

62S.26 LOSS RATIO.

Subdivision 1. **Minimum loss ratio.** The minimum loss ratio must be at least 60 percent, calculated in a manner which provides for adequate reserving of the long-term care insurance risk. In evaluating the expected loss ratio, the commissioner shall give consideration to all relevant factors, including:

- (1) statistical credibility of incurred claims experience and earned premiums;
- (2) the period for which rates are computed to provide coverage;
- (3) experienced and projected trends;
- (4) concentration of experience within early policy duration;
- (5) expected claim fluctuation;
- (6) experience refunds, adjustments, or dividends;
- (7) renewability features;
- (8) all appropriate expense factors;
- (9) interest;
- (10) experimental nature of the coverage;
- (11) policy reserves;
- (12) mix of business by risk classification; and
- (13) product features such as long elimination periods, high deductibles, and high maximum limits.

Subd. 2. **Life insurance policies.** Subdivision 1 shall not apply to life insurance policies that accelerate benefits for long-term care. A life insurance policy that funds long-term care benefits entirely by accelerating the death benefit is considered to provide reasonable benefits in relation to premiums paid, if the policy complies with all of the following provisions:

- (1) the interest credited internally to determine cash value accumulations, including long-term care, if any, are guaranteed not to be less than the minimum guaranteed interest rate for cash value accumulations without long-term care set forth in the policy;
- (2) the portion of the policy that provides life insurance benefits meets the nonforfeiture requirements of section 61A.24;
- (3) the policy meets the disclosure requirements of sections 62S.09, 62S.10, and 62S.11;

(4) any policy illustration that meets the applicable requirements of the NAIC Life Insurance Illustrations Model Regulation; and

(5) an actuarial memorandum is filed with the commissioner that includes:

(i) a description of the basis on which the long-term care rates were determined;

(ii) a description of the basis for the reserves;

(iii) a summary of the type of policy, benefits, renewability, general marketing method, and limits on ages of issuance;

(iv) a description and a table of each actuarial assumption used. For expenses, an insurer must include percentage of premium dollars per policy and dollars per unit of benefits, if any;

(v) a description and a table of the anticipated policy reserves and additional reserves to be held in each future year for active lives;

(vi) the estimated average annual premium per policy and the average issue age;

(vii) a statement as to whether underwriting is performed at the time of application. The statement shall indicate whether underwriting is used and, if used, the statement shall include a description of the type or types of underwriting used, such as medical underwriting or functional assessment underwriting. Concerning a group policy, the statement shall indicate whether the enrollee or any dependent will be underwritten and when underwriting occurs; and

(viii) a description of the effect of the long-term care policy provision on the required premiums, nonforfeiture values, and reserves on the underlying life insurance policy, both for active lives and those in long-term care claim status.

Subd. 3. **Nonapplication.** This section does not apply to policies or certificates that are subject to sections 62S.021, 62S.081, and 62S.265, and that comply with those sections.
