

Pollution Control Agency**Proposed Permanent Rules: State Disposal System Permits and Sewage Treatment Systems****7081.0020 DEFINITIONS.**

[For text of subparts 1 to 7, see Minnesota Rules]

Subp. 7a. SSTS with low impact to potable water. "SSTS with low impact to potable water" means an SSTS that is designated by an individual licensed by the Board of Architecture, Engineering, Land Surveying, Landscape Architecture, Geoscience, and Interior Design who has determined that the groundwater plume from a soil dispersal component:

A. is discharging into a surface water bordering the property the SSTS soil dispersal component is located on; and

B. is not discharging into the capture zone of any existing or potential water supply wells.

[For text of subpart 8, see Minnesota Rules]

7081.0040 STATE REGULATION.**Subpart 1. Agency regulation.**

[For text of item A, see Minnesota Rules]

~~B. The owner or owners of a single SSTS or a group of SSTS under common ownership must obtain an SDS permit from the agency according to chapter 7001 when all or part of proposed or existing soil dispersal components are within one-half mile of each other and the combined flow from all proposed and existing SSTS is greater than 10,000 gallons per day.~~ The owner or owners of an SSTS must obtain an SDS permit from the agency according to chapter 7001 when:

(1) a single proposed or existing soil dispersal area receives a flow greater than 10,000 gallons per day; or

(2) when all proposed and existing SSTS soil dispersal areas that are under common ownership and within one-half mile of each other have a combined flow greater than 10,000 gallons per day. Flow from an SSTS with low impact to potable water is not counted in this subitem.

[For text of item C, see Minnesota Rules]

D. If flow values, as determined according to part 7081.0110, are greater than 10,000 gallons per day but an SDS permit is not required because of subpart 1a, item B, flow measurement data generated for making that determination must be submitted to the commissioner for review before a local permit is issued. Information on all subsequent alterations to the flow must also be provided to the commissioner.

Subp. 1a. **Flow determination.** The owner or owner's agent must determine flow ~~in accordance with~~ according to this subpart to establish whether an SDS permit is required under subpart 1, item B.

A. For ~~proposed~~ new SSTS and expansions to existing SSTS, the flow must be determined according to item C.

B. For existing SSTS, except as provided under item D, the flow is determined ~~by the greater of:~~

(1) by calculating the average of the maximum measured daily flow for a consecutive seven-day period; or when the following measurements are recorded and used in the calculation:

(a) 90 consecutive daily flow measurements capturing the maximum use. Measurements must be corrected for occupancy or use according to Prescriptive Designs

and Design Guidance for Advanced Designers, incorporated by reference under part 7080.1550, subpart 2; and

(b) 40 additional, consecutive, weekly flow measurements validating that unit (a) captured the maximum use; or

(2) ~~the flow determined~~ according to item C.

7081.0130 FLOW AND WASTE CONCENTRATION DETERMINATION FOR OTHER ESTABLISHMENTS.

Subpart 1. **Method.** Design flows for other establishments are determined by methods ~~in item A or B~~ items A to C. Measured flow values must be used for design flows when they are higher than the estimated flow values from table I.

A. The design flow of sewage for ~~MSTS~~ SSTS serving other establishments is estimated using table I.

TABLE I

ESTIMATED DESIGN SEWAGE FLOW FROM OTHER ESTABLISHMENTS

(1) Dwelling units (also see outdoor Unit recreation)		Design flow (gal/day/unit)
(a) Hotel or luxury hotel	guest	55
	square foot	0.28
(b) Motel	guest	38

(7) Institutional

(a) Hospital*	bed	220
(b) Mental health hospital*	bed	147
(c) Prison or jail	inmate	140
(d) Nursing home, other adult congregate living	resident	125
(e) Other public institution	person	105
(f) School (no gym, no cafeteria, and no showers)	student	14
(g) School (with cafeteria, no gym and no showers)	student	18
(h) School (with cafeteria, gym, and showers)	student	27.5
(i) School (boarding)	student	95
(j) Church	seat	4
	add for each meal prepared	5
(k) Assembly hall	seat	4

(8) Miscellaneous

(a) Public lavatory	user	5
(b) Public shower	shower taken	11

* Waste other than sewage is only allowed to be discharged into the system if the waste is suitable to be discharged to groundwater.

(1) Unless otherwise noted in table I, the flow values do not include flows generated by employees. A flow value of 15 gallons per employee per eight-hour shift must be added to the flow amount. Design flow determination for establishments not listed in table I ~~shall~~ must be determined by the best available information and approved by the local unit of government.

(2) Flow for systems not designed for maximum, seven-day, daily use may be determined by averaging the estimated flow from table I for a consecutive seven-day period if flow equalization is used and approved by the local unit of government.

(3) Maximum daily flow calculated under this item must be used to determine septic tank size according to part 7080.1930.

B. The measured design flow of sewage for ~~MSTS~~ SSTS serving other establishments is ~~determined by averaging the~~ average of the maximum measured daily flows for a consecutive seven-day period ~~in which the establishment is at maximum capacity or use.~~ Measurements must be corrected for occupancy or use according to Prescriptive Designs and Design Guidance for Advanced Designers, incorporated by reference under part 7080.1550, subpart 2.

C. SSTS using the flow determination method from part 7081.0040, subpart 1a, item B, subitem (1), may expand based on those measurements according to the following:

(1) measured flow values may be used only for similar units;

(2) expansion above 25 percent of the total flow is not allowed unless the flow is remeasured or estimated values from table I are used; and

(3) measured flow values may not be used at any other facility.

[For text of subparts 1 to 3, see Minnesota Rules]

Subp. 4. **Compliance inspection; existing systems.**

[For text of item A, see Minnesota Rules]

B. The agency's inspection report form for existing SSTS, supplemented with any necessary or locally required supporting documentation, must be used for the existing system compliance inspections in subitems (1) to (4). Allowable supporting documentation includes tank integrity assessments made within the past three years and prior soil separation assessments.

(1) ~~A Tank integrity and safety compliance assessment~~ assessments must be completed by a licensed SSTS inspection, maintenance, installation, or service provider business or a qualified employee inspector with jurisdiction. ~~An existing~~ A compliant tank integrity and safety compliance assessment must be completed on an empty tank, through a maintenance hole when available, and is valid for three years unless a new evaluation is requested by the owner or owner's agent or is required according to local regulations.
