

246.28 DIAGNOSTIC TESTS AND X-RAY EXAMINATIONS; REPORT.

The physical examination shall include a standard intradermal tuberculin test, a chest x-ray when the test is positive and additional special diagnostic tests for the detection of the presence of tuberculosis as shall be set up in rules of the state commissioner of health in cooperation with the commissioner of human services. The examination shall be made by a licensed physician and surgeon, who shall report in writing to the superintendent of the institution in which the employment is contemplated on a form set up by the Department of Human Services in cooperation with the state commissioner of health showing the presence or absence of tuberculosis infection and disease based upon the examination.
