64.20 B. Welded casing, except where an approved welding coupling is used, must
64.21 have beveled joints. The weld must extend the full circumference of the casing and must
64.22 completely fill the bevel.

64.23 C. Welding couplings must be made of material equivalent to the casing. The
64.24 upper and lower welds must extend the full circumference of the casing, and completely
65.1 fill the gap between the coupling and casing. Welding the casing to the inside of the
65.2 coupling is prohibited.

65.3 Subp. 3. **New casing required.** Casing used in the permanent construction of a well
65.4 or boring must be new casing produced to the specifications of this part. Casing salvaged
65.5 from the same type of well or boring within 120 days of installation is acceptable for reuse
65.6 if it meets the specifications for new casing. A potable water well must be constructed
65.7 with new casing or casing salvaged from a potable water well.

65.8 Subp. 4. **Casing markings required.** Steel and plastic permanent casing except
65.9 flush-threaded PVC and stainless steel casing must be marked by the manufacturer in
65.10 accordance with casing specifications in parts 4725.2350 to 4725.2550. Markings must be
65.11 rolled, stamped, or stenciled by the manufacturer.

65.12 [For text of subp 5, see M.R.]

65.13 Subp. 6. **Casing rejection.** The commissioner shall reject casing for use in a well or
65.14 boring if:

65.15 [For text of item A, see M.R.]

65.16 B. the casing fails to meet the specifications in part 4725.2350, 4725.2550, or
65.17 4725.6650; or

65.18 C. the lot of casing contains defective lengths, including casing with
65.19 girth-welded joints, or welded patches, or the lot has more than five percent of the casings
65.20 with lengths less than five feet.

65.21 Subp. 7. **Temporary casing.** Casing installed temporarily during drilling is not
65.22 required to meet the specifications for casing in part 4725.2350, 4725.2550, 4725.6650,
65.23 or this part except subparts 2, 7, and 16, but must be of sufficient strength to withstand
65.24 the structural load imposed by conditions both inside and outside the well or boring,
66.1 and free of oil or other contaminants. The casing must be removed on completion of
66.2 the well or boring.

66.3 Subp. 8. **Inner and outer casing.** The inside diameter of an outer casing must
66.4 be at least 3.0 inches larger than the outside diameter of the inner casing, couplings, or
66.5 bell-end, whichever is larger, except that the inside diameter of an outer casing must be at
66.6 least 3.5 inches larger than the outside diameter of the inner casing, couplings, or bell end,
66.7 whichever is larger, for inner casings deeper than 100 feet and larger than 12 inches inside
66.8 diameter. The annular space between an inner casing and an outer casing must be grouted
66.9 for its entire length by pumping neat-cement grout or cement-sand grout through a tremie
66.10 pipe or through the casing as specified in part 4725.3050. The inner casing must extend
66.11 above the established ground surface at least 12 inches.

66.12 Subp. 9. **Outer casing in unconsolidated materials.** A permanent outer steel
66.13 casing installed in unconsolidated materials is not required to meet the requirements of
66.14 this part except subparts 2, 9, and 17, or the material specifications for casing in part
66.15 4725.2350 if the casing is of sufficient strength to withstand the structural load imposed
66.16 by conditions both inside and outside the well or boring, the casing is free of oil or other

66.17 contaminants, an inner casing meeting the requirements of this chapter is installed, and the
66.18 annular space between the casings is filled with neat-cement grout, or cement-sand grout.
66.19 The outer casing must be installed in accordance with part 4725.3050, subpart 3 or 5.

66.20 Subp. 10. **Casing inside diameter.** The inside diameter of a permanent casing must
66.21 not be less than two inches for a well or boring greater than 50 feet in depth.

66.22 Subp. 11. **Casing height.** A casing or casing extension must extend vertically at
66.23 least 12 inches above the established ground surface, the floor of a building (well house)
66.24 as specified in part 4725.2175, or a concrete slab, except that the casing for a hand
66.25 pump may terminate a minimum of six inches above a concrete slab in accordance with
66.26 part 4725.3250, item A, if the concrete slab is at least six inches above the established
67.1 ground surface. The established ground surface, slab, or floor immediately adjacent to
67.2 the casing must be graded to divert water away from the casing. Termination of the top
67.3 of the casing below the established ground surface, such as in a well pit, is prohibited
67.4 except that an outer casing may terminate immediately below a pitless adapter installed
67.5 on an inner casing.

67.6 [For text of subp 12, see M.R.]

67.7 Subp. 13. **Multiple casings.** Except for inner and outer casings installed in
67.8 accordance with subpart 8, multiple casings must not be installed in a single bore hole.

67.9 Subp. 14. **Casing reduction and enlargement.** A casing must maintain the same
67.10 inside diameter throughout the length of the casing, except that a larger diameter pitless
67.11 unit may be installed.

67.12 Subp. 15. **Casing drive shoes.** A drive shoe must be installed on driven casing
67.13 except for a drive-point casing, temporary casing, or outer casing that has a neat-cement or
67.14 cement-sand grouted inner casing. The drive shoe must:

67.15 A. be made of steel or iron, with a hardened, beveled cutting edge;

67.16 B. have a wall thickness equal to or larger than the casing thickness; and

67.17 C. be threaded or welded to the bottom of the casing.

67.18 Subp. 16. **Temporary cap or cover required.** Until a well or boring is completed
67.19 and a permanent cap or cover installed, the installer must temporarily cap or cover the
67.20 bore hole, casing, and annular space of a well or boring when not actively working on
67.21 the well or boring, in accordance with subpart 17, or install a weatherproof, tamper-proof
67.22 cover. An overlapping steel plate is permitted. Tape, pails, loose plastic, or similar covers
67.23 are not permitted.

67.24 Subp. 17. **Permanent cap or cover required.** A permanent watertight and
67.25 vermin-proof cap or cover must be installed on the inner casing of a well or boring. The cap
68.1 or cover must be constructed of metal or plastic materials having a thickness comparable
68.2 to the casing requirements specified in subpart 1. The cap or cover must consist of:

68.3 A. an overlapping cover or cap;

68.4 B. a threaded plug, cover, or plate;

68.5 C. a welded or solvent welded overlapping plate or cover;

68.6 D. an extension of the casing at least one inch into the base of a power pump; or

68.7 E. a sanitary seal or plug with a one-piece top plate, compression gasket,
68.8 and noncorrodible draw bolt(s). If the well or boring is in a building that meets
68.9 the requirements in part 4725.2175, a two-piece top plate, compression gasket, and
68.10 noncorrodible draw bolts may be used.

68.11 **4725.2350 STEEL CASING REQUIREMENTS.**

68.12 Subpart 1. **General.** Steel casing used in the permanent construction of a well or
68.13 boring must be new casing produced to:

68.14 A. ASTM Standard ~~A53M-04~~ A53/A53M-04a;

68.15 B. ASTM Standard A589-96 (2001), Types I, II, and III; or

68.16 C. API Standard 5L-04.

68.17 Steel casing must have the minimum weights and thicknesses specified in the table in
68.18 subpart 2 subject to the tolerances in the specifications in this subpart.

68.19 [For text of subp 2, see M.R.]

68.20 **4725.2550 PLASTIC CASING AND COUPLING REQUIREMENTS.**

68.21 Subpart 1. **General requirements.** Plastic casing and couplings used in the
68.22 permanent construction of a well or boring must:

69.1 A. meet ASTM Standard F480-02, except that flush threaded polyvinyl chloride
69.2 casing must not be used except for a monitoring well or environmental bore hole; and

69.3 B. withstand internal pressures of 200 pounds per square inch (psi).

69.4 Standard dimension ratios (SDR) and water pressure ratings (PR) at 23 degrees
69.5 Celsius (73 degrees Fahrenheit) for nonthreaded polyvinyl chloride (PVC) and
69.6 acrylonitrile-butadiene-styrene (ABS) plastic casing equal to or greater than 200 psi are
69.7 as follows:

69.8 (1) pressure rating of PVC casing materials:

69.9	SDR	PVC 1120	PVC 1220	PVC 2112	PVC 2116	PVC 2120
69.10	13.5	315 psi	315 psi	200 psi	250 psi	315 psi
69.11	17	250 psi	250 psi	-	200 psi	250 psi
69.12	21	200 psi	200 psi	-	-	200 psi

69.13 (2) pressure rating of ABS casing materials:

69.14	SDR	ABS 1316	ABS 2112
69.15	13.5	250 psi	200 psi
69.16	17	200 psi	-

69.17 The sources of the pressure rating in item B are the American Society for Testing and
69.18 Materials Standard D2241-04a "Standard Specifications for Poly(Vinyl Chloride) (PVC)
69.19 Pressure-Rated Pipe (SDR Series)" Table XI.I Standard Thermoplastic Pipe Dimension
69.20 Ratios (SDR) and Water Pressure Rating (PR) at 73 degrees Fahrenheit (23 degrees
69.21 Celsius) for Nonthreaded Plastic Pipe; and Standard D2282-99e "Standard Specification
69.22 for Acrylonitrile-Butadiene-Styrene (ABS) Plastic Pipe (SDR-PR)," Table XI.I Standard
69.23 Plastic Pipe Dimension Ratios (SDR) and Water Pressure Ratings (PR) at 73 degrees
69.24 Fahrenheit (23 degrees Celsius) for Nonthreaded ABS Plastic Pipe.

70.1 Subp. 2. **Additional approved fittings and couplings.** In addition to the plastic
70.2 couplings approved under subpart 1, the following fittings and couplings may be used to
70.3 connect a steel pitless unit or screen to plastic casing:

70.4 A. fittings or couplings with socket dimensions meeting the requirements of
70.5 ASTM Standard F480-02, Table 3 and having a water pressure rating of at least 200 psi;

70.6 B. Schedule 40, slip x internal thread fittings, four-inch and smaller meeting
70.7 the requirements of ASTM D2466-02; or

70.8 C. Schedule 40, slip x internal thread fittings and slip x external thread fittings,
70.9 five-inch diameter meeting the requirements of ASTM D2466-02.

70.10 Subp. 3. **Compliance with ANSI/NSF standard required.** All plastic casings,
70.11 couplings, components, and related joining materials including solvents, cements, or
70.12 primers used in the construction of a well or boring must conform with the requirements
70.13 of ANSI/NSF Standard 61-2003e or the health effects portion of ANSI/NSF Standard
70.14 14-2003 and be tested as conforming by an agency certified by the ANSI. Conformance to
70.15 the ANSI/NSF standard must be coded, stamped, or marked on the casings, couplings,
70.16 components, and related joining materials including solvents, cements, or primers.

70.17 **4725.2650 PLASTIC CASING INSTALLATION.**

70.18 [For text of subps 1 to 7, see M.R.]

70.19 Subp. 8. **Drilling inside permanent plastic casing prohibited.** A person must not
70.20 drill inside permanent plastic casing. Drilling tools such as drill bits must not be inserted
70.21 in plastic casing. This prohibition does not include the installation or repair of screens or
70.22 development of the well or boring.

70.23 Subp. 9. **Limestone, dolomite restriction.** Plastic casing must not be used as an
70.24 outside casing in wells and borings cased more than five feet into limestone or dolomite
71.1 bedrock. In limestone and dolomite bedrock, plastic casing may be used as an inner casing
71.2 if surrounded for the entire length by an outer steel casing.

71.3 Subp. 9a. **Plastic cased wells or borings completed in bedrock.** A plastic cased
71.4 well or boring completed in bedrock, whether screened or open hole, must be cased into
71.5 the bedrock a minimum of five feet and the annular space surrounding the casing in
71.6 bedrock must be filled with neat-cement grout or cement-sand grout according to part
71.7 4725.3050, subpart 7.

71.8 [For text of subps 10 and 11, see M.R.]

71.9 **4725.2750 SCREENS; SCREEN LEADERS, RISERS, AND SUMPS.**

71.10 If a screen is attached or connected to the casing, the connection must be made by
71.11 a threaded, solvent-welded, or welded joint, or by a nontoxic packer. Lead packers
71.12 must not be used. A screen riser or leader must not extend more than 21 feet above the
71.13 screen. A screen sump must not extend more than ten feet below the screen. The total
71.14 combined length of screen riser or leader and screen sump must not exceed 21 feet. A
71.15 screen riser, leader, or screen sump must comply with the confining layer requirements
71.16 of part 4725.2020, subpart 1a. Multiple screens separated by a screen riser, leader, or
71.17 sump are not permitted.

71.18 **4725.2850 GRAVEL PACKS.**

71.19 Gravel packs, filter sand, or stabilizer materials must be comprised of mineral
71.20 material or inert, nontoxic artificial materials, contain less than five percent calcareous
71.21 material, and must be graded, cleaned, and washed. Gravel packs, filter sand, or stabilizer
71.22 materials must not extend:

71.23 A. more than ten feet above the static water level;

71.24 B. more than ten feet above the top or below the bottom of the screen when a
71.25 screen riser, leader, or screen sump is not installed;

72.1 C. above a screen riser or leader, or below a screen sump;

72.2 D. through a confining layer in violation of part 4725.2020, subpart 1a; or

72.3 E. through more than ten feet of open hole.

72.4 **4725.2950 DRILLING FLUIDS.**

72.5 Subpart 1. **Water.** Water used for drilling, development, hydrofracturing, sealing,
72.6 repair, or rehabilitation, other than water from the well or boring itself, must:

72.7 A. come from a potable water system or from a well or boring of similar use
72.8 and construction;

72.9 B. contain a free chlorine residual at all times, except for monitoring wells and
72.10 remedial wells where chlorine will interfere with water quality analysis or remediation; and

72.11 C. be conveyed and stored in clean, sanitary tanks and water lines.

72.12 Subp. 2. **Drilling additives.** Drilling additives, including bentonite, must meet the
72.13 requirements of ANSI/NSF Standard 60-2003e as determined by a person accredited by
72.14 the ANSI under ANSI Standard Z34.1-1993. A drilling additive is a substance added to
72.15 the air or water used in the fluid system of drilling a well or boring.

72.16 **4725.3050 GROUTING.**

72.17 Subpart 1. **Grouting materials.** The following grout materials as listed in part
72.18 4725.0100 are approved for filling an annular space between unconsolidated material
72.19 or bedrock and a casing:

72.20 A. neat-cement grout, except that rapid setting cement must not be used with
72.21 plastic casing;

72.22 B. cement-sand grout; and

72.23 C. bentonite grout when used in unconsolidated materials.

73.1 Subp. 2. **Grouting requirements and methods.** The following general
73.2 requirements apply to the grouting of wells and borings.

73.3 A. Grouting must start immediately on completion of drilling and be completed
73.4 before placing a well or boring in service.

73.5 B. The annular space to be grouted must be protected from collapse and the
73.6 introduction of materials other than grout.

73.7 C. A steel plate, or a nontoxic metal, rubber, or plastic grout basket may
73.8 be attached to the casing within ten feet of the bottom. Wood, burlap, or other organic
73.9 material must not be used.

73.10 D. Grout must be pumped under pressure into the annular space from the
73.11 bottom up to the established ground surface or base of the pitless adapter or unit. Grout
73.12 must be pumped through the casing or through a tremie pipe placed within ten feet of the
73.13 bottom of the space to be grouted. The tremie pipe may be retracted as grouting proceeds;
73.14 however, the bottom of the tremie pipe must remain submerged in grout while grouting.

73.15 E. Grout flowing out of the annular space at the surface must meet the minimum
73.16 specifications and densities in this chapter before grouting may stop.

73.17 F. Dumping of grout is not allowed except when the depth of the space to
73.18 be grouted is less than ten feet.

73.19 Subp. 2a. **Wait on cement.** Neat-cement grout or cement-sand grout must be
73.20 allowed to set a minimum of 24 hours. Rapid setting cement must be allowed to set a
73.21 minimum of 12 hours. Drilling, development, or pump operation is prohibited during the
73.22 time the cement is setting.

73.23 Subp. 3. **Grouting depth requirement.** When constructing a well or boring with a
73.24 method such as mud or air rotary, auger, or jetting that creates an open annular space or
73.25 drills a bore hole larger than the casing or casing couplings outside diameter, a grouting
74.1 material specified in subpart 1 and the grouting methods specified in subpart 2 must be
74.2 used to fill the annular space between the casing and the bore hole.

74.3 A. If the depth of the casing is 50 feet or less, the grout must extend from the
74.4 bottom of the casing, top of the bentonite seal as specified in subpart 8, or top of the gravel
74.5 pack, to the established ground surface, or the base of the pitless adapter or unit.

74.6 B. If the depth of the casing is more than 50 feet, the annular space below
74.7 50 feet must be filled with grout, except that the portion of the well or boring in an
74.8 unconsolidated formation below 50 feet in depth may be filled with cuttings. The cuttings
74.9 must be placed without bridging, and must be the unconsolidated materials taken from the
74.10 bore hole. The annular space above 50 feet must be filled from:

74.11 (1) a depth of at least 50 feet to the established ground surface or the
74.12 base of a pitless adapter or unit; or

74.13 (2) the top of the bentonite seal as specified in subpart 8 or the top of the
74.14 gravel pack to the established ground surface or the base of a pitless adapter or unit.

74.15 Subp. 4. **Grouting between casings.** The annular space between an inner and outer
74.16 casing must be filled with neat-cement grout or cement-sand grout according to subpart 2.

74.17 Subp. 5. **Driving casing.** When driving casing in an unconsolidated formation, a
74.18 cone-shaped depression or temporary outer casing filled with bentonite grout, bentonite
74.19 powder, or granular bentonite must be maintained around the outside of the casing. The
74.20 bottom of driven casing, except for a drive-point, temporary casing, or outer casing that
74.21 has a neat-cement or cement-sand grouted inner casing must be equipped with a drive shoe
74.22 in accordance with part 4725.2250, subpart 15. Casing may only be driven through:

74.23 A. an unconsolidated formation;

74.24 B. sandstone bedrock including the St. Peter, Jordan, Franconia,
74.25 Iron-ton-Galesville, Mt. Simon, Hinckley, or Fond du Lac formations;

75.1 C. ten feet or less of limestone or dolomite bedrock including the Cedar Valley
75.2 through Galena groups, the Platteville formation, or the Prairie du Chien group;

75.3 D. ten feet or less of the St. Lawrence or Eau Claire confining layers; and

75.4 E. two feet or less of the Decorah or Glenwood confining layers.

75.5 Subp. 6. **Sealing bore hole below screen.** If a bore hole extends more than ten feet
75.6 below the bottom of a screen, the bore hole must be filled with grout from the bottom of
75.7 the bore hole to within ten feet or less of the screen.

75.8 Subp. 7. **Grouting in bedrock.** The additional requirements in items A to C apply
75.9 to grouting a well or boring in bedrock.

75.10 A. When bedrock is encountered in the construction of a well or boring, the
75.11 casing must be equipped with a drive shoe driven firmly into stable bedrock or the casing
75.12 must be grouted with neat-cement grout, or cement-sand grout from the bottom of the
75.13 casing to the top of the bedrock.

75.14 B. When the casing of a well or boring extends more than ten feet into bedrock,
75.15 or extends through any portion of a bedrock confining layer, the casing must be installed
75.16 in a bore hole 3.0 inches larger, or 3.5 inches larger for casings deeper than 100 feet and

75.17 larger than 12 inches inside diameter, than the outside diameter of the casing or couplings,
75.18 whichever is larger, and the annular space in bedrock must be grouted with neat-cement
75.19 grout or cement-sand grout, except that steel casing may be driven more than ten feet
75.20 in a sandstone formation.

75.21 C. If a cavern more than twice the diameter of the bore hole exists or the grout
75.22 level fails to rise after insertion of either more than one cubic yard of grout or the quantity
75.23 of grout necessary to fill ten vertical feet of hole, then the following grouting materials and
75.24 methods may also be used in the portions where the conditions exist:

76.1 (1) pouring of a mixture of gravel or stone aggregate not larger than
76.2 one-half inch in diameter while simultaneously pumping neat-cement grout or cement-sand
76.3 grout through a tremie pipe in a ratio not to exceed five parts aggregate to one part grout;

76.4 (2) pumping a mixture of gravel or stone aggregate not larger than one-half
76.5 inch in diameter and cement-sand grout or neat-cement grout in a ratio not to exceed five
76.6 parts gravel or aggregate to one part Portland cement; or

76.7 (3) pumping of alternate, equal thickness layers of cement-sand grout or
76.8 neat-cement grout and pouring gravel or stone aggregate not larger than one-half inch in
76.9 diameter. Individual layers of aggregate must not exceed ten feet in thickness. Aggregate
76.10 must not be emplaced in a confining layer.

76.11 Neat-cement grout or cement-sand grout must be pumped through the casing or
76.12 through a tremie pipe. The aggregate must be poured into the bore hole at a rate that
76.13 prevents bridging.

76.14 Subp. 8. **Bentonite seal between gravel pack and grout.** A layer of bentonite
76.15 pellets, bentonite chips, or granular bentonite not to exceed five feet in thickness is
76.16 allowed between a gravel pack and grout. The bentonite pellets, bentonite chips, or
76.17 granular bentonite must not extend into a confining layer or extend more than ten feet
76.18 above the static water level, and must be poured without voids or bridging. A tremie pipe

76.19 must be inserted to within ten feet of the top of the pellets, chips, or granular bentonite,
76.20 and the annular space grouted to the established ground surface or base of the pitless
76.21 unit or adapter.

76.22 **4725.3150 CASING CONNECTIONS AND CAPS.**

76.23 Subpart 1. **Casing connections and caps 12 inches above ground.** A connection or
76.24 fitting 12 inches or more above the established ground surface into the top or side of a
76.25 casing must be constructed to be weatherproof and insect proof. The connection, including
77.1 a cap, cover, electrical connection, water treatment connection, discharge piping, vent,
77.2 access pipe, or other connection to the casing must consist of:

- 77.3 A. a threaded connection;
- 77.4 B. a welded or solvent welded connection;
- 77.5 C. a rubber expansion sealer;
- 77.6 D. a bolted flange with rubber gasket;
- 77.7 E. an overlapping cap or cover with compression gasket;
- 77.8 F. an extension of the casing at least one inch into the base of a pump; or

77.9 G. a sanitary well seal with a one-piece top plate, compression gasket, and
77.10 noncorrodible draw bolts. The cap or seal must be equivalent to the casing in weight
77.11 and strength. If the well or boring is in a building that meets the requirements in part
77.12 4725.2175, a two-piece top plate, compression gasket, and noncorrodible draw bolts
77.13 may be used.

77.14 Subp. 2. **Casing connections less than 12 inches above ground.** A connection to,
77.15 or a fitting on a casing made less than 12 inches above the established ground surface must
77.16 be constructed to be watertight, vermin-proof, and provide complete clearance within
77.17 the internal diameter of the casing. The connection must not be submerged in water at

77.18 the time of installation. The connection must be made at or above the frost line. The
77.19 connection or fitting must consist of a:

77.20 A. threaded connection equivalent to the material and threading standards of
77.21 ASTM ~~A53M-04~~ A53/A53M-04a, ASTM A589-96 (2001), API Standard 5L-04, ASTM
77.22 ~~A312/A312M-04a~~ A312/A312M-04b, or ASTM F480-02;

77.23 B. welded connection for steel or stainless steel casing where:

77.24 (1) the welded fitting must:

78.1 (a) be made of forged or machined metal; a cast-iron fitting is not
78.2 allowed;

78.3 (b) be certified for use with pressure-rated vessels or piping;

78.4 (c) be marked with the design pressure rating and manufacturer;

78.5 (d) be made of metal compatible with the casing material;

78.6 (e) have a design pressure rating equal to or greater than the casing;

78.7 (f) fully integrate branch reinforcement and maintain full casing
78.8 strength by providing casing reinforcement, with reinforcement tapering at the sides
78.9 of the fitting;

78.10 (g) have a contour matching the curvature of the casing; and

78.11 (h) be self-aligning;

78.12 (2) the installer of a welded fitting must:

78.13 (a) complete the weld free of slag, inclusions, bubbles, voids, or other
78.14 imperfections;

78.15 (b) use a guide or template for cutting the hole in the casing, or use a
78.16 properly sized drilled hole;

78.17 (c) install the welded fitting in accordance with the manufacturers
78.18 recommendations; and

78.19 (d) field-weld the fitting by holding the welding rod in a vertical or
78.20 horizontal position, or bench-weld the fitting before field installation, with a welding
78.21 rod as corrosion-resistant as the casing;

78.22 C. solvent welded connection for plastic casing equivalent to the standards of
78.23 ASTM F480-02, or part 4725.2550;

78.24 D. bolted sleeve-type coupling meeting ANSI/AWWA Standard C219-01 where:

79.1 (1) the bolted sleeve-type coupling must:

79.2 (a) have a working pressure rating of at least 150 pounds per square
79.3 inch;

79.4 (b) have an interior coating that complies with ANSI/NSF Standard
79.5 61-2003e if the coupling has an interior coating in contact with water; and

79.6 (c) provide for the casing or pipe to extend at least 2.5 inches into
79.7 the coupling;

79.8 (2) the installer of a bolted sleeve-type coupling must:

79.9 (a) install the coupling in accordance with ANSI/AWWA Standard
79.10 C219-01; and

79.11 (b) insert the casing or pipe ends at least 2.5 inches into the coupling; or

79.12 E. pitless adapter or pitless unit meeting the requirements of part 4725.4850,
79.13 subpart 1. A welded, solvent welded, or threaded coupling, adapter, or swaged fitting
79.14 meeting the material standards of part 4725.2350, 4725.2550, or 4725.6650 may be used
79.15 to connect a casing to a pitless adapter or unit.

79.16 Subp. 3. **Electrical connections.** Electrical wire must enter a casing, cap, cover,
79.17 or pump base a minimum of 12 inches above the established ground surface except for a
79.18 well or boring completed at-grade in accordance with part 4725.6850. Electrical wires
79.19 above the ground surface must be contained within a conduit or the casing. The electrical
79.20 wire connection through the casing, cap, cover, or pump base must be made watertight and
79.21 vermin-proof with a compression fitting, gasket, or electrical conduit installed according
79.22 to Minnesota Statutes, section 326.243, or caulk meeting the standards of ANSI/NSF
79.23 Standard 14-2003 or 61-2003e.

79.24 **4725.3250 PUMPS AND PUMPING EQUIPMENT.**

80.1 A pump or pump base installed on a well must be constructed so no unprotected
80.2 openings exist into the interior of the pump or well casing.

80.3 [For text of item A, see M.R.]

80.4 B. A reciprocating pump rod must operate through a stuffing box, packing
80.5 gland, or other watertight and vermin-proof fitting.

80.6 C. An oil lubricated vertical turbine pump must not be installed in a well.

80.7 D. A water lubricated vertical turbine pump must be lubricated with water
80.8 from the well or a potable source.

80.9 **4725.3350 INTERCONNECTIONS AND CROSS CONNECTIONS.**

80.10 No connection between a well or boring and another well, boring, water supply
80.11 system, or contamination source is allowed unless the connection is:

80.12 A. protected by an air gap as described in part 4715.2010;

80.13 B. protected with a backflow prevention device as specified in parts 4715.2020
80.14 to 4715.2170;

80.15 C. protected with a backflow prevention device as specified in parts 1505.2100
80.16 to 1505.2800 if the well is an irrigation well used for chemigation; or

80.17 D. between wells or borings that meet the construction standards of this chapter,
80.18 are used for the same purpose, and have equivalent water quality.

80.19 This part does not apply to a water distribution system after the pressure tank;
80.20 however, this part does not exempt water distribution systems otherwise regulated by
80.21 chapter 4715.

80.22 **4725.3450 FLOWING WELL OR BORING.**

80.23 Subpart 1. **General construction; flowing well or boring.** A well or boring from
80.24 which groundwater flows above the established ground surface without pumping must
81.1 be constructed to prevent erosion of the aquifer and the confining layer. Casing must be
81.2 installed into the flowing aquifer to prevent water flowing up the outside of the casing.
81.3 The requirements in this part are in addition to other requirements of this chapter.

81.4 Subp. 1a. **Low flow and low pressure.** A flowing well or boring that flows 70
81.5 gallons per minute or less, and that has an artesian pressure ten pounds per square inch or
81.6 less, must be constructed by either:

81.7 A. drilling a bore hole larger than the casing into the flowing aquifer, installing
81.8 casing into the flowing aquifer, and grouting the annular space surrounding the casing with
81.9 neat-cement grout or cement-sand grout from the bottom of the casing to the base of the
81.10 pitless adapter or unit, or to the established ground surface according to part 4725.3050; or

81.11 B. driving steel casing with welded or threaded and coupled joints into the
81.12 flowing aquifer.

81.13 Subp. 2. **High flow, high pressure, or special construction area.**

81.14 A. A well or boring must be constructed according to the requirements in this
81.15 subpart when:

81.16 (1) the artesian flow rate at the established ground surface is greater than
81.17 70 gallons per minute;

81.18 (2) the artesian pressure at the established ground surface exceeds ten
81.19 pounds per square inch; or

81.20 (3) the commissioner designates an area where the use of standard
81.21 construction techniques have resulted in uncontrolled flows, or where hydrogeologic
81.22 conditions such as eroded or unstable confining layers require special construction to
81.23 successfully complete a well or boring and confine the artesian pressure.

81.24 B. A well or boring meeting the criteria in item A must be constructed by:

82.1 (1) installing an outer steel casing into, but not through, the confining layer
82.2 overlying the flowing aquifer, except that the outer casing may terminate in a competent
82.3 bedrock above the confining layer. The outer steel casing is not required to meet the
82.4 material specifications for casing in part 4725.2350 if the casing is of sufficient strength
82.5 to withstand the structural load imposed by conditions both inside and outside the well
82.6 or boring. The casing must be installed by drilling a bore hole a minimum of 3.0 inches
82.7 larger, or 3.5 inches larger for casings deeper than 100 feet and larger than 12 inches inside
82.8 diameter, than the outside diameter of the casing or couplings, whichever is larger, into
82.9 the confining layer overlying the flowing aquifer. The bore hole must not penetrate the
82.10 entire thickness of the confining layer. Steel casing must be installed into the confining
82.11 layer and neat-cement grout or cement-sand grout must be pumped into the annular space
82.12 surrounding the casing from the bottom of the casing to the established ground surface or
82.13 base of the pitless adapter or unit;

82.14 (2) drilling a bore hole a minimum of 3.0 inches larger, or 3.5 inches
82.15 larger for casings deeper than 100 feet and larger than 12 inches inside diameter, than
82.16 the outside diameter of the inner casing or couplings through the confining layer into
82.17 the flowing aquifer;

82.18 (3) installing an inner casing into the flowing aquifer in accordance with
82.19 part 4725.2250, subpart 8; and

82.20 (4) grouting the annular space surrounding the inner casing with
82.21 neat-cement grout or cement-sand grout from the bottom of the casing to the established
82.22 ground surface or base of the pitless adapter or unit.

82.23 Grouting must comply with part 4725.3050.

82.24 Subp. 3. [See repealer.]

82.25 [For text of subp 4, see M.R.]

83.1 Subp. 5. **Overflow discharge.** A water discharge from a flowing well or boring that
83.2 disposes of water to the surface, a surface water body, sewer, or subsurface must:

83.3 A. be protected with an air gap according to part 4715.2010;

83.4 B. have a valve or other mechanism as required in subpart 4 capable of stopping
83.5 all flow; and

83.6 C. have the outlet screened with a noncorrosive mesh screen having openings
83.7 of 1/16 inch or less.

83.8 Subp. 6. **Temporary wells and borings.** Temporary wells and borings that flow,
83.9 and are sealed within 30 days of the time construction begins, are not required to be
83.10 constructed according to this part, but must be constructed to prevent erosion of the
83.11 aquifer, drill hole, or surrounding property, and must be sealed to stop all flow with
83.12 neat-cement grout or cement-sand grout according to part 4725.3850.

83.13 **4725.3550 WELL LABEL.**

83.14 [For text of subpart 1, see M.R.]

83.15 Subp. 2. **Attachment.** The well identification label must be attached to the well
83.16 casing in a visible location using a stainless steel clamp, band, or strap. Alternatively, the
83.17 label may be attached to a concrete pump base or pedestal, or at-grade well vault using
83.18 screws or fasteners.

83.19 [For text of subps 3 and 4, see M.R.]

83.20 **4725.3650 REQUIREMENTS FOR DESIGNATED SPECIAL WELL AND**
83.21 **BORING CONSTRUCTION AREAS.**

83.22 Subpart 1. **Plan review.** When the commissioner designates an area where
83.23 contamination is detected as a special well and boring construction area, a well or boring
83.24 must not be constructed, repaired, or sealed until the commissioner has reviewed and
83.25 approved a proposed plan submitted by the installer. Sealing, repair, construction, and
84.1 location must comply with the approved plans. In addition to the information on the
84.2 permit or notification, the plan must include the:

84.3 A. depth;

84.4 B. location;

84.5 C. casing type, diameter, and depth;

84.6 D. method of construction, including grout materials and grout method;

84.7 E. pumping rate; and

84.8 F. use.

84.9 Subp. 2. **Water quality monitoring.** The commissioner may require water quality
84.10 monitoring by the property owner, well or boring owner, or other person in a designated
84.11 special construction area if the commissioner finds monitoring is needed to determine the
84.12 degree of contamination.

84.13 Subp. 3. **Additional requirements.** The commissioner may specify well and boring
84.14 location and construction requirements more stringent than those specified in this chapter
84.15 if the commissioner determines, based on an assessment of hydrogeologic conditions and
84.16 contaminant characteristics, that additional requirements are needed to protect the public
84.17 health or prevent degradation of the groundwater.

84.18 Subp. 4. **Water treatment.** The commissioner ~~may~~ shall require the owner of
84.19 a newly constructed contaminated well in a special well and boring construction area
84.20 to install, use, and monitor a an effective water treatment device if the commissioner
84.21 determines that the device is reasonably necessary to ensure a safe drinking water supply
84.22 or monitor the degree of contamination.

84.23 **4725.3725 CHEMICAL TREATMENT AND REHABILITATION.**

85.1 Subpart 1. **Treatment chemicals.** Chemicals placed in a well or boring to increase
85.2 the yield, remove or treat contaminants or objectionable tastes or odors, or rehabilitate the
85.3 well or boring must meet the requirements of ANSI/NSF Standard 60-2003e as determined
85.4 by a person accredited by the ANSI under ANSI Standard Z34.1-1993. Sodium or calcium
85.5 hypochlorite may be used if registered by the United States Environmental Protection
85.6 Agency according to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA),
85.7 section 3(c)(7)(A), as an antimicrobial pesticide for use in potable water. Treatment
85.8 chemicals must be neutralized or removed from the well, boring, and any connected
85.9 piping systems prior to use of the well or boring. This part does not apply to chlorine or
85.10 other treatment chemicals added to a water distribution system, or to a drilling additive
85.11 used according to part 4725.2950.

85.12 Subp. 2. **Treatment with an acid.**

85.13 A. Before treating a well or boring with an acid, all confined spaces enclosing
85.14 the well or boring must be blown out with fresh air before entry and a supply of fresh air
85.15 must be provided during occupancy. When there is a question of adequate fresh air supply,
85.16 a self-contained breathing apparatus must be worn.

85.17 B. The pH (hydrogen ion concentration) of the water must be measured prior to
85.18 treatment.

85.19 C. The well or boring must not be placed back into service until the pH is
85.20 within one pH unit of the pretreatment value.

85.21 **4725.3750 REPAIR, CORRECTION, OR SEALING OF WELLS AND BORINGS.**

85.22 Subpart 1. **Repair, correction, or sealing required.** The property owner must:

85.23 A. have a defective part of a well or boring repaired, including a broken,
85.24 punctured, or otherwise defective or unserviceable casing, screen, fixture, seal, connection,
85.25 cover, or cap;

86.1 B. eliminate injection or disposal of wastes, surface drainage, or flood water,
86.2 directly entering a well or boring; and

86.3 C. disconnect a cross-connection between a well or boring and a public water
86.4 system unless approved by the public water supplier and protected with an air gap or
86.5 backflow prevention device in accordance with parts 4715.2020 to 4715.2170.

86.6 A well or boring not repaired or corrected must be permanently sealed.

86.7 [For text of subp 2, see M.R.]

86.8 Subp. 3. **Casing removal.** When all casing is removed from a well or boring, the
86.9 installation of new casing or the reinstallation of casing is considered new construction and
86.10 must meet all the requirements of this chapter for new construction, including termination
86.11 of the casing at least 12 inches above the established ground surface, and compliance with
86.12 the applicable isolation distance requirements.

86.13 Subp. 4. [See repealer.]

86.14 Subp. 5. **Repair of noncomplying well or boring.** A noncomplying well or
86.15 boring constructed prior to July 15, 1974, may be repaired as long as the repair meets
86.16 the requirements of this chapter.

86.17 Subp. 6. **Casing extension on buried well or boring.** A well or environmental
86.18 bore hole with the upper termination of the casing buried below the established ground
86.19 surface must have the casing extended 12 inches above the ground surface when the well
86.20 or boring is uncovered.

86.21 **4725.3850 SEALING WELL OR BORING.**

86.22 Subpart 1. **Sealing required.** A well or boring, including an unsuccessful well or
86.23 boring, regardless of when constructed, that is not in use, and that has not been issued
86.24 a maintenance permit, or that is required to be sealed according to Minnesota Statutes,
87.1 section 103I.301, must be sealed according to this part by a contractor licensed or
87.2 registered according to this chapter.

87.3 Subp. 2. **Removal of obstruction; debris.** Materials, debris, and obstructions that
87.4 may interfere with sealing must be removed from the well or boring. Sand, aggregate, or
87.5 fill materials must be removed when sealing a well or boring, except that:

87.6 A. sand from a blasted and bailed sandstone formation may remain in a blasted
87.7 and bailed sandstone formation; and

87.8 B. sediment may remain in a well or boring if:

87.9 (1) the sediment is from the well or boring itself;

87.10 (2) the sediment is ten feet or less in thickness and is within ten feet of
87.11 the original bottom of the well or boring;

87.12 (3) the sediment does not contain hazardous materials or pollutants; and

87.13 (4) the sediment is not within a confining layer.

87.14 Subp. 3. **Casing grouting, removal, and perforation.** The open annular space
87.15 surrounding a casing must be grouted by:

87.16 A. filling the annular space with grout according to this part;

87.17 B. removing the casing and filling the well or boring with grout. If casing is
87.18 to be removed from a collapsing formation, grout must be inserted so that the bottom of
87.19 the casing remains submerged in grout; or

87.20 C. perforating or ripping the casing and forcing grout through the perforations.

87.21 Grouting must start within 24 hours of perforating. Perforations or rips must penetrate

87.22 the full thickness of the casings to be perforated or ripped. Casing to be perforated

87.23 or ripped must:

88.1 (1) be perforated with a minimum of one-half square inch of open area in
88.2 each foot of casing for casings 16 inches in diameter and smaller, and one square inch
88.3 of open area in each foot of casing for casings larger than 16 inches in diameter. No
88.4 perforation shall have an open area of less than one-eighth square inch;

88.5 (2) be perforated with a single hole at least two square inches in open
88.6 area in each five feet of casing; or

88.7 (3) be ripped a minimum of five feet for every 20 feet of casing.

88.8 Casing must be perforated or ripped through the entire length of a confining layer.

88.9 Casing is not required to be removed, perforated, or ripped if a single casing extends
88.10 less than 20 feet into the first bedrock encountered, and the bedrock is sandstone or
88.11 limestone, or the casing was driven through an unconsolidated formation, sandstone,
88.12 or shale.

88.13 Subp. 3a. **Sealing with grout, general requirements.** A well or boring must
88.14 be sealed by filling the well or boring, including an open annular space, with grout or
88.15 approved sealing materials to within two feet of the established ground surface or floor.
88.16 Grout must be pumped through a tremie pipe or the casing from the original bottom of the
88.17 well or boring upward. The bottom of the tremie pipe must be inserted to within ten feet
88.18 of the bottom of the well or boring, and remain submerged in grout while grouting.

88.19 Subp. 4. **Approved grout for sealing well or boring in unconsolidated materials.**
88.20 The portion of a well or boring in unconsolidated material must be filled with bentonite
88.21 grout, neat-cement grout, or cement-sand grout. The grout must be pumped through
88.22 a tremie pipe or the casing from the bottom of the well or boring upward to within two

88.23 feet of the established ground surface. Clean sand or cuttings equal to the volume of
88.24 bentonite grout may be mixed with the bentonite grout, or poured into the well or boring
88.25 while bentonite grout is pumped through a tremie pipe. The sand or cuttings must be
88.26 poured at a rate which prevents bridging.

89.1 Subp. 4a. **Alternative materials for sealing specified large diameter wells in**
89.2 **unconsolidated materials.** In addition to the grout materials approved in subpart 4, a well
89.3 or boring 16 inches or greater in inside diameter, less than 200 feet in depth, completed
89.4 in unconsolidated materials, and containing less than 20 feet of water may be sealed by
89.5 pouring at a rate sufficient to completely fill the well or boring without bridging:

89.6 A. uniformly mixed dry bentonite powder or granular bentonite and sand in a
89.7 ratio of one part bentonite by volume to five parts sand;

89.8 B. clean unconsolidated materials including clay, sandy clay, and silty clay with
89.9 a permeability of 10^{-6} centimeters per second or less;

89.10 C. concrete; or

89.11 D. granular, pelletized, or chipped bentonite not to exceed three-fourths inch in
89.12 diameter along with sufficient water to hydrate the bentonite.

89.13 Sealing materials must have bearing strength sufficient to prevent subsidence and
89.14 support traffic or building loads.

89.15 Subp. 5. **Approved grout for sealing well or boring in bedrock.** The portion of a
89.16 well or boring in bedrock must be sealed with neat-cement grout or cement-sand grout.

89.17 Subp. 5a. **Alternatives for grout loss in bedrock.**

89.18 A. The materials and methods described in item B are approved for sealing in
89.19 those uncased bedrock portions of a well or boring where the following conditions exist:

89.20 (1) a cavern more than twice the diameter of the bore hole;

89.21 (2) sandstone that is blasted and bailed; or

89.22 (3) the grout level fails to rise after insertion of more than one cubic yard of
89.23 grout or the quantity of grout necessary to fill ten vertical feet of hole.

90.1 B. The materials and methods in this item are approved in those portions of a
90.2 well or boring where the conditions in item A exist:

90.3 (1) pouring a mixture of gravel or stone aggregate not larger than one-half
90.4 inch in diameter while simultaneously pumping neat-cement grout or cement-sand grout
90.5 in a ratio not to exceed five parts aggregate to one part grout;

90.6 (2) pumping a mixture of gravel or stone aggregate not larger than one-half
90.7 inch in diameter and neat-cement grout or cement-sand grout in a ratio not to exceed five
90.8 parts gravel to one part Portland cement; or

90.9 (3) placing alternate, equal thickness layers of cement-sand grout or
90.10 neat-cement grout and gravel or stone aggregate not larger than one-half inch in diameter.
90.11 Neat-cement grout or cement-sand grout must be pumped through the casing or a tremie
90.12 pipe. The aggregate must be poured into the bore hole at a rate that prevents bridging.
90.13 Individual layers of aggregate must not exceed ten feet in thickness except in blasted
90.14 and bailed sandstone formations, where sand may be used to fill the entire portion of
90.15 the blasted and bailed sandstone. Aggregate must not be emplaced in a confining layer
90.16 or inside of casing.

90.17 Subp. 5b. **Alternative materials for sealing specified large diameter wells in**
90.18 **bedrock.** In addition to the grout materials approved in subpart 5, a well or boring 16
90.19 inches or greater in inside diameter, less than 200 feet in depth, completed in bedrock, and
90.20 containing less than 20 feet of water, may be sealed by pouring concrete at a rate sufficient
90.21 to completely fill the well or boring without bridging.

90.22 Subp. 6. [See repealer.]

90.23 Subp. 7. **Sealing flowing well or boring.** The discharge from a flowing well
90.24 or boring must be stopped and the well or boring sealed according to this part with
90.25 neat-cement grout or cement-sand grout. It is approved to use rapid-setting cement, or
90.26 to use hematite or barite as a weighting agent in a proportion not to exceed equal parts
91.1 weighting agent and Portland cement. When a well or boring cannot be sealed as described
91.2 in this part, the licensee or registrant must notify the commissioner.

91.3 Subp. 8. **Sealing disturbed.** The casing and grout seal must not be disturbed after a
91.4 well or boring is sealed, except that the casing may be cut off at the base of an excavation
91.5 encountering a sealed well or boring.

91.6 **4725.3875 RESPONSIBILITY FOR SEALING.**

91.7 Subpart 1. **Responsibility for sealing, general.** A property owner is responsible
91.8 for having a contractor licensed or registered in accordance with part 4725.0475 seal an
91.9 unused well or boring except in accordance with subparts 2 and 5.

91.10 Subp. 2. **Corrective work.** When a person, including a licensee or registrant seals a
91.11 well or boring in violation of these rules, the person is responsible for sealing the well
91.12 or boring in accordance with this chapter.

91.13 [For text of subp 3, see M.R.]

91.14 Subp. 4. **Unsuccessful or "test" well or boring.** An unsuccessful or "test" well
91.15 or boring must be sealed in accordance with part 4725.3850 by the licensee or registrant
91.16 who constructed the well or boring, unless the property owner has the well or boring
91.17 sealed by another licensed or registered contractor, or completes the well or boring and
91.18 places it in use.

91.19 Subp. 5. **Burial or building over an unsealed well or boring.** A person who
91.20 buries, or constructs a building over, an unsealed, unused well or boring is responsible for
91.21 having the well or boring sealed by a licensed or registered contractor.

91.22

WATER-SUPPLY WELLS91.23 **4725.4050 APPLICABILITY.**

92.1 Parts 4725.4050 to 4725.6050 are standards that apply to water-supply wells in
92.2 addition to the requirements in parts 4725.2010 to 4725.3875.

92.3 **4725.4150 BENTONITE DRILLING FLUIDS.**

92.4 Bentonite drilling fluids used to construct or repair a water-supply well must have a
92.5 measurable chlorine residual at all times during drilling or repair, except for a remedial
92.6 well where chlorine will interfere with water quality analysis or remediation.

92.7 **4725.4250 LIMESTONE OR DOLOMITE WATER-SUPPLY WELLS.**

92.8 Subpart 1. **Applicability.** This part applies to water-supply wells, including private
92.9 drinking water supply, public drinking water supply, irrigation, commercial, groundwater
92.10 thermal exchange, and remedial wells completed in or below limestone or dolomite. This
92.11 part does not apply to borings, monitoring wells, or dewatering wells.

92.12 Subp. 2. **Plastic casing.** Plastic casing must not be used as an outside casing
92.13 in a water-supply well cased more than five feet into limestone or dolomite bedrock,
92.14 except that an inner plastic casing may be installed entirely inside an outer steel casing in
92.15 accordance with part 4725.2250, subpart 8.

92.16 Subp. 3. **Bore hole size.** A casing that extends more than ten feet into limestone or
92.17 dolomite bedrock must be installed in a bore hole a minimum of 3.0 inches larger, or 3.5
92.18 inches larger for casings deeper than 100 feet and larger than 12 inches inside diameter,
92.19 than the outer diameter of the casing or couplings, whichever is larger.

92.20 Subp. 4. **Use of limestone or dolomite for potable supply.**

92.21 A. A water-supply well used to provide potable water must not be completed in
92.22 limestone or dolomite bedrock unless the limestone or dolomite bedrock is overlain by at
92.23 least 50 feet of unconsolidated material, sandstone, or shale that extends in all directions

92.24 around the well for a minimum one-mile radius. Limestone or dolomite bedrock includes
93.1 the Cedar Valley through Galena groups, Platteville formation, and the Prairie du Chien
93.2 group.

93.3 B. ~~The conditions in item A do not apply in an area designated on a limestone~~
93.4 ~~and dolomite bedrock well construction map published by the commissioner. The~~
93.5 ~~commissioner may establish maps in areas of known or suspected contamination, or~~
93.6 ~~unique hydrologic or geologic conditions, or in areas where protective conditions~~
93.7 ~~exist, including low permeability overlying materials, favorable groundwater gradients,~~
93.8 ~~or reduced contaminant loading in recharge areas. The commissioner may establish~~
93.9 limestone and dolomite bedrock well construction maps identifying areas of known
93.10 or suspected contamination, areas with unique hydrologic or geologic conditions, or
93.11 areas where protective conditions exist, including low permeability overlying materials,
93.12 favorable groundwater gradients, or reduced contaminant loading in recharge areas. The
93.13 conditions in item A do not apply in areas designated as approved for drilling on the
93.14 limestone and dolomite bedrock well construction maps published by the commissioner.

93.15 Subp. 5. **Water-supply well completed in limestone or dolomite.** Where a potable
93.16 water-supply well meeting the conditions of subpart 4 or a nonpotable water-supply well
93.17 is completed in limestone or dolomite bedrock, the following apply:

93.18 A. If the static water level in the well is more than ten feet above the limestone
93.19 or dolomite:

93.20 (1) steel casing must be installed into the limestone or dolomite by driving
93.21 the casing with a drive shoe through unconsolidated materials or sandstone into, but not
93.22 more than ten feet into, the limestone or dolomite; or

93.23 (2) a bore hole must be drilled into the limestone or dolomite and steel
93.24 casing installed to the bottom of the bore hole. If the bore hole extends more than ten feet
93.25 into the limestone or dolomite, the bore hole must be a minimum of 3.0 inches larger, or

93.26 3.5 inches larger for casings deeper than 100 feet and larger than 12 inches inside diameter,
94.1 than the outside diameter of the casing or couplings, whichever is larger. The annular
94.2 space surrounding the casing must be grouted from the bottom of the casing to the top of
94.3 the bedrock with neat-cement grout or cement-sand grout. The unconsolidated materials
94.4 portion of the annular space must be grouted according to part 4725.3050, subparts 1 to 3.

94.5 B. If the static water level in the well is less than ten feet above the limestone or
94.6 dolomite, a bore hole must be drilled a minimum of 3.0 inches larger, or 3.5 inches larger
94.7 for casings deeper than 100 feet and larger than 12 inches inside diameter, than the outside
94.8 diameter of the casing or couplings, whichever is larger. The bore hole must extend
94.9 a minimum of 20 feet below the static water level. Steel casing must be installed to the
94.10 bottom of the bore hole. The annular space from the bottom of the casing to the top of
94.11 bedrock must be filled with neat-cement grout or cement-sand grout. The unconsolidated
94.12 materials portion of the annular space must be grouted according to part 4725.3050,
94.13 subparts 1 to 3.

94.14 Subp. 6. **Water-supply well completed below limestone or dolomite.** A
94.15 water-supply well completed below limestone or dolomite where the conditions of subpart
94.16 4 apply must be constructed by drilling a bore hole a minimum of 3.0 inches larger, or 3.5
94.17 inches larger for casings deeper than 100 feet and larger than 12 inches inside diameter,
94.18 than the outside diameter of the casing or couplings a minimum of ten feet below the
94.19 limestone or dolomite, and a minimum of ten feet below the static water level. Steel
94.20 casing must be installed to the bottom of the bore hole, and the annular space from the
94.21 bottom of the casing to the top of bedrock must be filled with neat-cement grout or
94.22 cement-sand grout. The unconsolidated materials portion of the annular space must be
94.23 grouted according to part 4725.3050, subparts 1 to 3.

94.24 Subp. 7. **Remedial well in limestone or dolomite.** A remedial well is exempt from
94.25 the requirement in subpart 5 to extend the casing 20 feet below the static water level if the

94.26 well screen or open hole intersects the water table, the casing terminates no more than
95.1 ten feet above the static water level, and all casing installed in limestone or dolomite is
95.2 grouted with neat-cement grout or cement-sand grout.

95.3 **4725.4350 WATER-SUPPLY WELL DISTANCE FROM WATER BODIES;**
95.4 **PROTECTIONS IN FLOOD AREAS.**

95.5 Subpart 1. **Distance from water bodies.** The minimum horizontal distance between
95.6 a water-supply well and the ordinary high water level of a stream, river, pond, storm water
95.7 retention pond, or lake is 35 feet. The isolation distance does not apply to:

95.8 A. an area protected by a flood control structure accepted by the United States
95.9 Federal Emergency Management Agency (FEMA), as designated on a FEMA flood map;

95.10 B. a wetland, grassed waterway, depression, culvert, or ditch holding water less
95.11 than six months of the year; or

95.12 C. an artificial pond holding less than 5,000 gallons of water.

95.13 Subp. 2. **Flood protection.** A water-supply well must be constructed to prevent
95.14 the entry of flood water into the well by:

95.15 A. extending the casing at least five feet above the regional flood level;

95.16 B. installing a watertight seal and extending the casing ten feet above the
95.17 established ground surface, if the regional flood level is more than five feet above the
95.18 established ground surface;

95.19 C. installing an outer, neat-cement grouted protective casing in accordance with
95.20 part 4725.6755, subpart 2, item B, extending the protective casing and well casing a
95.21 minimum of two feet above the established ground surface, and installing a waterproof
95.22 threaded cap or a waterproof compression seal with drawbolts and a one-piece top plate
95.23 on both casings; or

96.1 D. extending the casing a minimum of two feet above the established ground
96.2 surface, installing a sealed spool, or flowing well pitless unit, and installing a waterproof,
96.3 nonvented compression seal.

96.4 The requirements in this subpart do not apply to a water-supply well located in an area
96.5 protected by a flood control structure accepted by the United States Federal Emergency
96.6 Management Agency (FEMA), as designated on a FEMA flood map.

96.7 **4725.4450 WATER-SUPPLY WELL DISTANCES FROM CONTAMINATION**
96.8 **SOURCE.**

96.9 Subpart 1. **Isolation distances.** A water-supply well must be located where there
96.10 is optimum surface drainage and at the highest practical elevation. Whenever possible,
96.11 water-supply wells should not be located down slope or down gradient of a contamination
96.12 source. A water-supply well must be constructed as far as practical from a contamination
96.13 source, but no less than the distances in this part.

96.14 The isolation distances in this part are minimum distances measured horizontally
96.15 from the closest part of the upper termination of the water-supply well casing to the closest
96.16 part of the contamination source, or the vertical projection of the contamination source on
96.17 the established ground surface, whichever is closer.

96.18 Where this chapter establishes a minimum regulatory volume of a liquid, the volume
96.19 of multiple tanks, each below the minimum, are not additive, unless the tanks are
96.20 interconnected without backflow protection.

96.21 The minimum isolation distances must be maintained between a new well and a
96.22 source of contamination no longer in use, unless all contaminants have been removed from
96.23 the source, and visibly contaminated soils have been removed.

96.24 A contamination source must not be placed, constructed, or installed any closer to a
96.25 water-supply well than the distances in this part.

96.26 A water-supply well must be no less than:

96.27 A. 300 feet from:

97.1 (1) the absorption area of a soil ~~treatment~~ dispersal system with an average
97.2 design flow greater than 10,000 gallons per day;

97.3 (2) a landfill or dump containing mixed municipal solid waste from
97.4 multiple persons, except for a disposal area of household solid waste from a single
97.5 residence regulated by item E, subitem (20);

97.6 (3) a permitted demolition debris landfill, except for a disposal area for
97.7 construction debris or demolition debris regulated by item E, subitem (19);

97.8 (4) a municipal or industrial wastewater rapid infiltration basin;

97.9 (5) a municipal wastewater stabilization pond with 500 or more
97.10 gallons/acre/day of leakage; and

97.11 (6) a liquid manure storage basin or lagoon that ~~does not have a concrete or~~
97.12 ~~composite liner~~ is unpermitted or noncertified according to chapter 7020;
97.13 except that the minimum distance to a sensitive water-supply well is increased for
97.14 subitems (1) to (6) to 600 feet as provided in subpart 2;

97.15 B. 150 feet from:

97.16 (1) a tank or container holding:

97.17 (a) ~~56~~ 25 gallons or more, or 100 pounds or more dry weight, of an
97.18 agricultural chemical, or an area used to fill or clean agricultural chemical application
97.19 equipment with these quantities, not protected with safeguards;

97.20 (b) 56 gallons or more, or 100 pounds or more dry weight, of a
97.21 hazardous substance not protected with safeguards; or

97.22 (c) 1,100 gallons or more of petroleum not protected with safeguards
97.23 as specified in chapter 7150 or 7151;

98.1 (2) the absorption area of a soil ~~treatment~~ dispersal system serving a facility
98.2 such as a hospital, nursing home, mortuary, veterinary clinic, health care clinic, or similar
98.3 facility handling infectious or pathological wastes, except as provided in item A, subitem
98.4 (1), and except that the minimum distance to a sensitive water-supply well is increased to
98.5 300 feet as provided in subpart 2;

98.6 (3) a municipal wastewater stabilization pond with less than 500
98.7 gallons/acre/day leakage, except that the minimum distance to a sensitive water-supply
98.8 well is increased to 300 feet as provided in subpart 2;

98.9 (4) an industrial wastewater stabilization pond, except that the minimum
98.10 distance to a sensitive water-supply well is increased to 300 feet as provided in subpart
98.11 2; ~~and~~

98.12 (5) a municipal or industrial wastewater spray irrigation area, except that
98.13 the minimum distance to a sensitive water-supply well is increased to 300 feet as provided
98.14 in subpart 2; and

98.15 (6) a liquid manure storage basin or lagoon that does not have a concrete or
98.16 composite liner, but has an earthen liner that was constructed under a Minnesota Pollution
98.17 Control Agency permit or is certified according to chapter 7020, except that the minimum
98.18 distance to a sensitive water-supply well is increased to 300 feet as provided in subpart 2;

98.19 C. 100 feet from:

98.20 (1) a solid manure storage area not covered by a roof, except that the
98.21 minimum distance to a sensitive water-supply well is increased to 200 feet as provided in
98.22 subpart 2;

98.23 (2) ~~a container holding 56 or more gallons, or 100 pounds dry weight, of an~~
98.24 agricultural chemical; safeguarded area used to store agricultural chemicals, or clean or fill
98.25 agricultural chemical application equipment that is protected with safeguards as defined

99.1 in parts 1505.3010 to 1505.3150 for bulk pesticides, or with safeguards as specified
99.2 in standards of the Department of Agriculture for fertilizers under parts 1510.0370 to
99.3 1510.0408 and Minnesota Statutes, chapter 18C;

99.4 (3) an underground storage tank holding 56 or more gallons, or 100 pounds
99.5 dry weight, of a hazardous substance, or with more than 1,100 gallons of petroleum, if
99.6 protected with safeguards as defined in chapter 7150;

99.7 (4) an aboveground storage tank with 56 or more gallons, or 100 pounds
99.8 dry weight, of a hazardous substance, or with more than 1,100 gallons of petroleum, if
99.9 protected with safeguards as defined in chapter 7151;

99.10 (5) a liquid manure storage basin or lagoon with a concrete or composite
99.11 liner in accordance with chapter 7020, except that the minimum distance to a sensitive
99.12 water-supply well is increased to 200 feet as provided in subpart 2;

99.13 (6) an unroofed animal feedlot holding 300 or more animal units, except
99.14 that the minimum distance to a sensitive water-supply well is increased to 200 feet as
99.15 provided in subpart 2;

99.16 (7) tanks, vessels, or components of a wastewater treatment unit; and

99.17 (8) a pipeline used to transport petroleum or crude oil to a petroleum
99.18 refinery or distribution center;

99.19 D. 75 feet from a cesspool, seepage pit, leaching pit, or dry well, except that the
99.20 minimum distance to a sensitive water-supply well is increased to 150 feet as provided in
99.21 subpart 2;

99.22 E. 50 feet from:

99.23 (1) ~~a tank or container holding 56 or more gallons, or 100 pounds or~~
99.24 ~~more dry weight, of agricultural chemicals~~ safeguarded area used to store agricultural
99.25 chemicals, or fill or clean agricultural chemical application equipment that is covered

100.1 with a permanent watertight roof and protected with safeguards as defined in parts
100.2 1505.3010 to 1505.3150 for bulk pesticides, or with safeguards as specified in standards
100.3 of the Department of Agriculture for fertilizers under parts 1510.0370 to 1510.0408 and
100.4 Minnesota Statutes, chapter 18C;

100.5 (2) an animal feedlot holding more than one animal unit, except as provided
100.6 in item C, subitem (6), and except that the minimum distance to a sensitive water-supply
100.7 well is increased to 100 feet as provided in subpart 2;

100.8 (3) a feeding or watering area within a pasture holding more than one
100.9 animal unit, except that the minimum distance to a sensitive water-supply well is increased
100.10 to 100 feet as provided in subpart 2;

100.11 (4) an animal or poultry building, including a horse riding arena, holding
100.12 more than one animal unit, except that the minimum distance to a sensitive water-supply
100.13 well is increased to 100 feet as provided in subpart 2;

100.14 (5) an interceptor, including a flammable waste or sediment interceptor;

100.15 (6) a human grave, mausoleum, or area used to bury more than one animal
100.16 unit;

100.17 (7) the absorption area of a soil ~~treatment~~ dispersal system except as
100.18 provided in items A, subitem (1), and B, subitem (2), or a privy, except that the minimum
100.19 distance to a sensitive water-supply well is increased to 100 feet as provided in subpart 2;

100.20 (8) a septic tank, sewage sump except as provided in item G, subitem
100.21 (1), watertight sewage treatment device except as provided in item C, subitem (7), or
100.22 watertight sewage holding tank;

100.23 (9) a buried storage tank holding between 56 and 1,100 gallons of
100.24 petroleum;

100.25 (10) an unused, unsealed well or boring;

- 101.1 (11) a source of pollution or contamination that may drain into the soil
101.2 except as provided in this part;
- 101.3 (12) a buried sewer, except as provided in item G, subitem (5), that:
- 101.4 (a) serves as a collector or municipal sewer;
- 101.5 (b) is open-jointed; or
- 101.6 (c) is constructed of materials that do not meet the specifications,
101.7 methods, and testing protocol in parts 4715.0530 and 4715.2820;
- 101.8 (13) a floor drain, grate, or trough connected to a buried sewer, except as
101.9 provided in item G, subitem (5);
- 101.10 (14) a watertight sand filter, peat filter, or constructed wetland;
- 101.11 (15) a storage area for bulk road deicing chemicals, except that the
101.12 minimum distance to a sensitive water-supply well is increased to 100 feet as provided in
101.13 subpart 2;
- 101.14 (16) the buried piping of a horizontal ground source closed loop heat
101.15 exchanger, except as provided in item H, subitem (2);
- 101.16 (17) a sewage, septage, or sludge, land-spreading area, except that the
101.17 minimum distance to a sensitive water-supply well is increased to 100 feet as provided in
101.18 subpart 2;
- 101.19 (18) buried piping from petroleum, agricultural chemical, or hazardous
101.20 material storage tanks;
- 101.21 (19) a disposal area for construction debris or demolition debris, except
101.22 that the minimum distance to a sensitive water-supply well is increased to 100 feet as
101.23 provided in subpart 2;

102.1 (20) a disposal area for household solid waste from a single residence,
102.2 except that the minimum distance to a sensitive water-supply well is increased to 100 feet
102.3 as provided in subpart 2;

102.4 (21) a solid waste transfer station, commercial compost site, or scrap yard;

102.5 (22) a disposal area for water treatment backwash, except that the minimum
102.6 distance to a sensitive water-supply well is increased to 100 feet as provided in subpart 2;

102.7 (23) an industrial cooling water pond, except that the minimum distance to
102.8 a sensitive water-supply well is increased to 100 feet as provided in subpart 2;

102.9 (24) a ~~grey-water disposal~~ gray-water dispersal area, except that the
102.10 minimum distance to a sensitive water-supply well is increased to 100 feet as provided in
102.11 subpart 2;

102.12 (25) an anhydrous ammonia tank;

102.13 (26) an animal rendering plant;

102.14 (27) multiple tanks or containers of agricultural chemicals, hazardous
102.15 materials, or hazardous wastes, for residential retail sale or use, each holding less than 56
102.16 gallons or 100 pounds dry weight, where the aggregate volume of the tanks and containers
102.17 exceeds 56 gallons or 100 pounds dry weight;

102.18 (28) a water treatment backwash holding basin, reclaim basin, or surge tank
102.19 with a direct sewer connection;

102.20 (29) a storage area for oil-filled electrical transformers; and

102.21 (30) an elevator boring, except as provided in item G, subitem (12);

102.22 F. 35 feet from:

102.23 (1) vertical heat exchanger piping as specified in parts 4725.0100, subpart
102.24 49g, and 4725.7050, subpart 1, item G; and

103.1 (2) the ordinary high water level of a stream, river, pond, storm water
103.2 retention pond, or lake as specified in part 4725.4350, subpart 1;

103.3 G. 20 feet from:

103.4 (1) a sewage sump with a capacity of less than 100 gallons which has been
103.5 successfully tested in accordance with part 4715.2820, subpart 2 or 3, and is constructed
103.6 according to part 4715.2440, subparts 1 and 4;

103.7 (2) a pit or unfilled space below the established ground surface that is four
103.8 feet or more in depth, except a basement or building crawl space;

103.9 (3) an in-ground swimming pool;

103.10 (4) a petroleum storage tank that is not buried, holding between 56 and
103.11 1,100 gallons;

103.12 (5) a buried sewer serving one building, or two or less single-family
103.13 residences, constructed of cast iron or plastic pipe according to the material specifications,
103.14 methods, and testing protocol described in parts 4715.0530 and 4715.2820, subpart 2 or 3,
103.15 or a floor drain connected to the buried sewer, except for:

103.16 (a) a collector or municipal sewer; or

103.17 (b) a sewer serving a facility such as a hospital, nursing home,
103.18 mortuary, veterinary clinic, health care clinic, or similar facility handling infectious or
103.19 pathological wastes;

103.20 (6) a storm water drain pipe eight inches or greater in diameter;

103.21 (7) an animal building, feedlot, confinement area, or kennel holding 0.1
103.22 to 1.0 animal unit, except that the minimum distance to a sensitive water-supply well is
103.23 increased to 40 feet as provided in subpart 2;

103.24 (8) a buried nonpressurized water supply cistern or reservoir;

- 104.1 (9) a gravel pocket or French drain for clear water drainage;
- 104.2 (10) a portable privy or toilet;
- 104.3 (11) a water treatment backwash holding basin, reclaim basin, or surge
- 104.4 tank, and associated piping, with a backflow protected sewer connection; and
- 104.5 (12) an elevator boring conforming to part 4725.7250; and

104.6 H. ten feet from:

- 104.7 (1) a frost-proof yard hydrant or discharge of a frost-proof hydrant draining
- 104.8 into the soil, a fire hydrant, or a flushing hydrant; and
- 104.9 (2) the horizontal piping of a vertical heat exchanger, or a horizontal
- 104.10 ground source closed loop heat exchanger constructed of materials, and using a heat
- 104.11 transfer fluid, according to part 4725.7050.

104.12 Subp. 2. **Increased isolation distances for sensitive water-supply wells.** The

104.13 distances in items A to F are exceptions to the isolation distances in subpart 1. The

104.14 isolation distances in subpart 1 are doubled between a sensitive water-supply well and

104.15 a contamination source directly entering the soil. A sensitive water-supply well must

104.16 be located at least:

104.17 A. 600 feet from the absorption area of a soil ~~treatment~~ dispersal system with an

104.18 average design flow greater than 10,000 gallons per day, a landfill or dump containing

104.19 mixed municipal solid waste from multiple persons, a permitted demolition debris landfill,

104.20 a municipal or industrial wastewater rapid infiltration basin, a municipal wastewater

104.21 stabilization pond with 500 or more gallons/acre/day leakage, or a liquid manure storage

104.22 basin or lagoon that ~~does not have a concrete or composite liner~~ is unpermitted or

104.23 noncertified according to chapter 7020;

104.24 B. 300 feet from the absorption area of a soil ~~treatment~~ dispersal system serving

104.25 a facility such as a hospital, nursing home, mortuary, veterinary clinic, health care clinic,

105.1 or similar facility handling infectious or pathological wastes; a municipal wastewater
105.2 stabilization pond with less than 500 gallons/acre/day leakage; an industrial wastewater
105.3 stabilization pond; ~~or a municipal or industrial wastewater spray irrigation area; or a liquid~~
105.4 manure storage basin or lagoon that does not have a concrete or composite liner, but has
105.5 an earthen liner that was constructed under a Minnesota Pollution Control Agency permit
105.6 or is certified according to chapter 7020;

105.7 C. 200 feet from a manure storage area, a liquid manure storage basin or lagoon
105.8 with a concrete or composite liner according to chapter 7020, or an unroofed animal
105.9 feedlot holding 300 or more animal units;

105.10 D. 150 feet from a cesspool, seepage pit, leaching pit, or dry well;

105.11 E. 100 feet from an animal feedlot holding more than one animal unit except
105.12 as provided in item C; an animal or poultry feeding or watering area within a pasture
105.13 holding more than one animal unit; an animal or poultry building including a horse riding
105.14 arena holding more than one animal unit; the absorption area of a soil ~~treatment~~ dispersal
105.15 system; a privy; a storage area for road deicing chemicals; a sewage, septage, sludge, or
105.16 waste landspreading area; a disposal area for construction or demolition debris; a disposal
105.17 area for household solid waste from a single residence; a disposal area for water treatment
105.18 backwash; an industrial cooling water pond; a ~~grey-water disposal~~ gray-water dispersal
105.19 area; or similar contamination source; and

105.20 F. 40 feet from an animal building, feedlot, confinement area, or kennel holding
105.21 0.1 to 1.0 animal unit.

105.22 Subp. 3. **Exception for irrigation well and fertilizer chemigation tank.** An
105.23 irrigation well used only for nonpotable purposes must be at least 20 feet from a
105.24 fertilizer chemigation supply tank conforming to the applicable requirements, setbacks,
105.25 safeguarding, antipollution devices, purging, and posting requirements of parts 1505.2100
105.26 to 1505.2800.

106.1 **4725.4650 SEDIMENT IN POTABLE WATER-SUPPLY WELLS.**

106.2 The following requirements apply to a new potable water-supply well.

106.3 A. A water-supply well must be developed to remove drilling fluid, native silts
106.4 and clays deposited during drilling, and the predetermined finer fraction of the natural
106.5 formation or the gravel pack.

106.6 B. A new water-supply well must not produce a sustained quantity of more than
106.7 five milligrams per liter (mg/l) of sand, or more than 200 mg/l of silt and clay as defined in
106.8 part 4725.1851, subpart 4, item A, for potable water at the design capacity of the well,
106.9 except when geological conditions preclude meeting the standard, and the well owner,
106.10 licensee, and commissioner agree to accept the sediment in a stipulated agreement.

106.11 **4725.4750 LEAD PROHIBITION IN POTABLE WATER-SUPPLY WELLS.**

106.12 Materials used in construction of a potable water-supply well that contact water
106.13 must not exceed eight percent lead except that solders and flux must not contain more
106.14 than 0.2 percent lead.

106.15 **4725.4825 NONPOTABLE WATER-SUPPLY WELLS.**

106.16 Subpart 1. **Construction.** A water-supply well used to provide water for nonpotable
106.17 purposes such as irrigation, heating and cooling, or industrial processing, that is not used
106.18 for purposes listed in part 4725.0100, subpart 35a, must be constructed according to parts
106.19 4725.2010 to 4725.5550, except parts 4725.4550, 4725.4650, and 4725.4750.

106.20 Subp. 2. **Interconnection prohibited.** A nonpotable well or water system must
106.21 not be interconnected with a potable well or water system except as provided in part
106.22 4725.3350.

106.23 Subp. 3. **Identification required.** A nonpotable well water system providing water
106.24 to a building with a potable water system, or accessible to the public, must be marked as
106.25 nonpotable according to part 4715.1910.

107.1 **4725.4850 WATER-SUPPLY WELL PITLESS ADAPTER OR PITLESS UNIT,**
107.2 **AND WELDED OR THREADED FITTING.**

107.3 Subpart 1. **Pitless adapter or pitless unit.** Except as provided in subpart 2, a
107.4 connection to a casing of a water-supply well made less than 12 inches above the
107.5 established ground surface must be made with a pitless adapter or pitless unit. The
107.6 connection must not be submerged in water at the time of installation. Native materials
107.7 must be packed tightly around the pitless adapter or pitless unit to the ground surface.
107.8 The pitless adapter or pitless unit must:

107.9 A. be constructed to provide complete clearance within the internal diameter
107.10 of the casing;

107.11 B. be designed to be field-welded by holding the welding rod in a vertical
107.12 or horizontal position, or bench-welded before field installation with a material as
107.13 corrosion-resistant as the parent material;

107.14 C. have all threaded joints watertight with no threads exposed;

107.15 D. impart no taste, odor, or toxic material to the water; and

107.16 E. connect to the casing by a threaded connection, welded connection, bolted
107.17 flange with gasket, clamp and gasket, or compression gasket.

107.18 A welded, solvent welded, or threaded coupling, adapter, or swaged fitting meeting
107.19 the material standards of part 4725.2350, 4725.2550, or 4725.6650 may be used to connect
107.20 a casing to a pitless adapter or unit.

107.21 Additionally, a pitless unit using a compression seal must provide for the well casing
107.22 to extend at least 2.5 inches into the throat of the pitless unit. The compression collar
107.23 must be held in place with corrosion-resistant bolts, nuts, and washers. The installer of a
107.24 clamp-on or weld-on pitless adapter must use a guide or template for cutting the hole in
107.25 the casing to accommodate the pitless adapter.

108.1 Subp. 2. **Welded or threaded fitting.** A welded or threaded fitting meeting the
108.2 requirements of part 4725.3150, subpart 2, may be connected to the side, cap, or cover of
108.3 a water-supply well casing and be used for venting, remediation, measurement of water
108.4 levels or testing, treatment, or for an electrical connection. A water discharge line must be
108.5 connected with a pitless unit or pitless adapter.

108.6 **4725.5250 WATER-SUPPLY WELL PUMP DISCHARGE LINES.**

108.7 A buried discharge line between a water-supply well casing and the pressure tank in
108.8 an installation, including a deep well turbine or a submersible pump, must not be under
108.9 negative pressure at any time. If a check valve is installed in a buried water line between
108.10 the well casing and the pressure tank, the water line between the well casing and the check
108.11 valve must meet the requirements of part 4725.5150 unless equipped with a vacuum
108.12 release or combination air release and vacuum release device located between the check
108.13 valve and the well. Pump discharge lines must be constructed of materials approved in
108.14 part 4725.5150, subpart 1.

108.15 **4725.5350 PRESSURE TANKS FOR WATER-SUPPLY WELLS.**

108.16 [For text of subpart 1, see M.R.]

108.17 Subp. 2. **Buried tanks.** A buried or partially buried pressure tank installed on a
108.18 water-supply well must:

108.19 [For text of item A, see M.R.]

108.20 B. have an interior coating that complies with ANSI/NSF Standard 61-2003e
108.21 if the tank has an interior coating in contact with water;

108.22 [For text of items C to E, see M.R.]

108.23 **4725.5450 VENTING WATER-SUPPLY WELLS.**

108.24 Subpart 1. **Venting exceptions.** A water-supply well must be vented unless the well:

109.1 A. is a flowing well;

- 109.2 B. casing is used as a suction pipe;
- 109.3 C. has a packer jet assembly;
- 109.4 D. is used as a remedial well; or
- 109.5 E. is constructed with a watertight seal in lieu of a casing extension as specified
- 109.6 in part 4725.4350, subpart 2.

109.7 Subp. 2. **Vent construction.** A well vent must:

- 109.8 A. be constructed of materials complying with parts 4725.2250 to 4725.2650,
- 109.9 or 4725.5150, subpart 1;
- 109.10 B. have watertight joints and terminate at least five feet above the regional flood
- 109.11 level unless provided with a watertight seal as specified in part 4725.4350, subpart 2;
- 109.12 C. terminate a minimum of 12 inches above the established ground surface or
- 109.13 the floor of a building as specified in part 4725.2175, except that a vent for a community
- 109.14 public water-supply well must terminate a minimum of 18 inches above the established
- 109.15 ground surface and the floor of a building as specified in part 4725.2175;
- 109.16 D. be screened with a noncorrosive mesh screen having openings of 1/16 inch
- 109.17 or less and pointed downward; and
- 109.18 E. be connected to the casing according to part 4725.4850.

109.19 Subp. 3. **Screened vents.** A screened vent incorporated into the underside of a

109.20 well cap or cover may be used.

109.21 [For text of subp 4, see M.R.]

109.22 **4725.5475 HYDROFRACTURING WATER-SUPPLY WELLS.**

109.23 Subpart 1. **Scope.** This part applies to hydrofracturing a water-supply well, as

109.24 defined in part 4725.0100, subpart 30f. A remedial water-supply well, or other well or

110.1 boring regulated by this chapter, must not be hydrofractured. Hydrofracturing must be
110.2 done by a well contractor licensed according to Minnesota Statutes, section 103I.525.

110.3 Subp. 2. **Injection materials, water, and proppants.**

110.4 A. Water used for hydrofracturing must be potable water containing a chlorine
110.5 residual. The use of surface water, unless obtained from a public water system, is
110.6 prohibited.

110.7 B. Additives must meet the requirements of ANSI/NSF Standard 60-2003e as
110.8 determined by a person accredited by the ANSI under ANSI Standard Z34.1-1993.

110.9 C. Proppants may be used to hold the joints and fractures open, and must be
110.10 inert, clean, and nontoxic materials, including chlorinated, noncalcareous, washed sand.

110.11 Subp. 3. **Restrictions.** The following restrictions apply when hydrofracturing.

110.12 A. The upper packer must be a minimum of 50 feet below the established
110.13 ground surface.

110.14 B. Hydrofracturing must not occur inside a casing. The upper packer must be a
110.15 minimum of ten feet below the lower termination of a casing.

110.16 C. Hydrofracturing must only be done in igneous or metamorphic bedrock.

110.17 D. A water-supply well must not be hydrofractured unless located according to
110.18 the isolation distances in parts 4725.4350 and 4725.4450.

110.19 Subp. 4. **Requirements.** The following requirements apply when hydrofracturing.
110.20 The person hydrofracturing must:

110.21 A. remove additives injected during hydrofracturing;

110.22 B. disinfect a hydrofractured water-supply well upon completion of
110.23 hydrofracturing, according to part 4725.5550;

111.1 C. collect a water sample from a hydrofractured water-supply well used for
111.2 drinking or other potable purposes, and test the sample according to part 4725.5650; and

111.3 D. complete and submit a well and boring construction record, or amended
111.4 record, within 30 days of completion of hydrofracturing.

111.5 **4725.5550 WATER-SUPPLY WELL DISINFECTION.**

111.6 Subpart 1. **Disinfection procedure.** A water-supply well must be disinfected
111.7 according to this part. A disinfection procedure is presumed adequate when one or more
111.8 water samples collected as specified in part 4725.5650 indicate the absence of total
111.9 coliform bacteria.

111.10 Subp. 2. **Disinfection of new well or pump.** A person installing a new well or
111.11 pump must ensure that the well is pumped until three volumes of the water contained in
111.12 the well are pumped or until the water is as clear as groundwater conditions allow. After
111.13 pumping, the person installing a new well or new pumping equipment must disinfect the
111.14 well and pumping equipment with chlorine at a concentration sufficient to produce at least
111.15 50 parts per million of free chlorine in all parts of the well. The chlorine solution must
111.16 contact the well surfaces above the static water level. The chlorine solution must remain
111.17 in the well at least two hours before pumping all the chlorinated water from the well and
111.18 the solution from the distribution system.

111.19 Subp. 3. **Disinfection during repair or modification.** A person repairing or
111.20 modifying a well or pump must disinfect the well as specified in subpart 2 or disinfect at
111.21 the start of the repair or reconditioning by applying chlorine at a concentration sufficient
111.22 to produce 200 parts per million free chlorine in all parts of the well for the period of the
111.23 well repair or reconditioning operation. Before taking water samples or returning the well
111.24 to use, all chlorinated water must be pumped from the well and distribution system.

111.25 Subp. 4. **Disinfection materials.** Chlorine materials must meet the requirements
111.26 of ANSI/NSF Standard 60-2000e as determined by a person accredited by ANSI

112.1 under ANSI Standard 234.1-1993 or be registered by the United States Environmental
112.2 Protection Agency according to the Federal Insecticide, Fungicide, and Rodenticide
112.3 Act (FIFRA), section 3(c)(7)(A), as an antimicrobial pesticide for use in potable water.
112.4 Chlorine compounds with additives such as perfumes or algaecides must not be used
112.5 for disinfection. An alternate disinfection material may be used if the material is a
112.6 biocide meeting the material and use standards of this part and provides biocidal activity
112.7 equivalent to the chlorine concentrations and contact times required in this part.

112.8 Subp. 5. **Chlorine in solid form.** Chlorine compounds in solid form used to
112.9 comply with subparts 2 and 3 must be dissolved in potable water prior to placement in a
112.10 water-supply well or circulated in the well to contact all well surfaces above the static
112.11 water level, except that:

112.12 A. additional solid chlorine in excess of that necessary to produce the free
112.13 chlorine required in subpart 2 or 3 may be added; and

112.14 B. solid chlorine may be used to disinfect a flowing well by placing the solid
112.15 in the bottom of the well.

112.16 Subp. 6. **Remedial well exemption.** The requirement to disinfect a water-supply
112.17 well does not apply to a remedial well if the disinfection will interfere with water quality
112.18 analysis or create dangerous reactions with contaminants.

112.19 **4725.5650 WATER QUALITY SAMPLES FROM NEWLY CONSTRUCTED**
112.20 **POTABLE WATER-SUPPLY WELL.**

112.21 Within 30 days of completion and before the use of a newly constructed potable
112.22 water-supply well, the person constructing the well must assure that a water sample is
112.23 collected from the well. A water sample is not required from a new pump installation in
112.24 an existing well, or a well repair, unless a notification must be submitted according to
112.25 part 4725.1820, item A.

113.1 A. The person constructing the well must inform the well owner that until
113.2 analysis of one or more water samples from the well indicates the absence of total coliform
113.3 bacteria, and the nitrate-nitrogen and arsenic analysis have been completed and reported,
113.4 the well must not be used for human consumption.

113.5 B. The person constructing the well must assure that water samples are properly
113.6 collected and submitted to a laboratory certified under parts 4740.2010 to 4740.2120.
113.7 The laboratory must be certified to analyze total coliform bacteria nitrate-nitrogen, and
113.8 arsenic, under the safe drinking water program test category. The laboratory reporting
113.9 limit must be no greater than 1.0 milligrams per liter for nitrate-nitrogen, and no greater
113.10 than 2.0 micrograms per liter for arsenic.

113.11 C. The sample must be analyzed for total coliform bacteria, arsenic, and
113.12 nitrate-nitrogen. The person constructing the well must assure that the property owner
113.13 and the commissioner receive a legible, reproducible copy of the analysis results within
113.14 30 days of analysis. The copy of analysis results sent to the commissioner must include
113.15 the unique well number, the property owner's name and address, and the dates of sample
113.16 collection and analysis.

113.17 D. If a water sample collected according to this part, or a water sample collected
113.18 by the commissioner from a newly constructed potable water-supply well indicates the
113.19 presence of total coliform bacteria, the person constructing the well is responsible for
113.20 actions needed to eliminate possible causes of total coliform bacteria, disinfect the well,
113.21 and resample for total coliform bacteria.

113.22 **4725.5750 DUG WATER-SUPPLY WELLS.**

113.23 Subpart 1. **Construction.** A dug well must be constructed to comply with all
113.24 requirements of this chapter including the materials, grouting, and casing standards.
113.25 Where geological conditions preclude the possibility of completing a water-supply well
113.26 with conventional drilling methods, materials, or casing, a variance may be granted under

114.1 part 4725.0410 to install a dug well for a residential water supply using unconventional
114.2 techniques or materials. A dug water-supply well may only be constructed in an
114.3 unconsolidated formation.

114.4 Subp. 2. **Cover.** A dug water-supply well must be protected with a cap or cover
114.5 meeting the requirements of part 4725.3150, subpart 1, or a precast, overlapping,
114.6 steel-reinforced, concrete cover at least four inches in thickness, or a locked, overlapping,
114.7 metal cover at least 3/16 inch in thickness. The junction of cover with the well casing
114.8 must be made with a watertight gasket and must be provided with a well vent according
114.9 to part 4725.5450.

114.10 Subp. 3. **Watertight openings.** A pump opening and a connection below the
114.11 established ground surface for a dug water-supply well must be made watertight according
114.12 to part 4725.4850, subpart 1, or with concrete or cement.

114.13 Subp. 4. **Location.** Unless a dug water-supply well is grouted from the surface to
114.14 a depth of 50 feet or through a confining layer, the well must be located according to
114.15 part 4725.4450, subpart 2.

114.16 **4725.5825 PUBLIC WATER-SUPPLY WELLS.**

114.17 Subpart 1. **Requirements.** In addition to the requirements of parts 4725.2010 to
114.18 4725.5650, a water-supply well used to provide water for a noncommunity or community
114.19 water system must comply with the requirements in subparts 2 to 6.

114.20 Subp. 2. **Notification of drilling required.** The licensee must notify the
114.21 commissioner of the proposed construction starting time of a community or noncommunity
114.22 public water-supply well 24 hours in advance of beginning construction. The information
114.23 may be placed on the notification form required in part 4725.1820 or may be reported by
114.24 telephone, facsimile, or in person. The notification must be made between the hours of
114.25 8:00 a.m. and 4:30 p.m. Monday through Friday, excluding holidays.

115.1 Subp. 3. **Additional disinfection or development required.** A public water-supply
115.2 well constructed in an unconsolidated formation using a rotary or other method that
115.3 creates an annular space and uses a bentonite drilling fluid, in addition to the disinfection
115.4 requirements of part 4725.5550, must be either:

115.5 A. disinfected upon completion of drilling and prior to grouting by placing a
115.6 minimum 200 mg/l free chlorine solution in the bottom of the well and circulating the
115.7 solution both inside the casing and in the annular space to the established ground surface
115.8 for a minimum of 30 minutes; or

115.9 B. developed by agitating and forcing water out of the screen for a minimum of
115.10 one hour.

115.11 Subp. 4. **Grouting required.** A public water-supply well constructed with a method
115.12 that creates an open annular space must be grouted as specified in part 4725.3050 from
115.13 within ten feet of the lower termination of the casing to the established ground surface or
115.14 base of the pitless adapter or unit. Casing may be driven according to part 4725.3050,
115.15 subpart 5.

115.16 Subp. 5. **Sampling faucet required.** A sampling faucet must be installed for each
115.17 new public water-supply well. The faucet must be:

115.18 A. metal;

115.19 B. installed a minimum of 12 inches above the established ground surface or
115.20 floor; and

115.21 C. installed before any treatment devices and between the well and water
115.22 storage.

115.23 Subp. 6. **Conversion to a public water-supply well.** A well, previously not
115.24 used as a public water-supply well, may be used as a noncommunity or community
115.25 public water-supply well only if the well meets the standards of this chapter. Plans and

116.1 specifications must be submitted to, and approved by, the commissioner prior to use as a
116.2 public water-supply well. This provision is not meant to be used for the construction of a
116.3 "test" well or environmental bore hole converted to a public water-supply well in order to
116.4 circumvent the notification, inspection, and plan approval requirements of this chapter.

116.5 **4725.5850 COMMUNITY PUBLIC WATER-SUPPLY WELLS.**

116.6 Subpart 1. **Requirements.** In addition to the requirements of parts 4725.2010 to
116.7 4725.5825, a public water-supply well used to provide water for a community water
116.8 system must comply with the requirements in subparts 1a to 8.

116.9 Subp. 1a. **Approval of plans and specifications.** A licensee must not construct
116.10 or materially alter a well, including adding or removing casing below the frost line for a
116.11 well providing water to a community water system, until plans and specifications have
116.12 been approved according to part 4720.0010.

116.13 Subp. 2. **Site approval.** A licensee must not construct a well for a community
116.14 public water system until the site has been approved by the commissioner.

116.15 Subp. 3. **Contamination sources.** A well for a community public water system must
116.16 be located according to the distances specified in parts 4725.2150, 4725.2185, 4725.4350,
116.17 and 4725.4450, but in no case less than 50 feet from a source of contamination except:

116.18 A. the minimum isolation distance is 20 feet for contamination sources listed in
116.19 part 4725.4450, subpart 1, item G, subitems (2), (3), (8), (9), (11), and (12);

116.20 B. the minimum isolation distance is 20 feet to an aboveground petroleum
116.21 storage tank holding less than 1,100 gallons used for emergency pumping of a community
116.22 public supply well if the petroleum storage tank is:

- 116.23 (1) located in a room or building separate from the community well; and
116.24 (2) is of double-wall construction with leak detection between the walls; or
116.25 (3) is protected with secondary containment according to part 7151.5400;

117.1 C. the minimum isolation distance is ten feet for contamination sources listed in
117.2 part 4725.4450, subpart 1, item H, subitem (1); and

117.3 D. there is no minimum distance to a pipe or conduit carrying only clear water
117.4 from a floor drain in a community well house to a gravel pocket or French drain.

117.5 Subp. 4. **Flood protection.**

117.6 A. The established ground surface at the well site must be at least two feet
117.7 above the highest known water elevation of a lake, pond, river, stream, or other body of
117.8 surface water, the waters of which at the highest level would approach to within 50 feet
117.9 measured horizontally of the well.

117.10 B. The established ground surface must be sloped to drain away from the well
117.11 and be graded to prevent the accumulation and retention of surface water within 50 feet of
117.12 the well. Filling must be protected from erosion by riprap or other suitable means.

117.13 Subp. 5. **Casing height.** The casing or casing extension must extend vertically at
117.14 least 12 inches above the established ground surface, floor, or slab according to part
117.15 4725.2250, subpart 11.

117.16 Subp. 6. **Casing vent.** Casing vents must be constructed in accordance with parts
117.17 4725.4850 and 4725.5450 and terminate a minimum of 18 inches above the established
117.18 ground surface or floor of a building as specified in part 4725.2175.

117.19 Subp. 7. **Property ownership or easement required.** The owner of a community
117.20 public water-supply well must own or legally control, through a permanent easement, the
117.21 property within a 50-foot radius of the well.

117.22 Subp. 8. **Radial water collectors.** Projection of radial water collectors must be in
117.23 areas and at depths approved by the commissioner.

117.24 A. The exact location of caisson construction joints and porthole assemblies
117.25 must be indicated on the submitted plans.

- 118.1 B. The caisson wall must be reinforced.
- 118.2 C. Procedures must be used that assure minimum vertical rise of the collectors.
- 118.3 D. The top of the caisson must be covered with a watertight floor.
- 118.4 E. Pump or other openings through the floor must have a minimum four-inch
118.5 high curbing.
- 118.6 F. Pump discharge piping must not be placed through the caisson walls.
- 118.7 G. There must be no construction joint within 15 feet of the established ground
118.8 surface.

118.9 **4725.6050 REMEDIAL WATER-SUPPLY WELLS.**

118.10 Subpart 1. **Additional requirements.** In addition to the general standards in parts
118.11 4725.2010 to 4725.3875, and the standards for water-supply wells, in parts 4725.4050 to
118.12 4725.5550, a remedial well must:

- 118.13 A. have spark arresters installed if petroleum products or other flammable or
118.14 explosive materials are present;
- 118.15 B. be equipped with a casing vent or collect and treat gases, if toxic or
118.16 flammable gases are present; and
- 118.17 C. have connections protected with an air gap or back flow prevention device as
118.18 specified in parts 4715.2010 to 4715.2170, if the well discharges to a sewer or surface
118.19 water.

118.20 Subp. 2. **Exemptions.** A remedial well is exempt from:

- 118.21 A. the distance from contamination source requirements in parts 4725.4350,
118.22 subpart 1, and 4725.4450;
- 118.23 B. the minimum protective depth requirements in part 4725.4550;

119.1 C. the requirement in part 4725.2250, subpart 11, to extend the casing 12 inches
119.2 above the established ground surface if the remedial well is constructed according to
119.3 part 4725.6850 for at-grade construction;

119.4 D. the requirement in part 4725.4250, subpart 5, to extend the casing 20 feet
119.5 below the static water level if the well screen or open hole intersects the water table,
119.6 the casing terminates no more than ten feet above the static water level, and all casing
119.7 installed in limestone or dolomite is grouted with neat-cement grout or cement-sand grout;

119.8 E. the venting requirements in part 4725.5450, except as provided in subpart
119.9 1, item B; and

119.10 F. the disinfection requirements in part 4725.5550 where disinfection will
119.11 interfere with water quality analysis or create dangerous reactions with contaminants.

119.12 Subp. 3. **Screen or open hole across an unconsolidated formation and bedrock**
119.13 **contact.** A remedial well that is constructed to remove contaminants from the water
119.14 surface by placing a screen or open hole across the contact of an unconsolidated formation
119.15 and bedrock is exempt from the requirements of part 4725.2020, subpart 1, if the screen
119.16 or open hole:

119.17 A. intersects the water surface of an unconfined aquifer;

119.18 B. does not penetrate a confining layer; and

119.19 C. does not extend more than 20 feet into bedrock.

119.20 Subp. 4. **Stainless steel casing.** A remedial well may be constructed with stainless
119.21 steel casing meeting ASTM Standard ~~A312/312M-04~~ A312/312M-04b, having at least
119.22 ANSI Schedule 5 for welded joints, and ANSI Schedule 40 for threaded joints.

119.23 **4725.6150 DEWATERING WELL.**

119.24 Subpart 1. **Scope.** This part applies to a dewatering well as defined in Minnesota
119.25 Statutes, section 103I.005, subdivision 4a. A dewatering well must be constructed,

120.1 repaired, maintained, and sealed in accordance with the general standards in parts
120.2 4725.2010 to 4725.3875, and the requirements of this part. A dewatering well must not
120.3 be used for a purpose other than dewatering. A dewatering well is exempt from the
120.4 provisions in parts 4725.4050 to 4725.6050.

120.5 [For text of subps 2 to 5, see M.R.]

120.6 Subp. 6. **Exceptions.** A dewatering well in an unconsolidated formation installed
120.7 for less than 18 months and less than 50 feet in depth may be constructed and sealed
120.8 according to the conditions and exemptions in items A to E.

120.9 A. Casing is not required to meet the standards of parts 4725.2350 to 4725.2650,
120.10 if the casing is water tight, free of oil or other contaminants, and withstands the forces
120.11 exerted on it during installation and removal.

120.12 B. The upper termination of the casing must be covered with a tamper-resistant
120.13 overlapping cover on the casing as specified in part 4725.2250, subpart 17. The casing is
120.14 not required to terminate at least 12 inches above the established ground surface if the
120.15 casing extends at least 12 inches above the working grade. The working grade is the
120.16 temporary elevation of the ground surface during a construction project.

120.17 C. The gravel pack must not extend more than ten feet above the static water
120.18 level.

120.19 D. The annular space is not required to be grouted to a depth of 50 feet
120.20 according to part 4725.3050, subpart 3, if the annular space is filled with cuttings taken
120.21 from the bore hole.

120.22 E. At 18 months after construction or sooner, the well must be sealed according
120.23 to this chapter. A dewatering well installed for 18 months or less, not encountering a
120.24 confining layer, less than 50 feet in depth, completed in an unconsolidated formation, and
120.25 that is not flowing, may be sealed according to part 4725.7450, subpart 4.

121.1 Subp. 7. **Special construction areas.** The commissioner may require additional
121.2 construction standards in special well and boring construction areas as described in part
121.3 4725.3650.

121.4 **4725.6450 APPLICABILITY AND USE.**

121.5 This part applies to monitoring wells as defined in Minnesota Statutes, section
121.6 103I.005, subdivision 14.

121.7 In addition to the general construction, repair, maintenance, and sealing requirements
121.8 in parts 4725.2010 to 4725.3875, a monitoring well must be constructed, repaired,
121.9 maintained, and sealed according to this part. A monitoring well is exempt from the
121.10 requirements in parts 4725.4050 to 4725.6050.

121.11 A monitoring well that is not in use must be sealed.

121.12 **4725.6650 CONSTRUCTION OF MONITORING WELLS.**

121.13 Subpart 1. **Casing.** Casing for a monitoring well must be steel or plastic casing
121.14 meeting the standards of parts 4725.2250 to 4725.2650, or stainless steel or flush threaded
121.15 polyvinyl chloride meeting the standards of this subpart.

121.16 A. A monitoring well may be constructed with flush threaded polyvinyl
121.17 chloride (PVC) casing if:

121.18 (1) the screen intersects the surface of the water table at the time of
121.19 installation and the well is constructed so the joint between the two deepest casing sections
121.20 is above the surface of the water;

121.21 (2) the total depth of the monitoring well is 50 feet or less;

121.22 (3) the monitoring well is completed in unconsolidated materials; and

121.23 (4) the flush threaded PVC casing used meets the standards of ASTM
121.24 F480-02, and the standards in Schedule 40 as referenced in ASTM Standard D1785-04.

122.1 B. A monitoring well may be constructed with stainless steel casing meeting
122.2 ASTM Standard ~~A312/A312M-04a~~ A312/A312M-04b, having at least ANSI Schedule 5
122.3 for welded joints and ANSI Schedule 40 for threaded joints.

122.4 Subp. 2. **Grouting of annular space.** The annular space of a monitoring well must
122.5 be grouted from ten feet or less above the screen or open bore hole to the established
122.6 ground surface according to part 4725.3050, except that no cuttings from the bore hole
122.7 must be added to the grout. Neat-cement or cement-sand grout may terminate at the base
122.8 of the manhole or vault for an at-grade installation.

122.9 [For text of subp 3, see M.R.]

122.10 Subp. 4. **Screen or open hole across an unconsolidated formation and bedrock**
122.11 **contact.** A monitoring well, that is constructed to monitor contaminants at the water
122.12 surface, by placing a screen or open hole across the contact of an unconsolidated formation
122.13 and bedrock according to part 4725.6050, subpart 3, is exempt from part 4725.2020,
122.14 subpart 1.

122.15 **4725.6755 PROTECTION OF MONITORING WELLS.**

122.16 Subpart 1. **Casing, protective casing, and capping.** The inner casing of a
122.17 monitoring well, and when installed, the protective outer casing as specified in subpart 2,
122.18 item B, with bentonite grout in the annular space, must be covered with a cap or cover
122.19 according to part 4725.2250, subpart 17. The protective outer casing may be covered with
122.20 an overlapping cap or cover without a compression gasket.

122.21 A. Either the inner casing or the protective outer casing must be closed with a
122.22 watertight, locked cap or a wrench-tightened, threaded metal cap.

122.23 B. The top of the well must be constructed to prevent entry of flood waters
122.24 according to part 4725.4350, subpart 2.

123.1 C. A monitoring well cased with plastic must be protected with an outer steel
123.2 protective casing as specified in subpart 2, item B.

123.3 Subp. 2. **Protection.** A monitoring well must be protected by:

123.4 A. surrounding the casing with a concrete pyramid or cone that has horizontal
123.5 dimensions of at least 24 inches by 24 inches at the established ground surface, that rises
123.6 12 inches above the established ground surface at the casing, and has a base with a mass
123.7 of at least three cubic feet below the established ground surface;

123.8 B. installing a steel outer casing meeting the material standards of part
123.9 4725.2350 that is at least 3.0 inches in diameter greater than the inner casing, that extends
123.10 at least two feet above and four feet below the established ground surface, and that has
123.11 bentonite grout, neat-cement grout, or cement-sand grout in the annular space between the
123.12 casings from the bottom of the outer casing to the established ground surface; or

123.13 C. placing three posts at least four inches square or four inches in diameter
123.14 around the well at equal distances from each other and two feet from the casing. The posts
123.15 must extend two feet above and four feet below the established ground surface or to
123.16 a depth of two feet if each post is set in concrete to a depth of two feet. The posts must
123.17 be made of reinforced concrete, decay-resistant wood, or ASTM Schedule 40 steel pipe
123.18 capped with an overlapping, threaded, welded steel or iron cap, or be filled with cement.

123.19 **4725.6850 AT-GRADE MONITORING WELL.**

123.20 [For text of subpart 1, see M.R.]

123.21 Subp. 2. **Termination location; map.** A monitoring well casing may terminate
123.22 at-grade only on a roadway, sidewalk, driveway, or a parking area. The location of the
123.23 well identified by unique well number must be marked on a scaled map with angles and
123.24 directions from surveyed property corners, a permanent benchmark, or the corners of a
123.25 permanent structure. The map must be submitted to the commissioner with the well record.

124.1 Subp. 3. **Construction.** An at-grade monitoring well must be constructed as
124.2 specified in this subpart.

124.3 [For text of items A to G, see M.R.]

124.4 H. The manhole cover or vault must meet AASHTO Standards H20-44 and
124.5 M306-04.

124.6 I. The well casing must be secured with a locking cap or cover according to
124.7 part 4725.2250, subpart 17. The manhole cover or vault must be secured with a lock
124.8 or tamper-resistant bolts.

124.9 [For text of item J, see M.R.]

124.10 **VERTICAL HEAT EXCHANGERS**

124.11 **4725.7050 VERTICAL HEAT EXCHANGERS.**

124.12 Subpart 1. **Construction.** A vertical heat exchanger must be constructed according
124.13 to the general construction standards in parts 4725.2010 to 4725.3875 and the provisions
124.14 in this part.

124.15 A. Vertical heat exchanger piping must be a minimum 160 psi pressure-rated,
124.16 SDR 11 high density polyethylene, meeting ASTM Standard D3035-03a.

124.17 B. Connections to vertical heat exchanger piping must use socket fusion or butt
124.18 fusion joining methods.

124.19 C. Vertical heat exchanger piping must be pressure tested with air or potable
124.20 water for 15 minutes at a pressure of 1.5 times the system operating pressure or 75 pounds
124.21 per square inch, whichever is greater, after installation in the bore hole.

124.22 D. The annular space between the vertical heat exchanger piping and the bore
124.23 hole must be grouted with neat-cement grout or cement-sand grout in bedrock, and
124.24 neat-cement grout, cement-sand grout, thermally enhanced bentonite grout, or bentonite

125.1 grout in unconsolidated materials according to the procedures in part 4725.3050, subpart
125.2 2. Thermally enhanced bentonite grout must consist of a fluid mixture of not more than
125.3 17.5 gallons of water, not more than 200 pounds of sand with 80 percent or more of the
125.4 sand smaller than 0.0117 inch (passing U.S. Sieve #50), and a minimum of 50 pounds of
125.5 bentonite.

125.6 E. Only food-grade or USP-grade propylene glycol must be used as heat
125.7 transfer fluid. No other materials or additives must be used except for potable water. A
125.8 permanent sign must be attached to the heat pump specifying that only approved heat
125.9 transfer fluids must be used.

125.10 F. Water make-up lines to the vertical heat exchanger must be protected with
125.11 backflow prevention according to parts 4715.2010 to 4715.2170.

125.12 G. A vertical heat exchanger constructed according to this part must be no
125.13 less than 35 feet from a water-supply well. The horizontal piping must be no less than
125.14 ten feet from a water-supply well.

125.15 [For text of subp 2, see M.R.]

125.16 **ELEVATOR BORINGS**

125.17 **4725.7250 ELEVATOR BORINGS.**

125.18 Subpart 1. **General.** An elevator boring must be constructed according to the
125.19 general construction standards in parts 4725.2010 to 4725.3875 and cased, sealed, and
125.20 maintained according to this chapter to prevent the vertical movement of water.

125.21 Subp. 2. **Casing.** The boring must be cased to the bottom of the excavation.

125.22 Subp. 3. **Exception.** The boring is exempt from the requirements in parts
125.23 4725.2150; 4725.2175; 4725.2185; 4725.2250, subpart 8, concerning extension of the
125.24 casing 12 inches above the established ground surface; and 4725.2250, subpart 11.

126.1 Subp. 4. **Hydraulic fluid leakage protection.** Hydraulic fluid must be protected
126.2 from leakage by:

126.3 A. attaching a watertight cap or plate to the bottom of the casing and
126.4 surrounding the casing with neat-cement or cement-sand grout. The grout must extend
126.5 at least three inches above and three inches below the bottom of the casing. The grout
126.6 must be inserted according to part 4725.3050, subpart 2;

126.7 B. grouting the inside of the casing with cement-sand grout or neat-cement
126.8 grout. The grout must extend at least two feet above the bottom of the casing and be
126.9 inserted according to part 4725.3050, subpart 2; or

126.10 C. encasing the hydraulic cylinder in a Schedule 30 plastic outer pipe or sleeve
126.11 with the bottom of the pipe or sleeve capped and the top extending above the pit floor.

126.12 Subp. 5. **Repair.** In addition to the requirements of part 4725.3750, when a
126.13 hydraulic cylinder is removed from an elevator boring for repair or replacement, the
126.14 boring must be protected from hydraulic fluid leakage according to subpart 4.

126.15 Subp. 6. **Sealing.** An elevator boring which is unsuccessful or no longer in use must
126.16 be sealed according to part 4725.3850. The hydraulic cylinder, debris or obstructions, and
126.17 sand placed around the hydraulic cylinder must be removed prior to sealing.

126.18 ENVIRONMENTAL BORE HOLES

126.19 4725.7450 ENVIRONMENTAL BORE HOLES.

126.20 Subpart 1. **Construction.** An environmental bore hole must be constructed,
126.21 repaired, maintained, and sealed according to the general standards in parts 4725.2010 to
126.22 4725.3875. In addition, an environmental bore hole that is cased must be constructed to
126.23 conform to the monitoring well requirements in parts 4725.6650 to 4725.6850.

126.24 [For text of subps 2 and 3, see M.R.]

127.1 Subp. 4. **Exception to sealing requirements.** An environmental bore hole less than
127.2 50 feet in depth, in an unconsolidated formation, and not encountering a confining layer
127.3 may be sealed by removing the casing and screen and allowing the bore hole to collapse,
127.4 except for a flowing boring which must meet the requirements of part 4725.3850.

127.5 A. The bore hole must not encounter pollution or contamination or have been
127.6 installed to detect pollution or contaminants.

127.7 B. The collapse must not be induced other than by removal of the screen
127.8 or casing.

127.9 C. The portion of the bore hole that does not collapse must be sealed
127.10 immediately upon removal of the casing as specified in part 4725.3850 with bentonite
127.11 grout, neat-cement grout, or cement-sand grout.

127.12 Subp. 5. **Screen or open hole across an unconsolidated formation and bedrock**
127.13 **contact.** An environmental bore hole may be constructed to test contaminants without
127.14 extracting water, or to vent, recover vapor, or sparge contaminants from the water surface,
127.15 by placing a screen or open hole across the contact of an unconsolidated formation and
127.16 bedrock according to part 4725.6050, subpart 3.

127.17 **TERM CHANGES.** The term "notification" shall be substituted for the term "notice" in
127.18 the headnote of part 4725.1837. The term "water-supply" shall be substituted for the term
127.19 "water supply" wherever it appears in parts 4725.4550, 4725.5050, and 4725.5150.

127.20 **REPEALER.** Minnesota Rules, parts 4725.0100, subparts 30a, 41c, 42, and 46;
127.21 4725.2020, subparts 2 and 3; 4725.2150, subpart 2; 4725.2450; 4725.3450, subpart 3;
127.22 4725.3750, subpart 4; 4725.3850, subpart 6; 4725.4950; and 4725.5675, are repealed.
