121A.31 SAFETY REQUIREMENT GUIDELINES.

The department, in cooperation with the Minnesota Fire Marshal's Division, must develop guidelines for school lab safety. The guidelines shall include a list of safety requirements and an explanation of the minimum state and national laws, codes, and standards affecting school lab safety the Minnesota fire marshal considers necessary for schools to implement. The district superintendent shall ensure that every school lab within the district complies with the school lab safety requirements. Lack of funding is not an excuse for noncompliance.
