

1 Department of Revenue

2

3 Proposed Permanent Rules Relating to the Valuation and

4 Assessment of Utilities

5

6 Rules as Proposed

7 8100.0200 INTRODUCTION.

8 The commissioner of revenue will estimate the valuation of
9 the entire system of a utility company operating within the
10 state. The entire system will be valued as a unit instead of
11 valuing the component parts, utilizing data relating to the cost
12 of the property and the earnings of the company owning or
13 operating the property. The resulting valuation will be
14 allocated or assigned to each state in which the utility company
15 operates. Finally, by the process of apportionment, the portion
16 allocated to Minnesota will be distributed to the various taxing
17 districts within the state. Most of the data used in the
18 valuation, allocation, and apportionment process will be drawn
19 from reports submitted to the Department of Revenue by the
20 utility companies. These reports will include Minnesota
21 Department of Revenue Annual Utility Reports (UTL forms),
22 Reports to the Minnesota Public Utilities Commission, Annual
23 Reports to Shareholders, Annual Reports to the Federal Energy
24 Regulatory Commission and Annual Reports to the Interstate
25 Commerce Commission. Periodic examinations of the supporting
26 data for these reports will be made by the Department of Revenue.

27 The methods, procedures, indicators of value,
28 capitalization rates, weighting percents, and allocation factors
29 will be used as described in parts 8100.0300 to 8100.0600 for
30 1990 and subsequent years.

31 As in all property valuations, the commissioner of revenue
32 reserves the right to exercise his or her judgment whenever the
33 circumstances of a valuation estimate dictate the need for it.

34 8100.0300 VALUATION.

35 [For text of subps 1 and 2, see M.R.]

1 Subp. 3. **Cost approach.** The cost factor to be considered
 2 in the utility valuation formula is the original cost less
 3 depreciation of the system plant, plus improvements to the
 4 system plant, plus the original cost of construction work in
 5 progress on the assessment date. The original cost of any
 6 leased operating property used by the utility must be reported
 7 to the commissioner in conjunction with the annual utility
 8 report. If the original cost of the leased operating property
 9 is not available, the commissioner shall make an estimate of the
 10 cost by capitalizing the lease payments. Depreciation will not
 11 be allowed on construction work in progress. Depreciation will
 12 be allowed as a deduction from cost in the amount allowed on the
 13 accounting records of the utility company, as such records are
 14 required to be maintained by the appropriate regulatory agency,
 15 except that depreciation may be reduced if available information
 16 indicates the amount deducted does not equal actual accrued
 17 depreciation when the current estimated remaining life is
 18 considered.

19 Depreciation, however, shall not exceed the prescribed
 20 percentage of cost: for electric companies, 20 percent; for gas
 21 distribution companies, 50 percent; and for pipeline companies,
 22 50 percent. If the amount of depreciation shown on the
 23 company's books exceeds these percentages, the company may
 24 deduct ~~40 percent of the excess for the assessment year 1990 and~~
 25 50 percent of the excess ~~for the assessment year 1991 and~~
 26 subsequent.

27 The cost indicator of value computed in accordance with
 28 this subpart will be weighted for each type of utility company
 29 as follows: electric companies, 85 percent; gas distribution
 30 companies, 75 percent; and pipeline companies, 75 percent.

31 The following example illustrates how the cost indicator of
 32 value would be computed for an electric company:

33	1. Utility Plant	\$200,000,000
34	2. Construction Work in Progress	\$ 5,500,000
35	3. Total Plant	\$205,500,000
36	4. Nondepreciable Plant	
37	(Land, Intangibles, C.W.I.P.)	\$ 17,500,000
38	5. Depreciable Plant	\$188,000,000
39	6. Book Depreciation	\$ 40,000,000

1	7.	Maximum Depreciation (20%)	\$ 37,600,000
2	8.	40% <u>50%</u> Excess Depreciation Allowance	\$ 960,000
3			\$ 1,200,000
4	9.	Total Allowable Depreciation	\$-38,560,000
5			\$ 38,800,000
6	10.	Total Cost Indicator of Value	\$166,940,000
7			\$166,700,000

[For text of subps 4 to 8, see M.R.]

10 8100.0700 EQUALIZATION.

11 Subpart 1. In general. After the apportionment of value
 12 referred to in part 8100.0600 has been made, the values of
 13 structures valued by the commissioner must be equalized to
 14 coincide with the assessment levels of commercial and industrial
 15 property within each respective county receiving a share of the
 16 apportioned utilities value. This equalization will be
 17 accomplished through the use of an assessment/sales ratio.

18 Subp. 2. Assessment/sales ratio computation. A
 19 comprehensive assessment/sales ratio study compiled annually by
 20 the sales ratio section of the Local Government Services
 21 Division of the Department of Revenue will be used in this
 22 computation. The portions of this study which will be used for
 23 purposes of this part are known as the "County Commercial and
 24 Industrial Sales Ratio."

25 This commercial and industrial (C & I) sales ratio is
 26 computed through an analysis of the certificates of real estate
 27 value filed by the buyers or sellers of commercial or industrial
 28 property within each county. The information contained on these
 29 certificates of real estate value is compiled pursuant to
 30 requests, standards, and methods set forth by the Minnesota
 31 Department of Revenue acting upon recommendations of the
 32 Minnesota Legislature. The most recent C & I study available
 33 will be used for purposes of this part.

34 The median C & I sales ratio from this County Commercial
 35 and Industrial Sales Ratio study will be used as a basis to
 36 estimate the current year C & I median ratio for each county.

37 The process used to estimate this current year median ratio
 38 will be as follows:

39 The State Board of Equalization abstract of market value

1 will be examined. The current estimated market value of
 2 commercial and industrial property within each county will be
 3 taken from this abstract. The amount of the value of new
 4 commercial and industrial construction ("new" meaning since the
 5 last assessment period), as well as the value of commercial and
 6 industrial property which has changed classification (for
 7 example, commercial to tax exempt property) will also be taken
 8 from the abstract. The value of new construction will then be
 9 deducted from the estimated market value, resulting in a net
 10 estimated current year market value for commercial and
 11 industrial property within the county. The value of commercial
 12 and industrial property which has changed classification will be
 13 deducted from the previous years estimated market value to
 14 arrive at a net estimated previous year market value for
 15 commercial and industrial property within the county. The net
 16 current year value will be compared to the net previous year's
 17 estimated market value for commercial and industrial property
 18 within the county and the difference between the two values
 19 noted. This difference will be divided by the previous year's
 20 net estimated market value for commercial and industrial
 21 property to find the percentage of increase, or decrease, in
 22 assessment level for each year. This percent of change will be
 23 applied to the most recent C & I median ratio to estimate the
 24 current year's C & I median ratio. An example of this
 25 calculation for a typical county is shown below.

26	<u>1990 E.M.V. for Commercial and</u>		
27	<u>Industrial Property</u>	<u>\$12,000,000</u>	
28	<u>Less: New Construction</u>	<u>1,500,000</u>	
29		-----	
30	<u>1990 Net E.M.V. for C & I property</u>		<u>\$ 10,500,000</u>
31			
32			
33	<u>1989 E.M.V. for C & I property</u>	<u>\$10,250,000</u>	
34	<u>Less: Classification changes</u>	<u>250,000</u>	
35		-----	
36	<u>1989 Net E.M.V. for C & I property</u>		<u>10,000,000</u>
37			
38			
39	<u>Difference 1989 vs 1990 E.M.V.</u>		<u>500,000</u>
40			
41			
42	<u>Percent of change (500,000/10,000,000)</u>		<u>5%</u>
43	<u>1989 Median C & I ratio</u>		<u>88%</u>
44	<u>1990 Estimated Median C & I ratio (88% x 105%)</u>		<u>92.4%</u>
45			
46			

1 This same calculation is performed for each Minnesota
 2 county. If there are five or fewer valid sales of commercial
 3 and industrial property within a county during the study period,
 4 these few sales are insufficient to form the basis for a
 5 meaningful C & I ratio. Therefore, the median assessment/sales
 6 ratio to be used for purposes of the example computation in this
 7 subpart will not be the median C & I ratio but will be the
 8 weighted median ratio of all property classes within the county
 9 for which a sales ratio is available. This weighted median
 10 ratio is computed in the same manner using the same procedures
 11 and standards as the C & I ratio. In addition, the example
 12 computation in this subpart will not be performed using the
 13 commercial and industrial estimated market value but will use
 14 the estimated market value for all property within the county.
 15 All other aspects of the calculations are identical except for
 16 this substitution.

<u>Class of Property</u>	<u>Amount of Value</u>	<u>Percent of Value</u>	<u>Median Ratio</u>	<u>Weighted Median Ratio</u>
<u>Residential</u>	<u>\$ 20,000,000</u>	<u>20%</u>	<u>86%</u>	<u>17.00%</u>
<u>Agricultural</u>	<u>55,000,000</u>	<u>55%</u>	<u>95%</u>	<u>52.25%</u>
<u>Seasonal - Recreational</u>	<u>5,000,000</u>	<u>5%</u>	<u>90%</u>	<u>4.50%</u>
<u>Commercial Industrial</u>	<u>20,000,000</u>	<u>20%</u>	<u>85%</u>	<u>17.00%</u>
<u>Total</u>	<u>\$100,000,000</u>	<u>100%</u>		<u>90.75%</u>

 27
 28 **Subp. 3. Application of the estimated current year median**
 29 **assessment/sales ratio.** After the estimated current year median
 30 ratio has been calculated under subpart 2, it is used to adjust
 31 the apportioned estimated market value of utility structures
 32 valued by the commissioner. The value of these structures is
 33 reduced by the difference between 95 percent and the median
 34 ratio as adjusted in subpart 2. This is done by subtracting the
 35 current year median ratio, as adjusted, from the 95 percent
 36 provided for in Minnesota Statutes, section 278.05, subdivision
 37 4, to arrive at an equalization factor. The estimated market
 38 value of utility structures is multiplied by the equalization
 39 factor to arrive at the reduction amount. The reduction amount
 40 is subtracted from the estimated market value of the utility
 41 structures to arrive at the equalized market value of

1 structures. In no instance will any adjustment be made if,
 2 after comparing the current year median sales ratio as adjusted
 3 to the assessment level of utility structures, the difference
 4 between the two is ten percent or less. An example of this
 5 adjustment is as follows:

	<u>County A</u>	<u>County B</u>
6		
7 <u>Estimated Level of Assessment for</u>		
8 <u>Utility Property*</u>	<u>100.00%</u>	<u>100.00%</u>
9 <u>95 percent provided for in</u>		
10 <u>Minnesota Statutes, section 278.05,</u>		
11 <u>subdivision 4</u>	<u>95.00%</u>	<u>95.00%</u>
12 <u>County Commercial/Industrial Sales Ratio</u>	<u>87.00%</u>	<u>93.00%</u>
13 <u>Equalization Factor</u>	<u>8.00%</u>	<u>0.00%</u>
14 <u>Estimated Market Value of Structures</u>	<u>1,000,000</u>	<u>1,000,000</u>
15 <u>Reduction in Value</u>	<u>80,000</u>	<u>0</u>
16	-----	-----
17 <u>Equalized Market Value of Structures</u>	<u>920,000</u>	<u>1,000,000**</u>
18	=====	=====

19
 20
 21 *For purposes of this example, assume that utility property is
 22 assessed at 100 percent of market value.

23 **No adjustment is made because the Estimated Current Year
 24 Median Sales Ratio is within ten percent of the assessment level
 25 of utility property.

26 All utilities operating within a particular county will be
 27 equalized at the same percentage. No adjustment for
 28 equalization will be made to machinery or personal property.

29 These equalized estimated market values of utility
 30 structures valued by the commissioner will be forwarded to the
 31 county assessor denoting specific utility companies and taxing
 32 districts together with personal property and machinery values
 33 pursuant to Minnesota Statutes.
